I have benefitted immensely from the comments I received in the course of presenting an earlier draft of this Article at faculty workshops hosted by the University of Connecticut School of Law, the University of Iowa College of Law and the University of Memphis School of Law, and at the 2010 Annual Meeting of the Law and Society Association. I am also grateful to Boston College Law School for so generously supporting my research. Finally, for their excellent editorial work on this Article, it gives me great pleasure to thank the Arizona State Law Journal and its team of editors, particularly Melissa Bogden, Sarah Olson, Masha Shmuckler and Jared Sutton.

## I. INTRODUCTION

The advent of the written constitution has given rise to an enduring tension in constitutional statecraft pitting constitutionalism against democracy.<sup>1</sup> Constitutionalism strikes a decidedly antagonistic posture toward democracy, restraining democracy by fastening handcuffs on its exercise and imposing limits on its expression. Where democracy celebrates the limitless horizons of collective action, constitutionalism takes a more skeptical view of popular movements, moderating its enthusiasm for active citizenship with careful vigilance for the dangers of majoritarianism. That is the very function of countermajoritarian constitutional concepts like bills of rights, judicial review and the separation of powers.

Democracy, in contrast, rejects this tyranny of the countermajoritarian minority and aspires to break free from the chains that constitutions shackle around it. For democracy, legitimacy flows neither from natural law nor moral truth but only from the freely given consent of the governed. The highest ambition of democracy is therefore to reflect civic preferences through majoritarian participatory politics.

Constitutional architects have constructed innovative constitutional devices to palliate the tension between constitutionalism and democracy. Their function is to insulate majoritarian popular will from judicial invalidation. Some of these devices confer upon legislatures the power to limit the scope of judicial review.<sup>2</sup> Others narrow the range of judicial

authority.<sup>3</sup> Still others have emerged organically in the course of the judicial process.<sup>4</sup> What unites all of them is their purpose: to signal to citizens that it is citizens themselves—and not the institutions of the state—who possess the sovereignty to chart the constitutional course of the state.

Perhaps no constitutional mechanism more mightily captures this power of sovereignty than the constitutional amendment procedures enshrined in a constitutional text.<sup>5</sup> Indeed, the authority to amend the constitution is the best democratic answer to the enduring tension in constitutional statecraft between constitutionalism and democracy because the rules governing constitutional amendment unmistakably resolve this tension in favor of democracy—by giving citizens the key to unlock their constitutional handcuffs.

But some modern constitutions have instead resolved this tension in favor of constitutionalism. Constitutional designers have, in both the civil and common law traditions, expressly designated certain constitutional provisions *unamendable*.<sup>6</sup> Unamendable constitutional provisions are

impervious to the constitutional amendment procedures enshrined within a constitutional text and immune to constitutional change even by the most compelling legislative and popular majorities. They are intended to last forever and to serve as an eternal constraint on the state and its citizens. Paradigmatic examples of unamendable constitutional provisions read, for example, that republicanism “shall not be a matter for constitutional amendment,”<sup>7</sup> amendments to federalism “shall be inadmissible,”<sup>8</sup> or that the secularism of the state “shall not be amended, nor shall [its] amendment be proposed.”<sup>9</sup> Let us call these provisions *entrenchment clauses*.<sup>10</sup>

Entrenchment, as I see it, serves three purposes. First, entrenchment clauses are deployed to preserve certain structural features of the state. For instance, an entrenchment clause may preserve federalism, republicanism, secularism or some other constitutional structure. I call this *preservative entrenchment*. Second, in addition to preserving an important element of the

REV. 35, 44 n.41 (2002) (discussing the theory of entrenchment). There exists, however, some ambiguity in the literature between an entrenchment clause and an entrenched clause. In my view, the best reading of these terms suggests that the former is the mechanism that entrenches the latter. But not all scholars agree. Compare Charles A. Kelbley, *Are There Limits to Constitutional Change? Rawls on Comprehensive Doctrines, Unconstitutional Amendments, and the Basis of Equality*, 72 FORDHAM L. REV. 269, 270–71 (2004) (same). In these pages, I will refer to entrenched clauses as entrenchment clauses in the interest of consistency. For a helpful discussion of the distinction between entrenched clauses and entrenchment clauses, see Jason Mazzone, *Unamendments*, 90 IOWA L. REV. 1747, 1818 (2005); Akhil Reed Amar, *Philadelphia Revisited: Amending the Constitution Outside Article V*, 55 U. CHI. L. REV. 1043, 1044 n.1 (1988); Frank I. Palmer, *Using Constitutional Realism to Identify the Complete Constitution: Lessons from an Unwritten Constitution*, 54 AM. J. COMP. L. 587, 609–10 (2006) (correctly distinguishing between the two types of clauses but using the term entrenching instead of entrenchment).

state, entrenchment may be used to transform the state by helping to paint a portrait of the state not as it is, but as it could be. This type of entrenchment clause guarantees a broad spectrum of rights and liberties that once were foreign to the state but now are new additions to its constitutional vocabulary. I call this *transformational entrenchment*. And third, an entrenchment clause may advance the cause of reconciliation between two or more previously warring factions which have joined together in peace to form a new or reconstructed state. This final type of entrenchment—which I call *reconciliatory entrenchment*—absolves members of these factions of prior wrongdoing and renounces all future claims to criminal or other penalties.

Although constitutional states avail themselves of entrenchment in the service of purposes that some may deem laudable,<sup>11</sup> entrenchment clauses nonetheless violate the fundamental promise of constitutionalism. They undermine the legitimacy of constitutionalism by throwing away the key to unlock the handcuffs that constitutions attach to the wrists of citizens. There is something therefore quite unsettling about entrenchment clauses. They deny citizens the democratic right to amend their own constitution and in so doing divest them of the basic sovereign rights of popular choice and continuing self-definition, all of which makes entrenchment clauses deeply troubling for democratic theory, and doubly troubling for democratic practice.

A constitution is a window into the soul of the citizenry, a mirror in which citizens should see themselves and their aspirations reflected, precisely because it is citizens themselves who should give continuing shape and content to their constitutional text. Entrenchment, in contrast, short-circuits this fundamental premise of the larger promise of constitutionalism. Constitutionalism—and its attendant constitutional amendment rules and other innovations designed to palliate the tension between constitutionalism and democracy—should preserve for citizens the powers of self-definition and redefinition that give democracy its meaning. Loughlin puts it well when he declares that a constitution is “not a segment of being but a process of becoming.”<sup>12</sup> Yet entrenchment presupposes the contrary: that the essence of a constitution must be frozen into permanence.

In Part II of this article, I will probe the theoretical foundations of entrenchment by unveiling a new theory to understand the varying degrees of constitutional permanence. I will also sketch the contours of democratic constitutionalism, paying particular attention to what I consider its fundamental promise of active citizenship. In Part III, I will move from theory to actuality, developing an original taxonomy of entrenchment clauses, beginning with preservative entrenchment, then moving onward to transformational and reconciliatory entrenchment. Part III will concurrently construct the case against entrenchment, acknowledging some instances in which entrenchment clauses may be useful to the design of new constitutional states, but arguing more broadly that entrenchment clauses undermine the participatory values that give constitutionalism its meaning. In Part IV, I will propose an alternative to entrenchment clauses that I call *the entrenchment simulator*. In contrast to entrenchment clauses that render their amendment a constitutional impossibility, the entrenchment simulator provides a promising alternative that both embraces the expressive function of entrenchment clauses and remains consistent with the promise of constitutionalism. Part V will close with a few concluding thoughts about the enduring tension between constitutionalism and democracy.

## II. CONSTITUTIONAL ENTRENCHMENT

Ordinarily, the text of a constitution is subject to evolving interpretations. This should come as no surprise insofar as a constitution is often drafted in expansive language whose terms, standing alone, can neither prescribe nor proscribe a particular course of action. Accordingly, the text undergoes a continual evolution in constitutional meaning manifesting itself as formal or informal interventions in the organic development of the constitution. These interventions, which either arrest or quicken the pace of constitutional change, take the form of constitutional amendments inscribed into the text of the constitution.<sup>13</sup>

Amending the constitution usually demands an extraordinary confluence and sequence of events launched by political institutions, traditionally either legislatures,<sup>14</sup> heads of state,<sup>15</sup> social forces like popular movements<sup>16</sup> or

Strauss, *Common Law Constitutional Interpretation*, 63 U. CHI. L. REV. 877, 884 (1996).

14. See, e.g., CONSTITUCIÓN DE LA REPÚBLICA DE CUBA [Constitution] ch. XV, art. 137

less obvious—though no less influential—coils of constitutional change like courts.<sup>17</sup> In the normal course of affairs, therefore, a constitution is susceptible to episodic revision consistent with the rules of constitutional amendment located in the constitutional text.

But not all constitutions are created equal. Some constitutional states enshrine constitutional provisions that are not subject to either regular or periodic amendment.<sup>18</sup> They are unamendable. By unamendable, I do not mean that constitutional provisions are practically or virtually unamendable as a result of particularly onerous amendment formulae.<sup>19</sup> I mean to identify these entrenched provisions quite literally as fully resistant to the constitutional amendment procedures outlined in the text of the constitution insofar as they may not ever be lawfully amended—even if citizens and legislators achieve the requisite majorities commanded by the constitution. To entrench a constitutional provision is therefore expressly to remove what that provision enshrines—for instance a legal principle, social or moral value, governmental structure or political rule—from the parameters of the customary constitutional field of play.

*A. Degrees of Permanence*

Entrenchment is a matter of both degree and kind.<sup>20</sup> There are different stages of entrenchment ranging in increasing rigidity from provisional to permanent entrenchment. Just as a constitutional provision may be entrenched, so too may a law. Conventional laws are subject to legislative revision or repeal in the regular legislative process by the default rule of simple majority. But a legislature may entrench a law by requiring special legislative majorities or other unconventional decision rules to amend or repeal it. By imposing a higher threshold for amending that entrenched law, the legislature sets it apart from conventional laws. Likewise, a similar distinction applies to constitutional provisions. Entrenching a constitutional provision is to require special procedures to amend or revise the content of that entrenched constitutional provision. Whereas a constitution may, as a default rule, require a special legislative or popular majority, or both, to amend one of its provisions, amending an entrenched constitutional provision would entail something qualitatively or quantitatively more than the default rule demands.

We may conceptualize entrenchment on a sliding scale of the type of legislative and/or popular majorities required to consummate a revision to an entrenched provision, be it a legislative or constitutional provision. At its core, then, entrenchment is a measure of permanence. Perhaps an illustration of the stages of entrenchment will help sharpen precisely what it means to say that there exist different degrees of entrenchment.

Let us therefore posit an ascending scale of entrenchment permanence consisting of five separate stations: (1) legislative non-entrenchment; (2) legislative entrenchment; (3) conventional constitutional entrenchment; (4) heightened constitutional entrenchment; and (5) indefinite constitutional entrenchment. Let us also stipulate that we find ourselves in a presidential system where the national bicameral legislature must pass laws by a

---

20. Although constitutional scholars do not discuss entrenchment in these terms, the notion of degrees of entrenchment is implicit in their work. *See, e.g.*, Lourens W. H. Ackermann, *The Legal Nature of the South African Constitutional Revolution*, 2004 N.Z. L. REV. 633, 645 (2004); Robert Kwame Ameh, *Doing Justice After Conflict: The Case for Ghana's National Reconciliation Commission*, 21 CAN. J.L. & SOC'Y 85, 101 (2006); Carlos E. Gonzalez, *Popular Sovereign Generated Versus Government Institution Generated Constitutional Norms: When Does a Constitutional Amendment Not Amend the Constitution?*, 80 WASH. U. L.Q. 127, 229 (2002); A. Leon Higginbotham, Jr. et al., *De Jure Housing Segregation in the United States and South Africa: The Difficult Pursuit for Racial Justice*, 1990 U. ILL. L. REV. 763, 783 n.77; Tayyab Mahmud, *Jurisprudence of Successful Treason: Coup d'Etat & Common Law*, 27 CORNELL INT'L L.J. 49, 60 (1994); Ariel Porat & Omri Yadlin, *Promoting Consensus in Society Through Deferred-Implementation Agreements*, 56 U. TORONTO L.J. 151, 176 (2006).

majority vote of both houses and in which the constitution may be amended by a supermajority of each house of the national legislature, as well as a majority of the subnational legislatures.<sup>21</sup>

Beginning at the lowest end of the scale, we find a conventional law on a conventional subject passed by the bicameral legislature. To revise or even to repeal this law would require nothing out of the ordinary: a conventional law passed by a majority of the bicameral legislature will suffice. We may refer to this lowest level as simply *legislative non-entrenchment*.

Next, the second station of least permanence is occupied by an unconventional law passed by a conventional legislature. The law is unconventional because the legislature deems its subject matter sufficiently important as to insist that any effort to revise the law must muster more than a simple majority of the bicameral legislature. Perhaps the law concerns something of peculiar historical significance to the nation. Given its importance, the law would be subject to higher threshold for amendment: a supermajority of the bicameral legislature. I refer to this second station as *legislative entrenchment*.

The third level of entrenchment in our sample sliding scale of permanence is a constitution. Let us posit that the drafters of this constitution, having had the foresight to prepare for the contingency that their constitution may require some modifications over the course of its duration, enshrined an amendment formula in the text of the document. The constitution stipulates that amending the constitution, perhaps to respond to changing social and political conditions, requires two conditions: the approval of a supermajority of the bicameral national legislature and the consent of a majority of the subnational legislatures. In my taxonomy, this third station is called *conventional constitutional entrenchment*.

What follows this third level of entrenchment is what we might consider a superconstitutional provision requiring even more exacting conditions for amendment. The drafters may have deemed certain constitutional provisions particularly noteworthy or vital to the design of the state, in which case they may have set those provisions apart from the other constitutional provisions. Perhaps the drafters of the constitution believed that the rules of executive selection were so deeply constitutive of the state as to warrant special solicitude in the text of the constitution. Imagine, therefore, that the

---

21. The number of stations in our sliding scale would of course vary from one jurisdiction to the next, depending on the structure of the legal order (namely whether it is presidential, parliamentary, semi-presidential or otherwise), the rules of constitutional modification enshrined in the text of the constitution, and on the profile of its constitutional hierarchy (specifically where sovereignty rests within each of these models, for instance in the legislature, judiciary, executive, elsewhere or some form of shared sovereignty).

founding drafters established a special rule to amend this particular constitutional provision. Instead of requiring a supermajority of the bicameral national legislature and a majority of the subnational legislatures, any amendment to this superconstitutional provision would demand the approval of a supermajority of both the national legislature and the subnational legislatures. This fourth station of entrenchment is conspicuously more rigorous than the third, and of course far more exigent than the two other foregoing stations. I call it *heightened constitutional entrenchment*.

This brings us to the fifth station in our ascending scale of entrenchment. As we intensify the degree of entrenchment from the first station through the fourth, the fifth and final station is permanence. Assume here that the founding drafters of the constitutional text were so convinced of the importance of a given constitutional provision that they chose to shield that provision from any future effort either to amend it or to remove it entirely from the constitution. Just as we can conceive that certain constitutional provisions that may be deemed of greater consequence than others, we may certainly conceive of constitutional provisions that are thought to be of such great consequence to the state as to warrant making them wholly immune to the amendment procedures enshrined in the constitutional text. These would include provisions that, in the view of the founding drafters, are special provisions which far surpass the solemnity of the superconstitutional provisions warranting heightened constitutional entrenchment. Perhaps the founding generation regarded certain constitutional structures, values or principles as so fundamental to the existence and identity of the state that they charted the unusual course of carving out a special class of unamendable constitutional provisions. What makes them special is that no measure of legislative or popular approval—not even unanimity among all institutions of the state in concert with the freely expressed wishes of the citizenry—would be sufficient ever to change these unamendable provisions. On our ascending scale of entrenchment, we might call this fifth and most uncompromising type of entrenchment *indefinite constitutional entrenchment*.

### B. *Entrenching Permanence*

My focus in these pages is just that: indefinite constitutional entrenchment, which I shall henceforth refer to simply as entrenchment. The notion of entrenchment raises fascinating questions about the purpose of constitutionalism—and also about its promise—and challenges us to think critically about the relationship between constitutionalism and democracy.

What is it about constitutions, for example, that gives them their force of reason? Does a constitution derive its legitimacy from liberal democratic principles, the consent of the governed, or should we revere a constitutional text because it displaces the seat of sovereignty from citizens to another more legitimate site? I suspect that the most compelling answer draws from each of these, and still other themes.<sup>22</sup>

Constitutionalism is an institution that at once celebrates and undermines democracy. On the one hand, constitutionalism is firmly rooted in popular will insofar as it aggregates and subsequently crystallizes the disparate needs, demands, and aspirations of citizens. But, on the other hand, insofar as it takes possession of the sovereignty of citizens, constitutionalism is an affront to the most basic principle of democracy: the power to define and redefine oneself and to shape and reshape the contours of the state.

Entrenchment, more than any other constitutional device, illustrates how constitutions undermine democracy. This of course begs the question: what is democracy? I am sympathetic to Samuel Issacharoff's definition: democracy refers to a system of self-government in which legitimate authority derives from the freely expressed will of citizens expressing their views either directly or indirectly.<sup>23</sup> I therefore adopt procedural democracy, in contrast to substantive democracy, as my baseline understanding of the concept. Procedural democracy concerns itself with the process by which citizens make decisions about their collective future as members of the state.<sup>24</sup> Substantive democracy concerns itself with the values that underpin the actual decisions that citizens make.<sup>25</sup> In this respect, the former orients itself toward the decisional input and the latter, the decisional output.<sup>26</sup> This was the very basis of John Hart Ely's process-based theory of democracy,<sup>27</sup> which, in my view, captures the essence of democratic legitimacy. Democracy and its attendant institutions demand that citizens be given every opportunity to participate in the procedures for settling on, and ultimately setting, the trajectory of the state.<sup>28</sup>

What underlies my view of constitutionalism is therefore that popular choice is a value worth defending. Popular choice may admittedly depart from the commonly cited substantive values of liberal democracy. But just as fairness, equality, and due process are first order values that are integral to modern civil society, popular choice should likewise occupy a privileged position because it is the very act of deliberation, reflection and ultimately choosing that gives democracy its meaning. Without choice and the right to exercise it, we detract from the purpose of joining together in the shared venture that is a community, be it a village, territory, nation or state.

Yet, procedural democracy on its own has proven to be an insufficiently strong basis upon which to stand up a new constitutional state.<sup>29</sup> Procedural democracy, to paraphrase Daniel Markovits, has had to bow to the mercy of the substantive values of democracy<sup>30</sup> and to accept that it is ill-equipped to address the needs of modernity. And perhaps with reason because the dangers of privileging process over substance are familiar to us all, and they serve as a frightening reminder that choice does not always produce righteous outcomes. We need only look to history, some of it alarmingly recent, for proof that citizens should not always be entrusted with the power of free choice because there is little assurance that they will act in the larger interests of justice and virtue. Nazism in Germany,<sup>31</sup> apartheid in South Africa<sup>32</sup> and Jim Crow laws in the United States<sup>33</sup> are but three vicious manifestations of majoritarianism.

32. See, e.g., P. ERIC LOUW, *THE RISE, FALL, AND LEGACY OF APARTHEID* (2004). In South Africa, the oppressive regime was in the minority and the oppressed peoples formed the majority. But the minority created political institutions, most notably the Tricameral Parliament, designed with special procedures to permit the minority to govern as the *de facto* majority over the *de jure* majority. See RICHARD SPITZ & MATTHEW CHASKALSON, *THE POLITICS OF TRANSITION: A HIDDEN HISTORY OF SOUTH AFRICA'S NEGOTIATED SETTLEMENT* 9 (2000).

33. See, e.g., MICHAEL J. KLARMAN, *FROM JIM CROW TO CIVIL RIGHTS: THE SUPREME COURT AND THE STRUGGLE FOR RACIAL EQUALITY* (2004).

That is precisely why constitutional drafters opt so wisely to restrict popular choice. By erecting barricades to guard against the menace of majoritarianism, constitutions and their attendant counter-majoritarian institutions aim to neutralize the dangers of majoritarianism, namely the popular predisposition to actualizing short-term preferences over long-term investments, the inclination toward concrete benefits over abstract ideals, and the subjugation of minority rights to majority will.<sup>34</sup> It is, therefore, one thing to hold in high esteem the value of democratic popular choice, but quite another to set it as the definitive standard against which other values are measured. This common practice—the subordination of process to substance—is now standard procedure in the task of constitutional design.<sup>35</sup> Citizens have become accustomed to—and if they have not, they should resign themselves to—restrictions on their capacity to choose their own course, both as individuals and as members of a community, because it is the only way to neutralize the self-interest that informs, and perhaps more accurately constrains, our choices. And so it makes eminent sense to limit the scope of popular choice.

But to fully deny citizens any form of popular choice in designing and redesigning their very own constitution is another matter altogether. And it is similarly qualitatively different from—and significantly more objectionable than—denying citizens the right to speak through their elected representatives on matters of everyday legislative affairs. In my taxonomy of degrees of entrenchment, this latter example would correspond to the second level of entrenchment, pursuant to which a legislature passes a law that can be amended or repealed only with a special majority of legislators. Legislative entrenchment, as it is called, as opposed to constitutional entrenchment, has given rise to an engaging exchange among constitutional scholars, some arguing that one legislature may bind a subsequent legislature and others arguing the contrary.<sup>36</sup> The contemporary debate derives from the foundational work of the great English constitutional theorist, Albert Venn Dicey, which has since been refined by his modern counterpart, H.L.A. Hart. Both Dicey and Hart help illuminate competing

notions of legislative sovereignty: the first incarnation of sovereignty granting a later Parliament the continuing sovereignty from which it may claim the right to overrule an earlier one; and the second placing Parliaments across the ages on an equal footing such that no one body may bind another.<sup>37</sup>

Whether an earlier legislature may bind a future legislature invokes significantly lower stakes than whether a prior body of citizens may irreversibly bind a subsequent body of citizens against its will. Citizens acting as constitutional amenders may undo legislative entrenchment, but legislative entrenchment should not trump constitutional amendment. Legislative entrenchment admittedly compromises sovereignty. But it is a secondary, and indeed lesser, form of sovereignty that we may call *mediated sovereignty*, which refers to the people themselves acting through their duly elected legislative delegates. In contrast, constitutional entrenchment goes much further. First, constitutional entrenchment does not compromise mediated sovereignty; it instead constrains direct sovereignty, which refers to the people themselves acting of their own volition in their own name, unfettered by the bureaucratic and political hurdles that representative democracy presents. It is therefore the purest form of sovereignty imaginable, the very apex of constitutional legitimacy and legitimate authority. Second, constitutional entrenchment does not stop at simply *compromising* that sovereignty, as one might characterize the consequence of legislative entrenchment. Constitutional entrenchment does something far more grave and much more severe than legislative entrenchment: it extinguishes sovereignty.

Constitutional entrenchment also runs contrary to the promise that constitutionalism augurs for citizens. Constitutionalism is an institution that should reflect how citizens see themselves and their state—precisely because it is citizens themselves who should breathe ongoing life and meaning into their constitution. A constitution is a constitution only if it retains for citizens the right to define and redefine themselves and their state as they deem best. If the constitution sequesters this fundamental right of self-definition from citizens, then a constitution cannot be what it is intended to be—a continuing autobiography, a project of discernment and an evolving self-portrait.

Some states strip their constitutional text of the very essence of constitutionalism. They entrench constitutional provisions against amendment, in so doing handcuffing the wrists of their citizens and leaving

them unable to escape their constitutional shackles. For that is precisely the effect of entrenchment on citizens: it transforms them from citizens into subjects, reminiscent of days long past when democracy was but a dream envisaged by heroic revolutionaries preparing to stand up against their imperial overlords. Mobilizing in pursuit of a new social charter to govern how to relate to the state, and how to engage with themselves, citizens birthed the radical notion of a text that would enshrine their rights and liberties against infringement by the state. But the text itself was not cast in iron. It was instead left open and receptive to social and political change—discrete or grand changes that would occur as a result of either organic evolution or deliberate revision—on the implicit if not explicit understanding that it was not, nor could ever be, the text itself that was sacred. What was understood to demand reverence as sacrosanct was instead the source of the text's legitimacy. And back then, as today, there is but one singular basis of legitimacy and of legitimate authority: popular choice.<sup>38</sup>

That is the core of constitutionalism. And entrenchment undermines that critical core of constitutionalism. As the emblematic embodiment of the repudiation of popular choice, entrenchment fails not because it freezes for some period of time a particular feature or features of the state<sup>39</sup>—that is, after all, a legitimate function of a constitution—but rather because entrenchment freezes a constitutional provision indefinitely.<sup>40</sup> Entrenchment suppresses popular choice to the detriment of citizenship and narrows the range of possibilities that citizens envision for themselves and their state. Entrenchment, as it exists in constitutional states around the world,<sup>41</sup> from the Americas to Africa, from Europe to Asia, works a devastating harm on the constitutional soul of citizens. For by shielding constitutional provisions against amendment, entrenchment takes possession of the fundamental civic right of self-definition that is an avenue into the meaning and virtue of democracy.

## III. POPULAR RETRENCHMENT

Entrenchment can take three forms. In this Part, I will illuminate and critique each of them in greater detail.<sup>42</sup> I will begin, first, with preservative entrenchment, which turns toward history to legitimize, and simultaneously to shield against amendment, a constitutional principle, value, structure or rule. I will then move to transformational entrenchment, which looks not backward to what the state once was, but instead casts its gaze forward to what the state could be, envisioning a new conception of the state that is given pride of place in the constitution. Finally, third, I will discuss reconciliatory entrenchment, whose purpose is to make peace possible between former rivals, conferring upon wrongdoers irrevocable amnesty for their transgressions. Each of the three types of entrenchment has its own political motivation and each, its own rate of success. Yet each is also subject to potent criticisms. Indeed, what all three forms of entrenchment have in common is their deleterious consequences on the constitutional culture of the state and the psyche of the citizenry. Constitutional entrenchment can breed only popular retrenchment and precipitate the decline of constructive public engagement in the project of democracy.

A. *Preservative Entrenchment*

The most basic type of entrenchment clause seeks to preserve something thought to be distinctive about, or fundamentally constitutive of, the state and its people. Preservative entrenchment aims to freeze a distinctly historical conception of the state, one that perhaps its founders had hoped forever to infuse into the governing model of civil society and to breathe eternally into the spirit of the citizenry. In this regard, preservative entrenchment looks backward into the past for direction to pilot the state into the future, much like the constitutional theory of originalism.<sup>43</sup> For just

---

42. I should preface my taxonomy with two points. First, I use these three forms of entrenchment as Weberian ideal types that are sufficiently distinguishable to strike instructive contrasts. One type of entrenchment does not foreclose another, for there must of necessity be some measure of overlap among them. Second, my entrenchment taxonomy applies only to the highest degree of entrenchment: indefinite constitutional entrenchment. Two other scholars have suggested their own respective entrenchment taxonomies but they apply to all degrees and kinds of entrenchment. See Anupam Chander, *Sovereignty, Referenda, and the Entrenchment of a United Kingdom Bill of Rights*, 101 YALE L.J. 457, 462–63 (1991) (positing two categories of entrenchment: absolute and procedural); Julian N. Eule, *Temporal Limits on the Legislative Mandate: Entrenchment and Retroactivity*, 1987 AM. B. FOUND. RES. J. 379, 384–85 (1987) (defining entrenchment according to four categories: absolute, procedural, transitory and preconditional).

43. See, e.g., DENNIS J. GOLDFORD, *THE AMERICAN CONSTITUTION AND THE DEBATE*

like originalism, preservative entrenchment is anchored in a rigid philosophy of constitutional interpretation pursuant to which entrenchment must be construed through the lens applied by its drafters irrespective of any intervening socio-political changes that may warrant departing from that founding vision.

Perhaps some examples may help illuminate precisely what I mean by preservative entrenchment. Consider first constitutional structures. Under the Brazilian Constitution, federalism may never be abolished.<sup>44</sup> The same is true of federalism in Germany.<sup>45</sup> Why, one might wonder, have these two countries made unamendable a constitutional arrangement like federalism? The answer comes in equal parts of history and necessity. At their constitutional creation, Brazil and Germany ventured, separately and at different times, in search of a structure that would allow diverse territories to unite under a single regime, and to do so in a democratic fashion.<sup>46</sup> Federalism was their answer, and remains to this day so fundamental to their identity that it is eternally preserved, both in recognition of its usefulness in sustaining internal peace among disparate subnational units and in homage to the wisdom of their respective founders.<sup>47</sup> In contrast, the converse constitutional structure finds itself entrenched in the Constitution

MALTZ, *RETHINKING CONSTITUTIONAL LAW: ORIGINALISM, INTERVENTIONISM, AND THE POLITICS OF JUDICIAL REVIEW* 20 (1994) (stating that “the most plausible defense of originalism rests on a single axiom: The framers of the Constitution had legitimate authority to make political decisions that would bind future governmental decisionmakers until superseded by judgments made through the process specified in the Constitution itself”).

47. The American, Australian and Canadian constitutions entrench provisions whose function is effectively to forever establish federalism by erecting barriers to its amendment. The constitutions enshrine rules ensuring the equitable representation of the subnational units in the national legislature. See U.S. CONST. art. V; Part VII of the Constitution Act, 1982, Schedule B to the Canada Act 1982, ch. 11, § 41(b) (U.K.); Commonwealth of Australia Constitution Act, 1900, ch. VIII, art. 128. These may not be changed without the consent of the subnational unit whose share of representation is changed, something to which, for practical purposes, no subnational unit is likely to consent. The United States Supreme Court has declared that this clause is “permanent and unalterable.” *Dodge v. Woolsey*, 59 U.S. 331, 348 (1856). One scholar has speculated quite persuasively on the founding motivation for drafting this clause. See Lee J. Strang, *The Clash of Rival and Incompatible Philosophical Traditions Within Constitutional Interpretation: Originalism Grounded in the Central Western Philosophical Tradition*, 28 *HARV. J.L. & PUB. POL’Y* 909, 960–61 (2005).

of Indonesia, which does not permit amendments to the unitary character of the state.<sup>48</sup>

Federalism and unitarism—examples of competing constitutional structures shielded from constitutional amendment—are only two of the more interesting nuances of preservative entrenchment. Let us now examine some more of those nuances.

The story of preservative entrenchment is largely a study in contrasting theories of the state. Understandably so, given that the very purpose of preserving what the founders deem to be, or hope will become, a distinguishable feature of the state is to make an unmistakable declaratory statement about what is most important to the state and its citizens as a collective bound together in common cause. Nowhere is this contrast more apparent than the binary choice facing constitutional states setting in opposition republicanism and monarchism.

Just as republican government has in the twentieth century become a popular constitutional structure to entrench against future amendment,<sup>49</sup> so too has monarchy persisted as a governing institution. Among the nations of the world enshrining republicanism, we may identify Cameroon,<sup>50</sup> the Dominican Republic,<sup>51</sup> Gabon,<sup>52</sup> France,<sup>53</sup> Italy,<sup>54</sup> Senegal<sup>55</sup> and Tunisia.<sup>56</sup> For their part, Bahrain,<sup>57</sup> Cambodia,<sup>58</sup> Kuwait,<sup>59</sup> Morocco<sup>60</sup> and Qatar<sup>61</sup> have taken the contrary approach, seeing fit to entrench the supremacy of the monarchy against amendment.

And while the debate pitting presidentialism, semi-presidentialism and parliamentarism endures in the world of emerging and developing nations,<sup>62</sup> some states see no need to entertain these discussions and therefore eliminate altogether the temptation ever to revisit this choice by eternalizing one or the other as the invariable structure of government. Under the constitutions of Chad,<sup>63</sup> East Timor<sup>64</sup> and Guinea,<sup>65</sup> the separation of powers is not subject to amendment, while Greece<sup>66</sup> has made its semi-presidential configuration unchangeable.

Quite apart from choosing whether to entrench constitutional structures like republicanism or monarchism, or presidentialism or parliamentarism, or even federalism, another common choice facing states predisposed to preservative entrenchment involves issues of territory or political theory. Begin first with territory, which some states expressly make unsusceptible to their constitutional amendment procedures. The constitutions of Burkina Faso,<sup>67</sup> Comoros,<sup>68</sup> Djibouti,<sup>69</sup> Equatorial Guinea<sup>70</sup> and Madagascar<sup>71</sup> leave no doubt about the inviolability of existing territorial borders insofar as they do not contemplate the possibility of ever amending those borders—not even pursuant to the constitutionally prescribed rules for amending the constitutional text.

Another example of preservative entrenchment is even more fascinating. Consider that most states usually accept that they and their citizens will grapple with whether and how to stitch the fabric of religion into the tapestry of the state. How should states, as the question is typically framed, govern the relationship between the faith or atheism of citizens and the administration of government? This is a terribly difficult question to answer from any perspective, whether anchored in moral philosophy, democratic theory, social justice, institutional design or otherwise. Some states have

therefore elected to preempt their internal struggles with these questions—or at least to settle the question initially so as to remove it from the purview of their continuing project of communal discernment—and have instead made an irrevocable choice either to fuse religion into the apparatus of the state or to exclude it entirely from the organs of government.

Case in point, the Afghan Constitution establishes Islam as the official religion of the state, and does so in a way that prevents Islam from ever being disestablished.<sup>72</sup> Algeria<sup>73</sup> and Iran<sup>74</sup> also fall within this category. In contrast, other states forbid religion and the state from intersecting in any way, committing the state to an uncompromising secularism that is entrenched in the constitutional text. Benin,<sup>75</sup> Burundi,<sup>76</sup> Portugal,<sup>77</sup> Tajikistan,<sup>78</sup> Togo<sup>79</sup> and Turkey<sup>80</sup> are prime examples of states taking this latter approach.

These are the high stakes involved in preservative entrenchment. In entrenching a theory of the state—federalist or unitary, presidential or parliamentary, republican or monarchy, religious or secular—constitutional designers hope to tie the hands of present and future citizens for two reasons. First, tying their hands harbors the state against pressures to conform either to the dominant social and political culture of the time. And second, it avoids, though also often preempts, debates and discussion concerning these controversial subjects. Preservative constitutional provisions therefore adopt a defensive posture toward both the constitutional text itself and the citizens of the state.

On the relationship between entrenchment and the constitutional text, other stakes stand in the balance. Insofar as the constitution exempts preservative constitutional provisions from the constitutional amendment procedures enshrined in the constitutional text, preservative entrenchment regards constitutional amendment procedures as a threat to the structures and values it entrenches—which is precisely why preservation expressly makes it impossible lawfully to amend the constitution in a manner

consistent with the constitutional text. To take such a hostile view of the constitutional text is to express disdain for the institution of written constitutionalism, for which the text generally stands as the highest authority in the legal order, and to manifest deep misgivings about the role of amending authority in liberal democracy.

Yet this betrays an uncomfortable inconsistency in the relationship between preservative entrenchment and the constitutional text. On the one hand, preservative entrenchment weakens the authority of the constitution by expressly derogating from its constitutional amendment procedures. On the other, the premise of preservative entrenchment is that the constitutional text is viewed with such reverence that citizens and the state will respect the constitution's avowed special solicitude for certain structures or values, whether republicanism or monarchism, federalism or unitarism, or otherwise. Therefore, although preservative entrenchment acknowledges the existence of internal and self-regulating constitutional amendment procedures, preservative entrenchment undermines those amending practices in the same breath when it declares that those amendment rules are useless in the face of entrenched provisions.

The immediate consequence of this incongruity is to establish a troubling hierarchy of constitutional provisions pursuant to which some parts of the constitutional text warrant greater deference than others. While it may seem plausible and indeed defensible to view a constitutional text as a collection of provisions of varying force and significance, this particular view of a constitution is imprudent. To regard a constitution as a mere compilation of individual provisions, each subject to a sliding scale of worth, is to devalue the constitutional text as a document whose constituent parts must be read together to give the larger whole its full meaning. There also exists a larger and more problematic consequence of the hierarchy of constitutional provisions resulting from the departure between text and entrenchment: the reasons or principles according to which some constitutional provisions are elevated above others may be neither apparent nor even logically sound to those bound by its terms.<sup>81</sup>

Far from suggesting that we cannot claim as a descriptive matter that one constitutional value or commitment may never predominate over another at any given time, the more modest, and uncontroversial, claim I am

---

81. It has been suggested that there may be no principled basis upon which to construct a hierarchy of constitutional values. *See, e.g.*, *Valley Forge Christian Coll. v. Am. United for Separation of Church and State*, 454 U.S. 464, 484 (1982). *But see* Walter F. Murphy, *An Ordering of Constitutional Values*, 53 S. CAL. L. REV. 703, 706 (1980) (arguing that there does exist a principled basis upon which to rank constitutional values).

advancing is that these preferences shift over time.<sup>82</sup> Without the knowledge of context and circumstance, there is no sound basis upon which to rest a constitutional hierarchy.<sup>83</sup> Ranking constitutional provisions by irretrievably bestowing extraordinary status on one over others is a perilous practice because it threatens to deplete the text of its intrinsic value as an institution whose authority applies equally, fairly and predictably to citizens and the state.

On the relationship between entrenchment and citizens, preservative entrenchment conveys the very contrary message that a constitution should express to its citizens. It declares to them that they are to be viewed with suspicion, that they cannot be trusted to adhere to founding constitutional principles without instituting defensive constitutional mechanisms designed to ensure their obedience. This sends not only an enfeebling message to citizens but it is moreover anchored in the incorrect, if not paternalistic, presupposition that the citizens of yesterday know better what is right for the present than the citizens of today themselves. Entrenchment tells citizens that constitutions must therefore protect the values of the past from the corrosive influences of the present by shielding constitutional provisions against the freely expressed wishes of those whose lives are governed by a text that is forever hoisted beyond their reach.

Of course, nothing is ever out of the hands of citizens. Citizens may at any time reassert their sovereign authority to draft a new constitution. This does not mean, however, that entrenchment is “an illusion” insofar as “[o]ne constituent body cannot make constitutional provisions that prevent a future constituent body from repealing the constitution, even where it introduces an express provision that purports to do this.”<sup>84</sup> Entrenchment is very real and has very real consequences for the lives of citizens. Still, citizens may always, when they so choose, step outside the existing constitutional structure to found a new constitutional arrangement for themselves. But this alternative to enduring a displeasing or offensive constitutional structure or value may be described only as radical. For by resorting to entrenchment to preserve constitutional structures and values, the founding charter leaves citizens with revolution as their only recourse if they ever wish to amend

their constitution—an unusually unsavory position that is a vast departure from normal constitutional conditions.

*B. Transformational Entrenchment*

While some constitutional states entrench provisions with an eye to preserving something about the past or present, other states employ entrenchment with a view to the future. In my taxonomy of entrenchment, this latter category of entrenchment is transformational. Transformational entrenchment endeavors to repudiate the past by setting the state on a new course and cementing that new vision into the character of the state and its people. When this new vision takes root in the constitution, it is likely to be more of an aspiration than a concretized reality because it is a vision that forms part of a forward-looking project typically deriving from a renovated constitution. Although the framers of a clause subject to transformational entrenchment cannot quite be certain of knowing the contours of what they are preserving, their intent is to shape what that future will be. And transformational entrenchment is their chosen vehicle.

A number of states—many of which fall into the predictable group of states we can appreciate would wish to turn the page on the tragic horrors of an earlier time in their history—engage in the project of social and political reconstruction by relying on entrenchment clauses to transform the state from its prior form into a new and more just incarnation. These clauses, their framers believe, will help set the new state in the right direction as it emerges from a troubled, and often troubling, past.

Constitutional designers hope that, seeing in the text of the constitution itself the public commitment to rehabilitating the evils of days gone by, citizens will rise above their divided past and prevail over the forces that would pull them back into the vortex of disunity, inequality, despotism or some combination of these. Such is the hope animating states subscribing enthusiastically to the possibilities of transformational entrenchment. At its core, then, transformational entrenchment reflects an ambition to push the state and its people away from the tragedies of yesterday toward the horizons of tomorrow in the spirit of liberal democratic values, principles and institutions that are today synonymous with democracy.

Bills of rights, positive and negative freedoms, and a fairer distribution of wealth—all of these have become the subject of transformational entrenchment in many nations of the world. For instance, the rebuilt Constitution of Bosnia and Herzegovina seeks to arrive at the state's new tomorrow by making all civil and political rights unamendable. All rights, including but not limited to the freedoms of expression, association,

thought, religion, and assembly are inviolable under the Bosnian and Herzegovinian Constitution.<sup>85</sup> That is quite a striking departure from its earlier days of intolerance and oppression.<sup>86</sup>

Several other countries have adopted a similar strategy of shielding all citizen rights from amendment as a response to a once, and often still, perilous social and political setting. Consider the Republic of the Congo, which makes unamendable its entire menu of civil, political, economic, social and cultural rights.<sup>87</sup> This is, again, an effort to break from the past.<sup>88</sup> The same is true of Moldova, where the constitution tells citizens that all of their fundamental rights and freedoms—like equality, access to justice, right to life, freedom of artistic expression, education, right to a healthy environment, right to petition—shall never be amended.<sup>89</sup> That is another example of a desire to start afresh.<sup>90</sup>

Consider also Namibia, which removes from the field of constitutional play such rights as assembly, association, due process, education, equality, free movement, human dignity, privacy, religious freedom and speech<sup>91</sup>—a bold attempt to effect a wholesale transformation of its prior regime.<sup>92</sup> Another instructive example is Romania, a country that emerged from the terror of communism.<sup>93</sup> It now shelters from amendment all fundamental rights and freedoms, namely the rights to life, privacy, conscience, expression, health, education, assembly, inheritance, and to strike.<sup>94</sup> As a final case in point, we may look to Ukraine, which prohibits amendments to all rights, including the rights to equality, life, privacy, thought, speech,

religion, political participation, assembly and labor.<sup>95</sup> Prior to that, one would have been hard pressed to find similar constitutional protections for Ukrainian citizens.<sup>96</sup>

But fundamental rights and freedoms are not the only types of constitutional provisions to have become entrenched within the larger transformational aspirations of constitutional states. Some states have entrenched very particular electoral rules in an effort to transform the state from a sanctuary for absolute rule into a citadel of democracy. These states, many of them newly democratic, have suffered untold losses, not only financial but also social and political, as a result of their seemingly unshakable predisposition to fall into the hands of despotic rulers whose interests are their own rather than those of citizens and the state itself.

The transformation from autocracy to freedom is neither quick nor ever painless, and both the state and its citizens must strain valiantly to make it work. Some, however, believe they have found the magic elixir to accelerate and assure this transition. For constitutional designers resolved to erect barriers against the return tide of tyranny, the apparent answer is to install radical measures into the constitution to mitigate against what has historically been, for them, the very real danger of imperialism and the costly risk of reverting to authoritarian rule.

That constitutional states often fix term limits for the chief executive should not come as a surprise. Indeed, many of the world's foremost democracies impose temporal ceilings on the initial duration and renewal of presidential service.<sup>97</sup> But for a constitutional state to make such a ceiling irrevocable is an entirely different matter insofar as it does more than simply set a period of time the executive head cannot exceed in office under the constitution. Entrenched term limits go well beyond that reasonable constitutional rule and further make that period of time constitutionally unchangeable, even if citizens and legislative majorities wish—and actually fulfill the constitutionally prescribed pre-conditions—to amend those terms of the constitution. This very kind of constitutional ban applies today in the Central African Republic,<sup>98</sup> El Salvador,<sup>99</sup> Guatemala,<sup>100</sup> Honduras<sup>101</sup> and Mauritania.<sup>102</sup>

There are of course reasons—compelling reasons, to be sure—why these and other states have made term limits unamendable. In the case of the Central African Republic, the presidential term limits were a direct response to the nation’s problematic history of military coups and mutinies, and also of the transparent efforts of rogue leaders to seize control of the state and never to cede the reigns of power. At last count, the Central African Republic had suffered through about one dozen coups since its independence in 1960—which helps explain the unamendable presidential term limits now in the new constitution of 2004.<sup>103</sup> For El Salvador, the goal was similar: to institute civilian control over the military and to create a functioning democracy.<sup>104</sup> The history of the nation, particularly prior to the new constitution of 1983, is replete with coups, free elections in name alone, and military rule of the bureaucracy.<sup>105</sup>

To make the rules of presidential tenure immutable was therefore to consummate quite a reversal from earlier years in the nation’s history when the country had called itself a democracy despite a consistent string of destabilizing coups which continued to betray the undemocratic, and volatile, bases of the state.<sup>106</sup> We find resonant echoes of the very same

106. TOMMIE SUE MONTGOMERY, REVOLUTION IN EL SALVADOR: FROM CIVIL STRIFE TO CIVIL PEACE 23–185 (1995). In addition to limiting the terms of office of its president, El Salvador also makes the legislature unmistakably more powerful than the president—another strategy of constitutional design to prevent abuses of executive power that have long

narrative in the logic that motivated other nations—particularly Guatemala,<sup>107</sup> Honduras<sup>108</sup> and Mauritania<sup>109</sup>—to enshrine unamendable presidential terms in their respective constitutions.

Whether transformational entrenchment achieves its purpose often turns on the intensity of the popular will behind the vision of the constitutional framers. Where the values of citizens align with the principles to which the framers bind them, it is more likely than not that the social transformation will come to fruition. For the consent of the governed is what gives constitutionalism its meaning and legitimacy—and also what makes it possible to join disparate peoples together in the common venture of creating and sustaining a constitutional polity. After all, a constitution is more than a simple legal document. It is, as has been written, a deed that “reflects the triumphs and disappointments of a nation’s past and embodies its hopes for the future.”<sup>110</sup> The constitutional text should speak to all citizens, whatever their divergent paths to citizenship, and it should invite them to shape the text and its meaning commensurate with their evolving ambition and aspirations.

But to arrest the evolutionary process that is constitutive of constitutional statehood is to shut citizens out of their project of constitutionalism. For when the framers of the past are seen as imposing moral and political standards that conflict with those underpinning how citizens of the now see themselves and their state, the odds of sustaining the momentum toward social transformation are unappetizing and insurmountable. And that is the great hazard that confronts social engineers who rely on transformational entrenchment.

Quite apart from the dissonance between the political preferences of framers long past and those of citizens living in the present day, transformational entrenchment raises more substantial and immediate risks in the context of electoral rules enshrined to smooth the path toward democracy. Consider in this respect the Honduran example. As referenced above, the Honduran Constitution limits the president to serving a single term of four years, and any attempt by the president or his associates either to secure a second term or to extend his first for any duration will result in the forfeiture of his office.<sup>111</sup> This is not mere theory disconnected from reality. On the contrary, a military coup in the summer of 2009 made Honduras a fixture in the news media.<sup>112</sup> The latest spell of political volatility in this Latin American state was cast either as an unfortunate return to militarism despite brave steps taken toward liberal democratization<sup>113</sup> or an overly aggressive president driven by his own cult of personality.<sup>114</sup> There may be something to each of these insights. But the real source of instability in Honduras is neither the military nor the president. It is the constitution itself—specifically its entrenchment clause.

Let us return to the controversial facts of the Honduran coup. As president, Manuel Zelaya had seen support for his presidency tumble to historic lows not only among opposition parties—which had been gracious in defeat following his 2006 presidential victory—but also in the larger population,<sup>115</sup> and most ominously within his own party.<sup>116</sup> Inexplicably

undeterred by his evaporating popular approval,<sup>117</sup> Zelaya became an army of one, intent on overriding the Honduran constitutional provision limiting him to no more than one four-year term as president. Entrenched, and therefore unamendable, the provision imposes harsh civil penalties on those who dare even propose to amend it.<sup>118</sup>

Despite the express constitutional prohibition forbidding him from taking steps to amend the presidential term limit, Zelaya nevertheless pushed ahead.<sup>119</sup> He proposed to hold a referendum to gauge the popular will for amending this expressly unamendable constitutional provision.<sup>120</sup> No wonder, then, that Zelaya found himself standing alone in his audacious bid to rewrite the constitution, staring down a united opposition that was predictably led by his political adversaries, but less predictably also included the Congress, the bipartisan Attorney General, the nation's highest court and the independent Supreme Electoral Tribunal.<sup>121</sup> The Supreme Court ordered the military to detain Zelaya on charges of treason and abuse of power just hours ahead of the referendum he had planned to hold.<sup>122</sup>

The military, however, appears to have acted somewhat unreasonably in discharging its orders. Far from simply detaining Zelaya, Honduran forces reportedly broke into his home late at night, confronted and detained his personal security detail, and jarred the president out of his slumber with sounds of gunfire.<sup>123</sup> Within minutes, Zelaya had been captured by masked men, removed from his home and placed aboard a military airplane, destination unknown (at least to Zelaya).<sup>124</sup> It was not until the plane had

touched down in Costa Rica that Zelaya—still wearing his pajamas—finally knew his location.<sup>125</sup>

Few would defend the alarming manner in which the military stripped Zelaya of his presidential authority. Fewer still would see legitimacy in it. For by hoisting itself above the constitutional order governing the peaceful and democratic transfer of power from one elected leader to the next, the military appears to have violated one of the fundamental principles of liberal democracy. But appearances can often be deceiving. That may be especially true of this latest Honduran coup. Indeed, what at first seems like an incontrovertibly illegitimate affront to democratic values begins to look less indefensible with the benefit of our knowledge of Zelaya's designs to rewrite a constitutional provision that had expressly been immunized against amendment. From this perspective, the military action to remove Zelaya from power begins to look less like a disquieting plot to undermine the Honduran constitutional order and more like a noble effort to uphold the democratic principles that sustain it. And so while Zelaya claims that he was kidnapped with violence and brutality,<sup>126</sup> it seems that it may have in fact been Zelaya himself who had earlier tried to kidnap the Honduran constitution by circumventing the constitutional ban on presidential term limits.

But whether we defend or challenge the action of either the military or Zelaya, one point is incontrovertible: the impetus for the Honduran political crisis was the entrenchment clause barring the president from seeking to extend his term. It was none other than this constitutional clause that pit the leading popular democratic institution in Honduras—the presidency—versus the other national democratic institutions, namely the legislature, courts, and leading independent bodies. Absent this unchangeable clause, Zelaya would have been free to raise the possibility of a referendum, and to subsequently lawfully take the pulse of the people as to how they wish to be governed.

For what remains lamentably lost in this entire episode is precisely where Hondurans themselves stand on the matter. That is the most important element in the continuing Honduran dialogue about the future course of the constitution and its prohibition on amending presidential term limits. It is, after all, the constitution of the citizens of Honduras. They should not be silenced, as they have been by their own constitution no less. It is shocking that their constitution not only forbids them from even

considering proposals to amend the prohibition on presidential term limits, but also imposes civil penalties for it. Just as Hondurans were handcuffed into the stillness of constitutional paralysis, in an analogous fashion, the Honduran national democratic institutions were themselves left with no recourse but to uphold the rigidity of the constitutional text.

### C. *Reconciliatory Entrenchment*

Reconciliatory entrenchment—the third category in my taxonomy of entrenchment—is the least common among the entrenchment practices of constitutional states. The purpose of a reconciliatory entrenchment clause is laudable: to achieve peace among individuals whose interests were once in such heightened tension that the consequence was social discord, physical violence and even civil war. Recognizing the need to put an end to the conflict—that is, to reconcile the previously disputing or fighting blocs—the framers of a constitution will entrench a provision absolving members of those factions of all prior wrongdoing, whether criminal or civil, and forever extinguishing claims against them. The most common manifestation of reconciliatory entrenchment is a constitutional clause granting blanket amnesty or immunity.

Granting amnesty or immunity can be an effective vehicle to accelerate the otherwise slow and problematic march to peace, and to discourage perpetrators of civil war offenses from rekindling an outbreak of violence to defend themselves from the consequences of capture.<sup>127</sup> Not only have amnesty and immunity demonstrated their practical merit but their theoretical bases are moreover undeniable.<sup>128</sup> No wonder, then, that amnesty laws have been passed as far and wide as Afghanistan, Argentina, Chile, Peru, Uruguay and Zimbabwe.<sup>129</sup> They have also come into vogue in countries like Bosnia and Herzegovina,<sup>130</sup> Brazil,<sup>131</sup> and Sierra Leone,<sup>132</sup>

whose transitional documents form part of larger ceasefire agreements between rival parties. Even the United States has granted amnesties in the larger national interest, most notably following the Civil War when Abraham Lincoln and Andrew Johnson, successive presidents, issued proclamations conferring amnesty upon those who had fought against the Union.<sup>133</sup>

But to pass a law or executive order giving someone the benefit of amnesty protection is qualitatively different from inserting that amnesty provision into the text of a constitution, as is or has been the case in Colombia,<sup>134</sup> the Congo,<sup>135</sup> Côte d'Ivoire,<sup>136</sup> Liberia<sup>137</sup> and the Solomon Islands.<sup>138</sup> And enshrining amnesty or immunity in a constitution is itself wholly distinguishable from making that amnesty or immunity unamendable.

Although it happens much less so, countries have indeed entrenched amnesty provisions with sufficient frequency so as to make it more than a simple idiosyncrasy that can be passed off as a constitutional anomaly peculiar to outlier states.

The case of Niger is especially instructive. Following violent coups in 1996 and 1999,<sup>139</sup> the country adopted a new constitution, hoping that the

new social and political charter would spur citizens to relinquish their arms and cede their misgivings in the interest of national appeasement. In choosing among the many types of constitutions at its disposal—presidential, parliamentary, and everything in between—Niger opted for the French model of semi-presidentialism,<sup>140</sup> which marries parliamentary politics with presidential prerogatives. The new constitution was adopted in a national citizen referendum.<sup>141</sup> This remarkable popular mobilization signaled to the world, and to Nigeriens themselves, a new beginning that would take the conflicting, and conflicted, people of Niger in the direction of liberal democratization, something that had long eluded them in the past.<sup>142</sup>

Putting the past behind—and forever erasing it from the national memory—was, for Nigerien constitutional designers, the critical factor in the formula for achieving peace. With this in mind, the constitutional drafters enshrined an unamendable constitutional provision extending blanket amnesty to the aggressors in the 1996 and 1999 coups.<sup>143</sup> On the theory that the state and its citizens would more readily look to the future and turn away from their distressing past if the disquieting events of recent coups were stricken from the political field of play, the new constitution of Niger therefore granted eternal immunity to the architects and enablers of two of the more brutally destructive moments in Nigerien history. What is more, the Nigerien Constitution now states in no uncertain terms that this provision cannot ever be the subject of a constitutional amendment<sup>144</sup>—even if in the future the necessary and sufficient amendment conditions

exist and even if the popular and legislative majorities express their wish to pass an amendment revising this controversial provision.

Just as Niger chose to rest its future on the possibilities of reconciliatory entrenchment, South Africa made the same choice, but with a fascinating twist. Unlike Niger, which had issued an unconditional grant of amnesty to the architects, offenders and enablers of the coup, South Africa conditioned its grant of irrevocable amnesty on an admission of guilt and a requirement of full disclosure in a public forum of the events for which amnesty was to be granted.<sup>145</sup> The forum was the nation's Truth and Reconciliation Commission, widely praised for moving the state and its people toward peace.<sup>146</sup> As it forged a promising path toward national healing and reconciliation, South Africa's reliance on this mixed approach, combining the sweet with the sour, ultimately proved successful, in the view of many.<sup>147</sup>

The South African incarnation of reconciliatory entrenchment is worth closer attention. The post-apartheid 1993 interim constitution enshrined amnesty for those who had participated in politically motivated acts, omissions, crimes and offences during apartheid.<sup>148</sup> Later in 1995, the South African legislature passed a law giving greater shape to the terms of the amnesty.<sup>149</sup> All the while, the constitutional assembly was revising the interim constitution and, by the time the new constitution was ready in 1996, the document had retained all of the original stipulations pertaining to amnesty.<sup>150</sup> Soon thereafter, the South African Constitutional Court upheld the constitutionality of those constitutional and legislative protections—and went another step further, declaring that the conferral of amnesty would result in a free and clear absolution from criminal and civil liability.<sup>151</sup>

Ghana provides a third example of entrenching amnesty in the interest of peace and a sustainable ceasefire. As the first country on the African continent to break free from its colonial irons in 1957,<sup>152</sup> Ghana struggled through early difficulties in cementing a constitutional culture committed to

the rule of law. Ravaged by nearly eleven coups or coup attempts since its independence,<sup>153</sup> Ghana had little chance to know anything but political volatility, which slowed economic growth and investment in the new constitutional state.<sup>154</sup> Nearly four decades after its independence, the proud African country struck an agreement to create an innovative ceasefire constitution in 1992, entrenching amnesty for those who had been involved in triggering and exacerbating the socio-political instability years before.<sup>155</sup> The goal—to leave the past to itself and to allow those in the present to start afresh—was, and remains, laudable.

Although reconciliation is a noble ambition in civil society, particularly for countries embarking on significant political and social reconstruction, reconciliation has proven elusive when undertaken in the context of constitutional entrenchment. Forcing former enemies to lay down their arms and enter into an uncomfortable embrace gives rise to a palpable, and quite rational, sense of unease about the sustainability of such illusory truces. That this rough manner of peacemaking cannot quell passions, whether over the long-term and surely not overnight, is clear. For reconciliation requires surgical patience and precision—something that is not in the toolkit of constitutional designers.

The Nigerien example is proof positive. This failed effort could not be more illustrative of the hazard posed by relying on a constitutional text to shape and constrain human emotions as untamable as grief, fear, hatred, the irrepressible urge for retaliation and the primal need for vengeance. Not even one year elapsed after the Nigerien Constitution had conferred amnesty upon wrongdoers before the country descended yet again into the marshlands of the mayhem that only mutinies, coups and kidnappings of public officials can wreak upon an already weakened state.<sup>156</sup> This extreme political volatility continued through 2002 with sustained kidnapping attempts and mutinies, and even talk of another coup—which is precisely what the new constitution had been written to prevent.<sup>157</sup> True, the resentment that fuelled these alarming incidents is unlikely to have resulted from only the entrenchment of a reconciliatory provision. Nevertheless, the

prevailing winds charged that Niger's choice to entrench amnesty protections had effectively been a choice to enshrine a culture of impunity in its constitution.<sup>158</sup> In light of this, it is problematic to argue that entrenching amnesty has birthed the new beginning that Nigeriens had hoped would come from reconciliatory entrenchment.

Reconciliatory entrenchment is perhaps the most evocative of the handcuffs that allows us vividly to conceptualize the physical and psychological confinement to which entrenchment clauses consign citizens. From the perspective of victims of the often heinous acts that lead to entrenching reconciliatory measures, amnesty and immunity narrow the range of options for seeking—and also tapers the prospect for actually ever achieving—justice. Apart from pursuing vigilante justice or learning to live with the pain of an unrequited loss, few alternatives remain for a victim when the state disclaims its duty to prosecute those citizens whose behavior has harmed others. That is not to suggest that reconciliation cannot, nor should not, be the province of the state. Yet to impose it, rather than to invite it, raises critical questions of social design that illuminate some of the limitations of reconciliatory entrenchment, namely the corresponding and resultant entrenchment of victimhood. So rather than reinforcing the underlying premises of citizenship—namely self-definition, shared values, and collective decisionmaking—reconciliatory entrenchment undermines the popular choice that citizenship presupposes.

#### IV. THE ENTRENCHMENT SIMULATOR

No right is more constitutive of citizenship than the power to amend the constitution. For a constitutional amendment derives from the highest of all democratic values: popular choice. The process of amending the constitution strikes at the heart of what it means to be a people whose disparate members have joined together in a common venture to define themselves as a collective and to build and sustain the apparatus of their state.

To withhold from citizens the power of constitutional amendment is to withhold more than a mere procedural right. It is to hijack their most basic of all democratic rights. Nothing is more democratically objectionable than dispossessing citizens of the power to rewrite the charter governing the

boundary separating the citizen from the state, and citizens from themselves. Sequestering this democratic right commandeers the sovereignty that gives democracy its meaning and throws away the key to unlock the handcuffs that constitutions fasten to the wrists of citizens.

A. *The Expressive Function of Entrenchment*

There is good reason, though, to design constitutions so as to handcuff the wrists of citizens. Citizens are, after all, self-interested individuals whose first instinct is more often inward-looking and self-regarding than oriented toward the larger, and more public, interests of the community. At their best, constitutions mold disparate persons into members of a joint undertaking who ultimately join together to become, and to see themselves as, citizens of the state.

Constitutions achieve this high ambition by facilitating the development of social conscience, and of a social consciousness, among the citizens of the state in three ways. First, by setting down markers distinguishing proper from improper conduct both by the state toward citizens, and by citizens toward themselves. Second, by clearly demarcating the respective spheres of jurisdiction for the institutions of the state. And, third, by constructing the archetype of a just or ideal society to which citizens and the institutions of the state alike should aspire.

Entrenchment aims—though falls wide of the mark in its attempt—to fulfill the function of creating a model society. It fails in its mission because it lacks legitimacy insofar as its dictates derive not from the freely given consent of the people but from the often unwelcome and self-imposed will of the past. It is this disconnect—between the aspiration to shape shared values and the coercion to adopt those values—that dooms entrenchment to failure. Nevertheless, entrenchment expresses an important message not only to those bound by the terms of the written constitution but likewise to those outside observers curious to discern the bases and principles upon which stand that particular constitutional state.

In addition to setting apart a legal principle, social or moral value, governmental structure or political rule from other constitutional provisions, entrenchment also conveys the symbolic value of that principle, value, structure or rule<sup>159</sup>—the symbolic value that the constitutional entrenchers attributed to it precisely by entrenching it. This purely expressive function of entrenchment doubles as the core of its merit: deploying symbolic

statements—as opposed to using force or other forms of compulsion—to set or correct social norms.<sup>160</sup> That purposeful symbolism is the subtle, yet paradoxically the most powerful, virtue of entrenchment. For by identifying a constitutional feature of statehood as unamendable, entrenchment signals to citizens just as it does to observers what matters most to the state by fixing the palette of non-negotiable colors in its self-portrait.

The expressive function of entrenchment is not unlike the expressive function of constitutionalism or constitutional law. As Ashutosh Bhagwat writes, when judges interpret the constitution, they proclaim the values that constitute the constitutional culture of the state even as they shape those values.<sup>161</sup> Thus when courts engage in constitutional judicial review, they give “concrete expression to the unarticulated values of a diverse nation.”<sup>162</sup> Yet entrenchment does more than merely express a symbolic statement of unarticulated values. It makes an unvarnished definitive statement about the values that do and should bind citizens to the state, and citizens to themselves. There is nothing unarticulated about entrenchment. Quite the contrary, the very fact of entrenchment removes any specter of doubt as to what should be the values of the state.

An important distinction emerges in constitutional scholarship on this point. Scholars distinguish between the expressive and communicative functions of a constitutional text.<sup>163</sup> The former—expression—refers to an act or omission that unintentionally conveys meaning while the latter—communication—refers to an actual intent to convey meaning. Expression may as a consequence of this distinction occur and exist on its own without communication. For instance, a person may act or fail to act in such a way as to express an affinity for someone or something but that person may not have intended to communicate that affinity. Therefore expression, which is subject to evolving interpretations from third party observers, is a gesture dissociated from intent. In contrast, communication is a gesture whose purpose is indeed to convey an intent and whose meaning is usually settled by the communicator herself. Insofar as the very nature of entrenchment entails a similarly constraining intent to communicate the importance of a principle, value, structure or rule, entrenchment goes beyond simply performing an expressive function. Entrenchment openly marries

expression with communication by, first, clearly identifying a constitutional provision as unamendable and, second, just as clearly manifesting the intent to convey the meaning behind the decision to have made that provision unamendable.

That constitutional entrenchment merges expression with communication raises two concerns, each of which, on its own, divests entrenchment of the legitimacy that is the lifeblood of constitutionalism. First, the effect of blending expression and communication is to weaken the potent persuasive subtlety of the expressive force of entrenchment. Standing alone, expressive entrenchment seeps inconspicuously into the consciousness of citizens, slowly but assuredly taking root in the collective spirit of the citizenry. But when this intention is communicated outright, our intuition raises red flags about the motives behind the wish to instill the values entrenched in the constitution. Much better to use the constitutional text to make expressive statements about rights and values, and therefore to allow citizens to reach their own conclusions about the worth of particular values and which ones they wish to adopt as their own, than to impose them from the top downward.

Second, the risk inherent in authorizing the state or founding drafters to reveal their intent to impose values on a class of citizen subjects—as is the case when expression and communication are combined—is that the chosen values may not find a welcome home in the individual hearts and the shared mores of those citizens. The costs incurred in entrenchment exceed its benefits when what we seek to entrench stands in conflict, and if not in conflict then in some tension, with existing or future beliefs or convictions. This echoes the stakes in the tug of war pitting constitutional structure versus political culture, the former mistakenly assuming that it can actually dictate the content of the latter. There is a grave danger in presuming that a constitutional structure, for instance entrenchment, can shape political culture, specifically social values. Indeed, the continuing dialogue about this very matter—a dialogue that is unlikely to achieve resolution any time soon<sup>164</sup>—demonstrates only one point beyond doubt: that constitutional structure and political culture enjoy a bi-directional relationship in which the form and fate of one is linked to the fate and form of the other.

Siegel, *Protecting the Constitution from the People: Juricentric Restrictions on Section Five Power*, 78 IND. L.J. 1, 3 (2003).

Therefore, the critical institutional design challenge to breathing legitimacy into constitutional entrenchment is to find a way to isolate its redeeming expressive function from its unproductive communicative function. And that is just what I hope to do. With the entrenchment simulator that I shall unveil in the pages to follow, I will endeavor to achieve twin goals. First, I will aim to capture the salutary expressive essence of entrenchment within the entrenchment simulator. And second, I will seek to disengage entrenchment from its the problematic consequence of constraining popular choice and preempting self-definition. The immediate purpose of the entrenchment simulator is to signal important social pre-commitments. But its larger purpose is to create sufficient space within which those pre-commitments may evolve over time, as of necessity they must.

### B. *The Challenge of Constitutional Democracy*

But before I proceed to introduce the entrenchment simulator, we must first return to the question that began this inquiry: what is the proper balance between constitutionalism and democracy? This is of course harder said than done. Despite the richness and diversity of constitutional texts around the world, it is difficult to identify a constitutional state whose constitutional text has successfully managed to solve the enduring tension between constitutionalism and democracy. Granted, it may be too much to expect of constitutional designers to do anything but modestly lessen that tension. After all, scholars have long recognized its inevitable persistence,<sup>165</sup> some even arguing that there is merit to the tension itself and that we should not resolve it.<sup>166</sup>

If successful efforts to assuage the tension are few and far between, quite the contrary is true of constitutional texts that veer too sharply toward either constitutionalism or democracy. Begin first with the former. Above, I have chronicled and illustrated how constitutional states privilege constitutionalism at the expense of democracy by entrenching discrete

MURPHY, *CONSTITUTIONAL DEMOCRACY: CREATING AND MAINTAINING A JUST POLITICAL ORDER* (2007)).

constitutional provisions.<sup>167</sup> But there exists something far worse than that: constitutional states which entrench the entire constitutional text—each and every constitutional provision—instead of a mere single provision or a few provisions.

To find what is perhaps the most egregious example of a constitutional text that elevates constitutionalism so high above democracy as to render democracy virtually meaningless, we must look to Mexico. True, Mexico permits amendments to its constitution provided that the amendment is approved by a two-thirds supermajority of the national legislature and a majority of the subnational legislatures.<sup>168</sup> But that is the extent of the revisions or additions permitted by the constitution. Anything more than discrete amendments to the text is expressly forbidden insofar as the constitution does not contemplate, and indeed rejects, the possibility of a new constitution ever being created to replace the existing one—even if a popular revolution ensues.<sup>169</sup> The Mexican Constitution consequently makes revolution illegitimate and deprives it of any force of reason before one is ever launched.

That the Mexican Constitution tilts so militantly in favor of constitutionalism as to outlaw revolution—which is the very apex of democratic mobilization and popular will—should concern anyone infused with the democratic spirit and otherwise committed to the core democratic principles of popular choice and self-definition. The importance of this point cannot on any conceivable grounds be overestimated because its implications are just that colossal. For the Mexican Constitution takes a radical position that effectively holds time and space forever constant, never permitting the kind of political change that has made possible the great democratic transformations in human history, namely the constitutional birth of the United States in 1787,<sup>170</sup> the founding of the first French Republic in 1789,<sup>171</sup> or the social renewal of South Africa in 1996.<sup>172</sup> These possibilities are foreclosed to Mexicans, even if conditions in their state deteriorate so intolerably as to require broad popular mobilizations to reclaim the nation from a despot or illegitimate rulers. There may, therefore, be no better example than the Mexican Constitution to demonstrate how the

reverence for written constitutionalism has in some constitutional states suppressed democracy and prevented citizens from exercising their legitimate authority to change or chart the constitutional course of their state.

But let us also recognize that constitutional states can just as well commit the contrary though equally objectionable offence, that is to say, privileging democracy at the expense of constitutionalism.<sup>173</sup> Switzerland is the paradigmatic model of a state where procedural democracy is the highest value. Long regarded as the modern cradle of direct democracy,<sup>174</sup> Switzerland has accordingly conferred upon itself a constitution that grants unreviewable power to its citizens, placing no matter of law, rights or policy beyond their reach. Citizens may vote in referenda to overrule legislation, revise and reverse matters of social policy, reconfigure the organs of the state, and engage in wholesale constitutional change.<sup>175</sup> And Swiss citizens may do all of this with a bare majority.<sup>176</sup>

That Swiss citizens have the final say in constitutional matters is not out of the ordinary. American citizens, for example, retain determinative control over their constitution, provided they can muster the requisite supermajorities to successfully navigate the amendment process.<sup>177</sup> However, what makes the Swiss model so exceptional in its inclination toward majoritarian democracy and in its disinclination toward constitutionalism is that, quite unlike the United States and other leading liberal democracies, Switzerland does not allow judicial review of federal legislation.<sup>178</sup> This is consistent with the theme that runs through the entire Swiss public constitutional apparatus: majoritarian public choice. Whereas courts typically function as the supervisory force against the threat of majoritarianism in liberal democracies, courts in Switzerland have no such

---

173. One particularly fascinating example that appears to privilege democracy at the expense of constitutionalism, yet actually does the reverse, is the El Salvadorian Constitution, which obliges citizens to mount an insurrection in the event that an entrenched rule is violated. See CONSTITUCIÓN DE LA REPÚBLICA DE EL SALVADOR [Constitution], tit. III, art. 88 (1983) (El. Salv.). While this would appear to celebrate the democratic mobilization without which insurrection would be impossible, the implicit purpose of that mobilization actually undermines the popular choice and self-definition that mobilization presupposes—precisely because the constitutional text commands eternal obedience to an unchangeable constitutional rule.

role. No check, therefore, constrains the majoritarian wishes—or more accurately, the impulses—of Swiss citizens.

This unbridled Swiss majoritarianism is just as alarming as the Mexican constitutional entrenchment is restrictive. Both do equal parts injustice and harm to popular choice, the former because it fails to test the strength and sustainability over time of that choice, and the latter because it gives insufficient respect to it. And that is the harm in subscribing indiscriminately to either constitutionalism or democracy without recognizing that each has strengths that compensate for the weakness of the other.

Our challenge, then, is to make peace between constitutionalism and democracy. Resolving the tension between them will require, first, building on their respective strengths and compensating for their respective weaknesses and, second, fashioning a constitutional structure that will make real the promise that both hold for humanity. This, in my view, is no small feat insofar as it demands the design of a constitutional device exhibiting three components: (1) entrenchment; (2) expression; and (3) an escape hatch.

Before I outline each of these three items, let me say a short word on each. First, the text need not necessarily entrench a legal principle, social or moral value, governmental structure or political rule. But if it does, it should not resort to indefinite constitutional entrenchment. The text should instead entrench that principle, value, structure or rule in a way that corresponds to the fourth station of entrenchment—which I call *heightened constitutional entrenchment*<sup>179</sup>—pursuant to which the constitutional text demands special procedures (which depart from the default constitutional amendment procedures) to amend that entrenched item. Second, it is preferable to enshrine some degree of entrenchment beyond the third station of entrenchment—which I call *conventional constitutional entrenchment*<sup>180</sup>—because of the expressive and symbolic value that only a special form of entrenchment can convey. And since the fifth and final station—*indefinite constitutional entrenchment*—is much too constraining, only the fourth station remains as a possibility.<sup>181</sup>

Finally, we cannot resolve the tension between constitutionalism and democracy merely by tilting the scales less so in favor of constitutionalism. We must instead make a very real effort to actualize the underlying premise of procedural democracy while, nonetheless, guarding against the menace of majoritarianism. We can achieve this balance if, alongside the use of

some degree of constitutional entrenchment, we grant citizens an escape hatch to pull if they wish to extricate themselves from the handcuffs that entrenchment wraps around their wrists. That escape hatch is provided by the fourth station of entrenchment—*heightened constitutional entrenchment*—precisely because it does not consign citizens to life under indefinite constitutional entrenchment but rather allows them to exercise their popular choice. It is true, however, that citizens exercise their popular choice under constrained conditions, but this restriction on democracy is both politically useful and socially vital in a liberal democracy.

### C. *Designing Constitutional Democracy*

The entrenchment simulator achieves each of these three objectives. It is a constitutional structure whose aim is to reconcile constitutionalists with democrats by pooling the virtues of constitutionalism and democracy, and by mitigating their respective limitations. The entrenchment simulator creates a new constitutional arrangement whose function is to govern both the content and timing of constitutional amendments. Were constitutional states to adopt this entrenchment simulator, they would achieve the expressive benefits of constitutional entrenchment while not compromising the popular choice and self-definition underlying procedural democracy.

Three elements form the basic apparatus of the entrenchment simulator: (1) interim induction; (2) constitutional rank; and (3) sequential approval. The first, interim induction, seeks to respond to the challenge that confronts constitutional designers when they endeavor to introduce, and in so doing to entrench, new values into the national consciousness. Constitutional designers may often face resistance from citizens, who may for various reasons be unreceptive to new values; for instance, a new founding commitment to preserving federalism or unitarism; presidentialism or parliamentarism; republicanism or monarchism; religion or secularism; or a commitment to transforming the state through civil and political rights or through electoral procedures, or even a new founding commitment to reconciliation. In order to allow sufficient opportunity for the new values to take root in the citizenry, the entrenchment simulator mandates a period of induction—measured from the date the entrenchment comes into force—during which those newly entrenched values enjoy absolute immunity from constitutional amendment. Not even unanimity may overturn the entrenched provision.

Induction serves an important function. Insofar as there are long odds facing any attempt to deploy constitutional structure to shape political culture, induction helps facilitate the process of infusing new values into the

lives and being of citizens. Induction—by which I mean a period of acculturation during which new constitutional values introduced by entrenchment are assimilated—gives those new values a chance to take root and, once rooted, to remain in the consciousness of citizens. Consider it a mandatory trial run whose animating hope is that, by the end of the designated induction stage, what may have been viewed initially as controversial or foreign values imposed by elites ultimately become ingrained in the quilt of state and the fabric of citizenship—so deeply that they become constitutive of nationhood, just as the constitutional framers had hoped.

Absent this period of courtship between the text and the citizen, a constitutional state may never be fully capable of making a clean break from the past and charting a new direction. With the possibility looming of a constitutional amendment returning the state to days past or changing constitutional clothes yet again, there is no assurance that the vision of the framers will ever be given a real opportunity to take hold. But induction creates and cultivates that opportunity.

Just how long this period of induction should last before citizens may once again reclaim their right to amend the constitution is a difficult matter. On the one hand, limiting the induction period to a few years may be too short a time span because it would be insufficiently long to inculcate citizens with new values. On the other, extending induction to much more than an entire generation, say over twenty years or so, may be too long because it would approximate too closely the perilous conditions of constitutional entrenchment we have canvassed above.

Looking to those constitutional states currently imposing a comparable though not quite similar temporal restriction against amending new constitutional provisions, we may conclude that they generally ban amendments anywhere from five to ten years from the date of enactment.<sup>182</sup> Afterward, the constitutionally protected provision reverts to normal status and may be freely amended according to the conventional rules of constitutional amendment. Five or even ten years seems like much too little

---

182. *See, e.g.*, THE CONSTITUTION OF THE STATE OF KUWAIT pt. V, art. 174 (disallowing amendments within five years of the coming into force of the constitution); PERMANENT CONSTITUTION OF THE STATE OF QATAR pt. V, art. 148 (disallowing amendments within ten years of the coming into force of the constitution); *see also* CONSTITUIÇÃO DA REPÚBLICA PORTUGUESA [Constitution] pt. IV, tit. II, art. 284(1) (Portugese Republic) (requiring a wait of five years between each constitutional amendment, absent the agreement of 80% of the national legislature); 1975 SYNTAGMA [SYN] [Constitution] 4, § 2, art. 110(6) (Greece) (imposing a five-year wait between constitutional amendments); UNDANG-UNDANG DASAR REPUBLIK DEMOKRATIS TIMOR LESTE [Constitution] pt. VI, tit. II, art. 154(2)–(4) (E. Timor) (forbidding amendments fewer than six years apart, unless 80% of the national legislature agrees otherwise).

time to allow new values to permeate the state and its citizens. However, one generation or more seems right, although each constitutional state availing itself of the entrenchment simulator could of course tailor this time period to its own indigenous needs and conditions. Still the principle remains clear: induction—which entrenches a constitutional provision for only an abbreviated period of time—serves the purpose of breathing new values into citizens, fully consistent with what constitutional entrenchers hope will transpire when a people confers a new constitution upon itself.

But induction on its own is insufficient to help right the balance between constitutionalism and democracy. Without more added to our design, an entrenched constitutional provision will revert to being a conventional constitutional provision after the designated time has elapsed following the interim induction period. The entrenchment simulator addresses this problem with its second component: constitutional rank. To understand the notion of constitutional rank, we must return to the fourth station of constitutional entrenchment: heightened constitutional entrenchment.

What motivates constitutional designers who adopt indefinite constitutional entrenchment is the conviction that certain features of the state are more important, and if not more important then more constitutive, of the state and its citizens. For that is the effect, either real or perceived or both, of entrenching a legal principle, social or moral value, governmental structure or political rule. Constitutional designers resort to indefinite constitutional entrenchment to establish a hierarchy of constitutional provisions, which represents an implicit rank ordering of constitutional values. Indefinitely entrenched provisions are regarded by the framers as not only qualitatively different but more valuable than the conventionally entrenched provisions—and those framers hope that these entrenched values will ultimately come to be seen as such both by citizens and third party observers. This is the inevitable consequence of indefinite constitutional entrenchment. By entrenching a particular feature of the constitution, constitutional designers envelop that feature in a certain measure of legitimacy—founding legitimacy, as opposed to continuing popular legitimacy (though the two are not mutually exclusive)—which results in elevating that feature above all other conventionally entrenched constitutional provisions. The upshot of indefinite constitutional entrenchment is that it creates tiers of significance among constitutional provisions. That is what I mean by constitutional rank.

Using the concept of constitutional rank, the entrenchment simulator establishes tiers of escalating significance among constitutional provisions. But it does so in a way that retains the amendability of those constitutional provisions designated as most important in the constitutional order.

Recalling that the entrenchment simulator rejects indefinite constitutional entrenchment as illegitimate and imprudent, the alternative that presents itself is heightened constitutional entrenchment. Two positive benefits flow from inviting constitutional states to rely on heightened constitutional entrenchment in their constitutional design. First, heightened constitutional entrenchment exercises the same expressive function as indefinite constitutional entrenchment, signaling both to citizens and to third party observers what is thought to be most important about the state: its design and its citizens. Second, it goes beyond simply distinguishing between the two tiers of entrenchment—indefinite constitutional entrenchment and conventional constitutional entrenchment—that we discern in constitutional states deploying indefinite constitutional entrenchment. Rather, heightened constitutional entrenchment folds within itself an infinite possibility of tiers of entrenchment that constitutional designers can use to distinguish among several tiers of constitutional provisions. Those possibilities range from conventional constitutional entrenchment to multiple incarnations of heightened constitutional entrenchment, but they exclude indefinite constitutional entrenchment.

We might imagine, for example, a hypothetical presidential state designating four tiers of constitutional provisions.<sup>183</sup> The fourth, and lowest, tier could include the basic structural provisions of the constitution, namely providing that the chambers of the bicameral national legislature consist of 300 representatives in the lower house and 100 senators in the upper house. This bottom tier would be subject to the default rules of constitutional amendment mandated in the constitutional text. Let us posit, in this instance, that the default rule for amending the constitution requires two-

---

183. I use four tiers only as an example to accentuate the possibilities for innumerable tiers of constitutional provisions. Some countries use fewer, or more, tiers to categorize their constitutional provisions, in the process signaling to citizens and to observers just what is more or less important than others. It is plainly a rank-ordering of constitutional principles and values. *See, e.g.*, Commonwealth of Australia Constitution Act, 1900, ch. VIII, art. 128 (creating two tiers of constitutional provisions, each requiring adherence to different rules of amendment); Part V of the Constitution Act, 1982, Schedule B to the Canada Act 1982, ch. 11, §§ 41–47 (U.K.) (establishing roughly one half-dozen tiers of constitutional provisions, each with its own corresponding amendment threshold); CONSTITUTION OF THE REPUBLIC OF GHANA ch. 25, § 290–91 (establishing two tiers of constitutional provisions and two different rules for amending provisions in each tier); CONSTITUTION OF THE REPUBLIC OF RWANDA tit. XI, art. 193 (creating two tiers of constitutional provisions, each with its own corresponding threshold for amendment); CONSTITUTION OF THE REPUBLIC OF SOUTH AFRICA NO. 108 OF 1996 ch. 4, § 74 (distinguishing among nearly one half-dozen tiers of constitutional provisions, each with its own amendment threshold); CONSTITUTION OF THE KINGDOM OF SWAZILAND ACT ch. XVII, § 245–47 (distinguishing among four tiers of constitutional provisions and four different rules for amending the provisions in each tier).

thirds concurrence of each chamber as well as two-thirds concurrence of the subnational legislatures.

Moving upward along our constitutional hierarchy, the third tier of constitutional provisions would require a more exacting threshold for amending the constitution—say, three-quarters concurrence of each chamber and three-quarters of the subnational legislatures—and consist of constitutional provisions thought by the framers to be more important than the simple distribution of seats in the bicameral legislature, for instance term limits on presidential service. In the second tier, which could include, just as an example, a constitutional provision requiring the president and the bicameral national legislature to pass a balanced budget each year, the rule for amending the constitution would be tougher even still: three-quarters approval of each legislative chamber and three-quarters of the subnational legislatures.

Finally, the first and highest tier of constitutional rank in our hypothetical could conceivably include a rule that is so deeply interconnected with the founding moments of the state—consider perhaps the secular nature of the state—that it requires an even more exigent quantum of popular and legislative approval: three-quarters approval from both the bicameral national legislature and the several subnational legislatures *as well as* three-quarters approval of the citizenry in a referendum.

Constitutional rank, then, is the incarnation of heightened constitutional entrenchment. For when one invokes the latter, one is by implication declaring that there exists an echelon of merit according to which each constitutional provision may be classified. If a principle, value, structure or rule is regarded as minimally more important than a conventional constitutional provision but less important than the most important constitutional feature of the state, then it should be categorized according to the lowest level of heightened constitutional entrenchment—the lowest constitutional rank within that degree of entrenchment. Conversely, if it is viewed as markedly more important than a conventional constitutional provision and minimally less important than the most important constitutional feature of the state, then it should be categorized according to the highest level of heightened constitutional entrenchment—otherwise understood as the highest constitutional rank within that degree of entrenchment.

Constitutional designers may accordingly enjoy the sweet without suffering through the sour if they adopt this strategy, because it bestows upon the constitution and the state the expressive benefits of entrenchment while not weakening the democratic core of the citizenry. By highlighting

the richness of entrenchment possibilities that lie between conventional constitutional entrenchment and indefinite constitutional entrenchment, heightened constitutional entrenchment and its incarnation in the notion of constitutional rank demonstrates the merit of this second feature of the entrenchment simulator.

Now, having reached the third element of the entrenchment simulator, the entire mechanism begins to take final shape. If induction serves the purpose of creating a safe harbor within which constitutional framers may endeavor to shape the contours of and instill new values into citizens, and if ranking allows framers to express both implicitly and explicitly what they deem most constitutive of statehood and citizenship, then the third element—sequential approval—is the mechanism through which citizens may manifest their intention to free themselves from the handcuffs that the constitutional entrenchers have wrapped around their wrists. It is, in short, the escape hatch that citizens can pull to liberate themselves from the past and to propel themselves into their own self-defined collective future.

Sequential approval requires that citizens express their freely-given views on whether to amend a particular constitutional provision falling within a class of heightened constitutional entrenchment. But sequential approval requires that citizens express their consent to such an amendment more than once, in at least one initial and one subsequent confirmatory vote, and according to a clearly delimited majority defined in the constitutional text. Although the actual majority threshold would presumably vary from one constitutional text to another—as would the number of times that citizens would be required to reach that particular majority in different votes separated by a constitutionally defined period of time—the principle remains the same despite any wrinkles that may exist among constitutional states adopting the entrenchment simulator.

Let us deconstruct the following hypothetical constitutional rule mandating sequential approval: “In order to be approved, an amendment to [provision x] shall require a supermajority of eligible citizens to vote in favor of the amendment on two separate occasions separated by five full years as of the day of the first vote.”

We should note three things about this hypothetical rule. First, the threshold for amendment is high: a supermajority of citizens. Second, the confirmatory vote occurs only in the event of a successful supermajority vote in favor of the amendment at the initial vote. Third, the confirmatory vote is separated from the initial vote by five full years, which would mean in most constitutional democracies that there had been intervening legislative or executive elections, or both. This is significant for three reasons: namely that the supermajority threshold tests the strength and

intensity of popular will for an amendment; that the five-year waiting period would verify the sustainability over time of the popular choice to amend the constitution; and that the intervening elections would have afforded electoral candidates the opportunity to voice their opinion on the amendment at a time when citizens would have been most likely to engage attentively to the ongoing political discourse. Of course, this hypothetical constitutional rule is just that—hypothetical.<sup>184</sup> Nevertheless, it lays bare the usefulness of sequential approval.

Recall our baseline premise: we must mitigate the menace of majoritarianism, which typically manifests itself in mob mentality that prefers to act on emotion in the immediacy of the moment rather than to take the necessary time to deliberate carefully and critically about the proper course of action. Requiring sequential approval helps ensure that the popular will accurately reflects the considered and thoughtful judgment of the citizenry instead of its most primal predispositions, which is precisely the source of our discomfort about majoritarianism. Quite apart from the temporal element of sequential approval, combining time and threshold makes it even harder to amend a provision that has been entrenched pursuant to heightened constitutional entrenchment because it requires a special majority to do so. That citizens in favor of reversing the entrenched provision must meet the designated special majority threshold more than once is yet another way to mitigate majoritarianism. For were citizens to form the requisite majorities successfully twice over the designated period of time, it would rebut the presumption of the transient and fickle nature of citizens—the very vices that raise concerns about majoritarianism.

That is the entrenchment simulator. It consists of three distinguishable elements: first, an interim induction period, during which new values or principles are given time to integrate into the constitutional culture of the state and its citizens; second, a constitutional ranking arrangement, pursuant to which constitutional designers may designate, with the use of heightened constitutional entrenchment, different tiers of constitutional provisions on the basis of their respective significance to the state; and third, a requirement of sequential approval, which imposes both temporal and

---

184. Some constitutional states currently use a comparable technique for amendments to the constitution. *See, e.g.*, KONSTITUSIYA AZERBAYCAN RESPUBLIKASININ [Constitution] § V, ch. XII, art. 156 (Azer.) (requiring two sustained majority votes, each separated by a period of six months); CONSTITUTION OF ERITREA ch. VII, art. 58 (1997) (providing that a constitutional amendment must be approved by two separate votes one year apart). Haiti does something quite interesting with respect to the timing of the coming into force of amendments: an amendment that is passed by the national legislature does not become valid until after the installation of the next duly-elected president. CONSTITUTION DE LA RÉPUBLIQUE D'HAÏTI tit. XIII, art. 284–2. This appears to be an effort to avert political self-dealing.

voting threshold obstacles to amending those entrenched constitutional provisions. Each of these three elements, taken together, helps us address the enduring tension between constitutionalism and democracy.

To recap the ground we have covered, let us reflect on the concern that prompted our inquiry: many constitutional states have, to their liking and with several different devices, resolved the tension between constitutionalism and democracy in favor of constitutionalism, most notably by indefinitely entrenching constitutional provisions beyond the reach of the citizenry. The consequence of prohibiting citizens from exercising their right to amend their own constitution is to divest citizens of their right to self-definition and popular choice, in essence forever tying their hands with no recourse ever to free themselves from their predicament. We should of course expect that constitutions would handcuff citizens, in so doing preventing them from taking actions that the state, the founding drafters, as well as intervening generations of constitutional amenders deem improper in that particular society at that particular time. But indefinite constitutional entrenchment does not simply handcuff citizens—something that all constitutions do, as they should. Indefinite constitutional entrenchment throws away the keys to those handcuffs, consigning citizens into the permanent custody of the entrenching generation.

Constructing a mechanism to return those keys to citizens is no easy task. But the entrenchment simulator may hold promise for meeting that challenge. In confronting the tension between constitutionalism and democracy, the entrenchment simulator strikes a compromise between, on the one hand, the unforgiving rigidity that is characteristic of indefinite constitutional entrenchment and, on the other, the public autonomy that democratic liberty entails. Three points are useful by way of summary.

First, the entrenchment simulator recognizes the importance of entrenchment. But it privileges heightened constitutional entrenchment over indefinite constitutional entrenchment because the former keeps the keys to self-definition within the reach of citizens, however complicated the labyrinthine rules to amend a provision subject to heightened constitutional entrenchment may be. Second, the reason why the entrenchment simulator looks so favorably upon some measure of entrenchment is precisely because of the expressive value that entrenchment entails. Fixing common civic objectives and anchoring the state in shared social and political values is exceedingly important to creating and cultivating a community of citizens. The entrenchment simulator latches onto expressiveness as the vital means to that critical end.

Finally, the entrenchment simulator acknowledges that it is an event of high moment to undertake the process of unentrenching a constitutional

provision whose drafters thought it was so foundational as to merit entrenchment in the first place. That is why the entrenchment simulator adds a temporal element to the task of amending an entrenched constitutional provision. To guard against the perils of majoritarianism, the entrenchment simulator calls for special majorities to express their collective wish to unentrench an entrenched provision—not only on one occasion, for instance a single referendum conducted on a single day, but rather on multiple occasions over different periods of time. This last wrinkle strives to ensure both that, in the interest of constitutionalism, a sustained special majority has sufficient time to deliberate on the enormity of amending an entrenched constitutional provision and that, in the interest of democracy, citizens retain determinative decisionmaking authority to shape their state.

## V. CONCLUSION

Perhaps the tension between constitutionalism and democracy will never quite fade. Constitutionalism and democracy are, after all, each anchored in opposing visions of statehood and citizenship. The former orients itself toward substantive principles that can often be achieved only by pinching down on the procedural values that give meaning to the latter. And the latter privileges civic participation in the very democratic processes that the former constrains with rules about who may participate, when and how they may do so, and toward what ends. It therefore seems unavoidable that constitutionalism and democracy would sometimes clash, and that the former would prevail in some contexts just as the latter would reign in other contexts.

What is not inescapable, however, is that one would so dominate the other as to reduce it to a mere shell of itself. Yet that is precisely what results from entrenchment. When constitutional drafters entrench constitutional provisions against amendment by even the most compelling popular or legislative majorities, the consequence is to cast constitutionalism in the leading role and to relegate democracy to the background. Entrenchment invites constitutionalism to breathe in all of the available oxygen, and in so doing it chokes democracy into submission. For by divesting citizens of the fundamental civic right to popular choice and self-definition, entrenchment undermines the promise of citizenship and the possibilities of constitutionalism.

The entrenchment simulator begins the critical work of reversing the tide of constitutionalism in constitutional states. The purpose of the entrenchment simulator is not necessarily to elevate democracy over

constitutionalism. It is more modestly to right the balance that has undeniably shifted away from democracy since the advent of the written constitution. Indeed, if anything may be said about the preferences betrayed by the entrenchment simulator, it is that it cedes to constitutionalism much of the terrain once governed by democracy. But with good reason, given the inherent dangers of majoritarianism that modernity has demonstrated with sharp and disconcerting clarity.

There, nevertheless, remains much work left to do to strike the proper balance between constitutionalism and democracy. The road ahead is admittedly long. But the entrenchment simulator holds promise for resolving this enduring tension—a tension that continues to define the stakes in constitutional law and theory to this very day. Only by holding firm to foundational principles of statehood and citizenship—namely the freedom of popular choice, the right to self-definition, and the legitimacy of public authority—may we ultimately achieve a comfortable consensus on how rigidly constitutionalism may constrain democracy and what democracy must surrender to constitutionalism.
