New Per Se Taking Rule Short Circuits Cable Television Installations in New York: Loretto v. Teleprompter Manhattan CATV Corporation

— The fifth amendment provides in part that private property shall not be taken by government for public use without just compensation.² This proscription is applicable to the states through the fourteenth amendment.³ The government does, however, have the power to regulate private property, without compensation to the owner, to protect the health, safety or general welfare of the public.⁴ Today this power to regulate private property, known as the police power, often is challenged as violating the fifth and fourteenth amendments' prohibition against uncompensated taking of private property for public use.⁵ At some point a land use regulation may become so onerous that it constitutes a taking of property.⁶ If it is determined that a regulation constitutes a taking, the government must exercise its power of eminent domain and compensate the landowner in order to pursue its program.⁷

The point at which permissible police power regulation ends and compensable taking begins, however, has never been clearly established or defined.⁸ Judicial attempts to determine the specific point have produced no set formulae or methods.⁹ Instead the Court has developed different and often conflicting theories without overruling old theories.¹⁰ Precedent still exists which holds that a mere regulation of land use, short of a physical appropriation, can never be a taking.¹¹ In more recent cases, however, the Court has held that excessive land use regulation alone may constitute a taking even absent any physical appropriation of private property.¹² Moreover, the Court still cites both lines of precedent.¹³

² U.S. CONST. amend. V, "No person shall ... be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation." Id.
⁵ See, e.g., id. (no taking found); Goldblatt v. Town of Hempstead, 369 U.S. 590 (1962) (no taking found); United States v. Central Eureka Mining Co., 357 U.S. 155 (1958) (no taking found); United States v. Caltex, Inc., 344 U.S. 149 (1952) (no taking found); Miller v. Schoene, 276 U.S. 272 (1928) (no taking found); Pennsylvania Coal Co. v. Mahon, 260 U.S. 395 (1922) (taking found); Hadacheck v. Sebastian, 239 U.S. 394 (1915) (no taking found).
⁶ Pennsylvania Coal Co. v. Mahon, 260 U.S. 395, 415 (1922). "The general rule at least is, that while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking." Id.
⁷ Id. at 413.
⁹ See cases cited supra note 8.
¹⁰ Compare Mugler v. Kansas, 123 U.S. 623, 668-69 (1887) with Pennsylvania Coal Co. v. Mahan, 260 U.S. 395, 415 (1922). In Mugler v. Kansas, 123 U.S. 623, 668-69 (1887) the Court held that a regulation which merely restricted the use of property could never be deemed a taking. Id. In Pennsylvania Coal Co. v. Mahan, 260 U.S. 395, 415 (1922), however, the Court invalidated a regulation prohibiting the mining of coal. Id. While not explicitly overruling Mugler, the Court stated that the general rule was that regulation which goes "too far" will be deemed a taking. Id.
Nevertheless, the Supreme Court recently has been consistent in its approach to taking disputes. The Court has used an *ad hoc* balancing process in recent cases, holding that the circumstances of the particular case will determine whether a taking has occurred.\textsuperscript{14} While the Court has not articulated a set method of analysis, its inquiry has not been standardless.\textsuperscript{15} The Court weighs the public interest or benefit served by the regulation\textsuperscript{16} against such factors as the character of the government action,\textsuperscript{17} the economic impact of the regulation on the property owner,\textsuperscript{18} and the regulation's interference with the owner's reasonable investment-backing expectations.\textsuperscript{19} If the public interest is strong and is not outweighed by the impact of the regulation, the Court generally has upheld the regulation.\textsuperscript{20}

In employing this balancing process in recent cases, the Court did not distinguish between regulations which did or did not require a permanent physical invasion of private property.\textsuperscript{21} In the recent Supreme Court case of *Loretto v. Teleprompter Manhattan CATV Corp.*,\textsuperscript{22} however, the Court held that the balancing process did not apply to regulations which caused a permanent physical occupation of private property.\textsuperscript{23} Rather the Court held that a regulation which required a permanent physical occupation of private property was a taking *per se*, without regard to other factors.\textsuperscript{24} *Loretto* effectively limited the use of the multi-factor balancing process to taking disputes which involve temporary physical invasions of property or non-possessory use regulations, while affirming a *per se* rule for those disputes which require any type of permanent physical occupations.\textsuperscript{25}

Jean Loretto, the plaintiff in *Loretto*, was a New York City apartment building owner who discovered that Teleprompter Corporation and Teleprompter Manhattan CATV ("Teleprompter") had physically bolted cables and equipment to the roof of her build-

The installations consisted of approximately thirty feet of cable and several small metal directional taps. The plaintiff did not discover the existence of Teleprompter's facilities until after her purchase of the building. At that time, Teleprompter dropped a visible subcable down the front of her building to provide cable service to a first floor tenant.

The initial installation of cables and directional taps was made pursuant to an agreement between Loretto's predecessor in title and Teleprompter, and prior to Loretto's purchase of the building. In making the subsequent cable installation, however, Teleprompter also relied on the authority of New York Executive Law Section 828. Section 828 barred landlords from interfering with the installation of cable television facilities on their property. The statute only required that the companying pay for the installation, maintenance and removal of the facilities, indemnify the owner for any damages caused by the equipment, and pay the owner a set fee for the use of his or her property. The fee at the time of Teleprompter's installation of the subcable had been set by the Commission on Cable Television at a one-time one dollar payment. Under the statute a landlord-owner was prohibited from denying the cable television company access to the property or from demanding any payment in excess of the set fee, from either the company or the subscribing tenants.

Upon discovery the subcable, the roof cables and equipment, Loretto initiated a class action suit against Teleprompter for damages and injunctive relief. She alleged that

32 N.Y. EXEC. LAW § 828 provides in pertinent part:
1. No landlord shall
   a. interfere with the installation of cable television facilities upon his property or premises, except that a landlord may require:
      i. that the installation of cable television facilities conform to such reasonable conditions as are necessary to protect the safety, functioning and appearance of the premises, and the convenience and well-being of other tenants;
      ii. that the cable television company or the tenant or a combination thereof bear the entire cost of the installation, operation or removal of such facilities; and
      iii. that the cable television company agree to indemnify the landlord for any damage caused by the installation, operation or removal of such facilities.
   b. Demand or accept payment from any tenant, in any form, in exchange for permitting cable television service on or within his property or premises, or from any cable television company in exchange therefor in excess of any amount which the commission shall, by regulation, determine to be reasonable; or
   c. discriminate in rental charges, or otherwise, between tenants who receive cable television and those who do not.

the presence of Teleprompter’s equipment on her property constituted a trespass, and insofar as Teleprompter relied on the authority of section 828, an unconstitutional taking of property without just compensation as proscribed by the fifth and fourteenth amendments. Loretto sought a determination that the grant of a statutory license to permanently occupy private property under section 828 was an invalid exercise of state police power. New York City, which had granted Teleprompter an exclusive franchise to provide cable television service within areas of Manhattan, intervened on behalf of Teleprompter.

The Supreme Court of New York, Special Term, upheld the constitutionality of Section 828 and granted summary judgment to Teleprompter and New York City. The Appellate Division affirmed without opinion. The New York Court of Appeals also upheld the statute with only one justice dissenting. The Court of Appeals rejected plaintiff’s argument that a physical occupation of private property authorized by government was necessarily and automatically a taking. Instead, the Court of Appeals analyzed the dispute by balancing the private and social interests involved to find that the statute was a valid exercise of the state’s police power. It determined that the public interest in the promotion and availability of an important educational and communications medium outweighed the negligible invasion of the plaintiff’s private property. The United States Supreme Court reversed the New York Court of Appeals, holding that the presence of Teleprompter’s equipment on Loretto’s building was a permanent physical occupation authorized by government, and therefore constituted a taking.

The Loretto decision is noteworthy for its introduction of an express per se rule in an area previously devoid of “rigid rules” or “set formulae.” Precedent and traditional ideas of property indicated to the Loretto Court that permanent physical occupations of property by government automatically constituted a taking without regard to factors of public interest or economic impact. This casenote assesses the soundness and potential impact of Loretto’s rule that all permanent physical occupations are takings regardless of public interest or economic impact. First, the history of takings clause jurisprudence is discussed briefly. This

discussion includes an examination of the various tests developed and employed by the Supreme Court in takings decisions. Second, *Loretto's* rationale and justification for the *per se* rule is set forth in detail.\(^{52}\) Third, that rationale is analyzed in light of recent Supreme Court precedent and the purpose of the taking clause.\(^{53}\) It is submitted that *Loretto's* *per se* rule is inconsistent with the modern trend toward the use of a balancing test for the resolution of all takings disputes.\(^{54}\) The Court's contention that a permanent physical occupation of property is qualitatively more harmful to property rights, and that a *per se* rule is required to protect those rights, is also challenged.\(^{55}\) Fourth, the potential impact of the *per se* rule is explored by examining its possible effect on subdivision exactions, specialized land use regulations which require uncompensated permanent physical occupations of private property by the public.\(^{56}\) It is suggested that the *per se* rule may require the invalidation of these useful and important regulations.\(^{57}\) In conclusion it is proposed that the *Loretto* Court should have avoided the affirmation of the *per se* rule and instead employed the multifactor balancing test.\(^{58}\) Such an approach would not only have preserved the cable television regulation in *Loretto*, but also would have avoided the unnecessary creation of a rigid rule with far-reaching and detrimental potential.

I. Taking Clause Jurisprudence

Taking clause jurisprudence has been called a "crazy-quilt pattern of Supreme Court doctrine."\(^{59}\) In its struggle to differentiate compensable takings under the fifth and fourteenth amendments from valid and therefore noncompensable police power regulations, the Court has failed to establish any one test or rule.\(^{60}\) Instead it developed and employed different rationales at different times, and sometimes several at once.\(^{61}\) There seem to be at least three general theories, however, which the Court has used most often and which it still uses to varying degrees. These theories are the physical invasion theory, the diminution in value theory and the multifactor balancing process.\(^{62}\)

A. Physical Invasion

Early decisions distinguished takings from non-takings on the basis of the presence or absence of a physical invasion of private property by government which caused an ouster of the owner.\(^{63}\) The physical invasion, moreover, was usually a permanent invasion

\(^{63}\) Compare, e.g., United States v. Lynah, 188 U.S. 445, 469 (1902) (taking found when govern-
such that the owner was effectively separated from his property and not merely temporarily prohibited from using it. If the government's action merely damaged or impaired the use of private property it did not constitute a taking. To constitute a taking, the government action had to be a permanent invasion of the land, amounting to an appropriation of the land and not merely an injury to the land.

The Court developed this physical invasion test in late-nineteenth–early-twentieth century flooding cases. In those cases, the government was typically sued when the construction of public dams, locks, or canals caused damage to private property. The Court employed the physical invasion test to distinguish compensable from non-compensable losses. Pursuant to this test, a taking was found when the construction caused some material such as water, dirt, or sand to be permanently placed on private property so that the owner's use of the property was effectively destroyed or impaired. In contrast, there was no taking when the construction or structure merely limited accessibility or temporarily impaired the use of private property. Such damages were deemed consequential and non-compensable since there was no physical invasion causing an ouster of possession.
The distinction between takings and non-takings based on the presence or absence of physical occupation of private property causing an ouster of possession is also apparent in another line of cases. These cases involved disputes over repeated rather than permanent interferences with private property. In United States v. Causby and Griggs v. Allegheny County, for example, the Court emphasized that the low-level military flights directly over the claimant's property were tantamount to a physical invasion of the property. According to the Court, any damages caused by the flights resulted from a direct physical invasion of the claimant's domain. The land was taken, in the Court's view, as completely as if it were appropriated for runways for the planes.77

Given the historical distinction between takings and non-takings based on the presence or absence of a physical occupation, the Court consistently upheld mere land use regulations against takings challenges. According to the Court, a regulation or prohibition of a certain use of land, especially a use deemed harmful to the public, was never a taking absent a physical invasion causing an ouster of possession. Consequently, the Court upheld many use regulations that substantially destroyed or impaired the value and use of private property, but did not involve a physical invasion or "ouster." For instance, the Court upheld regulations which prevented the pursuit of certain businesses on private property even though the regulations rendered the property virtually worthless. In such cases, the Court rejected the argument that to prohibit any valuable use of the property was, in essence, to "take" the property because there was no taking in the traditional sense of an ouster of possession. The Court reasoned that nothing was literally or physically taken from the owner; he was merely prevented from using his property in a certain way. In the Court's view, therefore, there was no taking.

77 See, e.g., Griggs v. Allegheny County, 369 U.S. 84, 88-89 (1962) (frequent overflights held a taking); United States v. Causby, 328 U.S. 256, 264-66 (1946) (repeated military flights directly over owner's land that destroyed his chicken farm held a taking); Portsmouth Harbor Land & Hotel Co. v. United States, 260 U.S. 327, 329-30 (1922) (repeated firing of United States artillery guns over claimant's land could be deemed a taking); United States v. Cress, 248 U.S. 316, 328 (1917) (repeated flooding of land caused by government dam held a taking).

80 See, e.g., Hadacheck v. Sebastian, 239 U.S. 394, 405 (1915) (claimant's tract was worth $800,000 for brick making purposes, but its value decreased to no more than $60,000 after enactment of a local law prohibiting operation of the brick yard); Mugler v. Kansas, 123 U.S. 623, 668-69 (1887) (claimant's distillery rendered virtually worthless after enactment of a local law prohibiting sale and manufacture of alcohol).

82 Id.
In sum, the physical invasion requirement enabled the Court to uphold many governmental actions and regulations against taking challenges.83 No matter how great the financial impact of a regulation on an individual, there was no compensable taking absent an accompanying physical occupation and ouster of possession. Although the Court has never expressly overruled the physical invasion test, subsequent and conflicting tests used by the Court make it unclear how much weight this test now carries. In the early twentieth century, for instance, the Court began to invalidate regulations even in the absence of a physical occupation of land if the regulation went "too far" and substantially diminished the value of the property.84

B. Diminution in Value

Under their police power, the states have the authority to regulate property without compensating the owner to protect the health, safety and general welfare of the public.85 These regulations usually take the form of a prohibition of a certain use of property.86 Under the traditional taking, such police power regulations, without an accompanying physical occupation of land, were not takings.87 In the landmark case of Pennsylvania Coal Co. v. Mahon,88 however, Justice Holmes, writing for the Court, introduced the theory that regulation, if it went "too far," could become a taking, even absent a physical appropriation of the land by the government.89

Pennsylvania Coal Co. involved a state law which made it commercially impracticable for a coal company to mine its coal.90 The Court invalidated the law as an unconstitutional taking of property without compensation even though the coal was never physically taken or appropriated by the state.91 The Court reasoned that to make it impossible to mine the coal was as much a taking as if the state had appropriated the coal for its own use without payment.92 Justice Holmes suggested that the distinction between a valid police power regulation and a compensable taking was one of degree rather than form.93 Thus, at some

83 See cases cited supra note 78.
84 See Pennsylvania Coal Co. v Mahon, 260 U.S. 393, 415 (1922).
85 Berman v. Parker, 348 U.S. 26, 32 (1954). There the Court stated: An attempt to define [the police power's] reach or trace its outer limits is fruitless. . . . The definition is essentially the product of legislative determinations addressed to the purposes of government, purposes neither abstractly nor historically capable of complete definition. . . . Public safety, public health, morality, peace and quiet, law and order — these are some of the more conspicuous examples of the traditional application of the police power to municipal affairs.

89 260 U.S. 393 (1922).
90 Id. at 415.
91 Id. at 412-15. The Pennsylvania Coal Co. had sold property to home builders but retained the title and right to mine any coal located below the surface. Id. at 412-13. When the company proposed to exercise this right and necessarily cause the collapse of the houses built on the surface, the legislature passed an emergency measure prohibiting the mining of coal within so many feet of residential buildings. Id. It was this legislation that the Supreme Court struck down as an unconstitutional taking of private property. Id. at 414-15.
92 Id.
93 Id. at 416.
point, according to Holmes, a regulation could go "too far" and become a taking. He suggested that the determination of the point at which a regulation became a taking depended upon an evaluation of the particular facts of each case. In Pennsylvania Coal Co., Holmes apparently evaluated the facts by weighing the public interest in the regulation against the extent of the "taking" caused by the regulation. In so doing, he expressly identified the diminution in property value resulting from the regulation as one important fact in his evaluation. Justice Holmes noted that when the financial loss caused by the regulation reached a certain magnitude the enforcement of the law required an exercise of eminent domain and compensation. Accordingly, the Court in Pennsylvania Coal Co. invalidated the Pennsylvania law which did not appropriate, but did prohibit the mining of certain valuable coal.

Despite the apparent disparity between Pennsylvania Coal Co. and earlier precedent holding that mere land use regulation was never a taking absent a physical occupation and ouster, Pennsylvania Coal Co. did not expressly overturn earlier precedent. In fact, the Court still cites both lines of precedent authoritatively, and often in the same case. Consequently, it is unclear how much weight the diminution in value test should be accorded, especially since still later precedent has indicated that diminution in property value alone is often insufficient to constitute a taking. Nevertheless, the extent of a regulation's impact on property value is an important factor in the third test used by the Court, the modern balancing test.

C. Balancing Test

As in Pennsylvania Coal Co., the Court in Penn Central Transportation Company v. New York City acknowledged that a regulation of property could become so excessive as to constitute a taking. The Court refused to find, however, that the designation of Grand Central Station as an historic landmark and the Landmark Preservation Committee's subsequent veto of a proposed addition to the terminal constituted a taking. The Penn Central Court reiterated Holmes' statement in Pennsylvania Coal Co. that whether a taking was found would depend on the particular facts of the case. The Court in Pennsylvania

101 The Court merely stated: "We regard this as going beyond any of the cases decided by this Court." 260 U.S. at 416. For an additional discussion of Pennsylvania Coal Co.'s departure from the trend, see Sax, supra note 13, at 41.
102 See supra notes 11-13 and accompanying text.
103 Penn Central Transp. Co. v. New York City, 438 U.S. 104, 131 (1981). There the Court stated that: "... decisions sustaining ... land use regulations, which, ... are reasonably related to the promotion of the general welfare, uniformly reject the proposition that diminution in property value, standing alone, can establish a 'taking.' " Id. (citations omitted).
104 See infra notes 112-15 and accompanying text.
106 Id. at 127-28.
107 Id. at 123.
108 Id. at 124.
Coal Co. had identified only one factor of particular significance, namely the extent of regulation's impact on the value of the regulated property. The Court in Penn Central, however, identified three factors of special importance in what it called an "ad hoc factual" taking inquiry. These three factors were: 1) the severity of the economic impact of the regulation on the claimant; 2) the regulation's interference with the claimant's distinct investment-backed expectations; and 3) the character of the government action.

In elaborating on the "economic impact" factor, the Court noted that many government regulations had been upheld in the past even though they adversely affected recognized private property interests. The Court suggested that such regulations were often upheld because a state tribunal had reasonably concluded that the welfare of the public would be promoted by the regulation. The Court did note that a use regulation might constitute a "taking" if not reasonably necessary to promote a substantial public purpose, or if it had "an unduly harsh impact" on the owner's use of his property. A diminution in property value alone, caused by a regulation reasonably related to the public welfare, however, could not establish a taking. In those contexts, the Court focused not on the diminution in property value, but on the alternative uses the regulation still allowed.

The second important factor considered by the Penn Central Court was the regulation's effect on the claimant's distinct investment backed expectations. The Court explained this factor with the example of Pennsylvania Coal Co. According to the Penn Central Court, Pennsylvania Coal Co. was the leading case standing for the proposition that a regulation, though it substantially furthered an important public purpose, might so frustrate an owner's expected return on his investment in property, that it constituted a taking. In Pennsylvania Coal Co., for instance, a coal company had sold its property but specifically reserved title and mining rights to the underlying coal. A subsequent state law prevented the coal company from exercising these rights and effectively denied the company access to its coal. A subsequent state law prevented the coal company from exercising these rights and effectively denied the company access to its coal. According to the Penn Central Court, that law constituted a taking because it interfered with the owner's distinct investment-backed expectations in its property. The company had expressly reserved title to the coal with the expectation that it would be able to exercise its property rights and remove the coal at a future date.

In determining when a regulation constituted a taking, the Penn Central Court examined a third factor, the character of the government action. The Court stated that

it was more apt to find a taking when the action could be characterized as a physical invasion by government rather than as a government program to adjust the benefits and burdens of economic life to promote the common good. The Court implied that the distinction between the two was that in the first instance, the government was acting in its "enterprise" capacity to acquire land for a specific government function, such as government military air flights. In the second situation, however, the government was merely adjusting private interests through programs like zoning laws, such that the common good was promoted. It was not appropriating property for a government enterprise; thus, there was no taking according to the Court in Penn Central.

The Court employed the multifactor balancing test to analyze the challenged law in Penn Central. The case involved a dispute over the addition of an office tower to New York's Grand Central Terminal. Since Grand Central had been declared an historic landmark under New York City's Landmarks Preservation Law ("Landmarks Law"), the New York City Landmarks Preservation Commission had authority to veto any proposed structural changes to the building. Pursuant to this authority, the Commission had rejected the proposed addition to the terminal. The owner, Penn Central, then contested the Landmarks Law as constituting a taking of its property without compensation.

In applying the balancing test, the Court weighed the public interest in the preservation of historic and aesthetic buildings against the character of the government action, the economic impact of the regulation on Penn Central, and its interference with Penn Central's investment-backed expectation in Grand Central Station. First, the Court characterized the government action in Penn Central as a program to adjust the benefits and burdens of economic life such that the common good was promoted. The government, according to the New York City Council, was attempting to preserve historic buildings for the benefit of all New Yorkers. It was not attempting to appropriate the space above the claimant's property for its own use as in United States v. Causby. Thus, in the Court's view, the Landmarks Law was more like a zoning law designed to promote the

general welfare than an appropriation of private property for a government purpose. The New York law, according to the Court, merely prevented the owner or anyone else from occupying certain airspace above its property. The government did not thereby appropriate the airspace and destroy the use of the property below as in United States v. Causby.

Secondly, the Court found that the economic impact of the law on the claimant was not determinative of a taking. Since a diminution in property value alone did not establish a taking, the Court focused on the uses that the regulation still permitted. The Court found that the New York City law did not interfere with the claimant's present use of his building. In fact, the law contemplated that the building would continue to be used as it had been for the past sixty-five years. Moreover, with respect to the third factor, namely the interference with investment-backed expectations, the Court noted that the law did not prohibit Penn Central's primary expectation that its property would be used as a train terminal. Neither did it prohibit absolutely all additions to the terminal, but only additions not approved by the Commission. According to the Court, the claimant might reformulate its plan and seek approval for a smaller structure more in harmony with the Commission's ideas. The Court concluded that the Landmarks Law did not constitute a taking. The restrictions imposed on the claimant's property rights were substantially related to the promotion of the general welfare in the Court's view, and were not so severe that they prohibited all reasonable use of the property.

The ad hoc balancing process of Penn Central has been employed by the Court in subsequent cases. In one case, PruneYard Shopping Center v. Robins, the Court found that a physical invasion of a private shopping mall by solicitors exercising state constitutional rights of free speech and petition did not constitute a taking. Absent evidence of a concomitant adverse economic impact, the Court regarded the physical invasion of the property as not itself determinative of a taking. In a second case, Kaiser Aetna v. United States, the Court found that a governmental attempt to secure a public right of passage in a navigable channel dredged and owned by a private party did constitute a taking. According to the Court, the government's action seriously interfered with the claimant's distinct investment-backed expectations. The action went far beyond ordinary regula-

tion and amounted to a substantial devaluation of private property. The Court stated that the claimant's expectation that he would be able to exclude non-paying users from the channel was a property interest. In the Court's view, the government could not take that property without providing compensation.

In sum, the Court has often recognized that there are no set formulae of rigid rules in a taking analysis. Rather, Penn Central and its progeny have shown a trend towards the use of a balancing inquiry in which the Court examines the public interest in the regulation, the type of regulation and the severity of the regulation's impact. Although the Court has observed that a regulation may curtail some use or economic benefit of private property, the Court has stated that a regulation may not survive a taking challenge if it serves no reasonable public interest, or if it has an unduly harsh impact on the claimant. The Court has also observed, however, that government could not go on if it were forced to pay for every new law which affected private property. In the final analysis, therefore, the resolution of a taking dispute depends ultimately on an exercise of judgment and an application of logic that promotes justice and fairness. Until Loretto, it appeared that the recent trend of the Court was to base its judgment on an assessment of the public interest in the regulation and the severity of its impact. See also PruneYard, 447 U.S. at 84, which characterizes the attempt in Kaiser Aetna to create a public right of access to plaintiffs' improved pond as an interference with plaintiffs' "reasonable investment backed expectations." Id.

Kaiser Aetna, 444 U.S. at 178. "Here, the Government's attempt to create a public right of access to the improved pond goes so far beyond ordinary regulation or improvement for navigation as to amount to a taking under the logic of Pennsylvania Coal Co. v. Mahon." Id.

Allard, 444 U.S. 51, 65 (1979) ("There is no abstract or fixed point at which judicial intervention under the Takings Clause becomes appropriate."); Penn Central Transp. Co. v. City of New York, 438 U.S. at 124; Goldblatt v. Town of Hempstead, 369 U.S. 590, 594 (1962); Pennsylvania Coal Co. v. Mahon, 260 U.S. at 413 ("the question depends upon the particular facts.").

Loretto v. Teleprompter Manhattan CATV Corp., 458 U.S. 419, 442 (1982) (Blackmun, J., dissenting). "In sum, history teaches that takings claims are properly evaluated under a multifactor balancing test." Id.

Suffice it to say that government regulation — by definition — involves the adjustment of rights for the public good. Often this adjustment curtails some potential for the use or economic exploitation of private property. To require compensation in all such circumstances would effectively compel the government to regulate by purchase. "Government hardly could go on if to some extent values incident to property could not be diminished without paying for every such change in the general law." (quoting Pennsylvania Coal Co. v. Mahon, 260 U.S. 393, 413 (1922)).

and balancing of all the factors involved in a taking dispute, and not merely on whether the regulation caused a permanent physical occupation.\textsuperscript{105}

II. RATIONALE OF LORETTO V. TELEPROMPTER MANHATTAN CATV CORP.

A. The Majority Opinion

In Loretto v. Teleprompter Manhattan CATV Corp.,\textsuperscript{106} Justice Marshall, writing for the Court, affirmed a \textit{per se} rule that any permanent physical occupation of private property by government was automatically a taking without regard to other factors such as the regulation's economic impact or the public interest in the regulation.\textsuperscript{107} Thus, in \textit{Loretto} the Court found that a New York State law authorizing the installation of cable television equipment on a privately owned apartment building constituted a taking.\textsuperscript{108}

The Court began its examination of the claim that the action authorized by the statute constituted a taking by setting forth broad principles governing takings clause analysis. The Court acknowledged that no set formula or rigid rule existed to determine when a governmental action or regulation constituted a taking.\textsuperscript{109} It observed that ordinarily the Court engaged in an \textit{ad hoc} factual inquiry, examining the factors identified in \textit{Penn Central}, namely, the economic impact of the regulation, its interference with investment-backed expectations and the character of the government action.\textsuperscript{110} The Court also recognized that prior decisions had upheld substantial regulation of private property against taking challenges if the regulation was deemed to be reasonably related to the promotion of a substantial public interest.\textsuperscript{111} The \textit{Loretto} Court, however, regarded physical intrusion as a property restriction of an unusually serious character. When the physical intrusion reached the extreme form of a permanent physical occupation, a taking automatically occurred, according to the Court.\textsuperscript{112} The Court regarded a permanent physical occupation not just as an important factor in a taking analysis, but as the determinative one.\textsuperscript{113}

After establishing that a permanent physical occupation constituted a taking, the Court turned to a discussion of the reasons underlying this rule. First, the Court surveyed previous cases involving the question of when government action constituted a taking.\textsuperscript{114} Implicit in these cases, in the Court's view, was a distinction between government actions involving a permanent physical occupation of property and those involving either

\textsuperscript{105} \textit{Loretto}, 458 U.S. at 447 (Blackmun, J., dissenting). "Precisely because the extent to which the government may injure private interests now depends so little on whether or not it has authorized a 'physical contact,' the Court has avoided \textit{per se} takings rules resting on outdated distinctions between physical and non-physical intrusions." \textit{Id.}

\textsuperscript{106} 458 U.S. 419 (1982).

\textsuperscript{107} \textit{Id.} at 426.

\textsuperscript{108} \textit{Id.} at 425.

\textsuperscript{109} \textit{Id.} at 426.

\textsuperscript{110} \textit{Id.}

\textsuperscript{111} \textit{Id.}

\textsuperscript{112} \textit{Id.} The court stated: "Our cases further establish that when the physical intrusion reaches the extreme form of a permanent physical occupation, a taking has occurred. In such a case, the character of the 'government action' not only is an important factor in resolving whether the action works a taking but is determinative." \textit{Id.}

\textsuperscript{113} \textit{Id.}

\textsuperscript{114} \textit{Id.} at 426-36.
a temporary invasion or damage with no accompanying occupation. According to the Court, previous cases established that a taking automatically occurred in the former situation. The public interest in such a regulation or its minimal economic impact was irrelevant. The majority stated that the Court had never failed to find a taking when presented with a permanent physical occupation of property. The distinction between permanent physical occupations and temporary invasions, the majority observed, was present in the nineteenth century flooding cases. It noted that a taking was found in these cases only when property was permanently inundated with water or other material so as to permanently destroy or impair the land's usefulness. If the impairment was temporary or if it was the consequence of some action carried on by the government outside the property, a taking was never found according to the Loretto Court. The Court also noted that later cases clearly established that the permanent occupation of land by such installations as telephone lines, telegraph wires and underground pipes were takings regardless of the insubstantial space occupied or the lack of interference with the owner's use of his land.

Continuing its analysis of precedent, the Loretto Court found that recent precedent recognized the traditional distinction between permanent physical occupations, physical invasion short of an occupation, and mere regulation of land use. The Court conceded that the most recent cases stated or implied that a physical invasion was subject to a "balancing process." In the Court's view, however, these cases did not imply that a permanent physical occupation was ever subject to such a balancing process. The Court pointed out that the most recent cases had not dealt with a regulation which involved a permanent physical occupation. Thus, in Loretto, the Court determined that recent precedent applied only to cases involving physical invasions short of a permanent physical occupation, or to non-possessory regulations of land use. According to the Court,

175 Id. at 430. "[R]ecent cases confirm the distinction between a permanent physical occupation, a physical invasion short of an occupation, and a regulation that merely restricts the use of property." Id.

176 Id. at 434-35. In short, when the "character of the governmental action" Penn Central, 438 U.S. at 124, 98 S. Ct. at 2659, is a permanent physical occupation of property, our cases uniformly have found a taking to the extent of the occupation, without regard to whether the action achieves an important public benefit or has only minimal economic impact on the owner.

458 U.S. at 434-35.

177 458 U.S. at 427. "When faced with a constitutional challenge to a permanent physical occupation of real property, the Court has invariably found a taking." Id.

178 Id. at 427-28.

179 Id. at 428.

180 Id. The court said:

Since these early cases, this Court has consistently distinguished between flooding cases involving a permanent physical occupation, on the one hand, and cases involving a more temporary invasion, or government action outside the owner's property, that causes consequential damages within, on the other. A taking has always been found only in the former situation.

recent precedent did not affect the traditional rule that a permanent physical occupation was a taking per se.\(^{187}\) On the contrary, in the Court’s opinion, recent cases emphasized that physical invasion cases were special.\(^{188}\) For example, the \textit{Loretto} majority indicated that the Court’s most recent “complete discussion” of the takings clause in \textit{Penn Central Transportation Co. v. New York City}, did not repudiate the rule that a permanent physical occupation of property was a taking \textit{per se}.\(^{189}\) Moreover, \textit{Kaiser Aetna v. United States}, while not addressing a permanent physical occupation, did indicate, in the \textit{Loretto} Court’s view, that physical invasion by government was a particularly serious type of property regulation.\(^{190}\) The Court also detected the distinction between permanent occupations and temporary invasions in \textit{PruneYard Shopping Center v. Robins}, and used it to distinguish \textit{PruneYard} from the facts in \textit{Loretto}.\(^{191}\) The \textit{Loretto} Court pointed out that the physical invasion in \textit{PruneYard} had not been determinative of a taking because it was temporary in nature. The property owner, moreover, was able to regulate the time, place and manner of the invasion so as to minimize interference with his business.\(^{192}\) Unlike \textit{Loretto}, \textit{PruneYard} did not involve a permanent physical occupation and therefore did not affect the traditional rule embraced by the majority, that a permanent physical occupation was always a taking.\(^{193}\)

Upon concluding its analysis of precedent, the Court examined a second reason supporting its decision, the purpose of the taking clause. According to the \textit{Loretto} Court, the taking clause was designed to protect property interests.\(^{194}\) The Court emphasized that an owner’s ability to possess, use, and dispose of his property were the most treasured strands of the traditional bundle of private property rights.\(^{195}\) In the Court’s view, a permanent physical occupation by a stranger was the most serious, and qualitatively, the most severe interference with each of those rights.\(^{196}\) Those protected rights, moreover, extended to as much space above the ground as the owner could use or occupy.\(^{197}\) Thus, it

\(^{194}\) Id. at 435.
\(^{195}\) Id. at 435-36.
\(^{196}\) Id. at 435. The Court explained its view as follows:
To the extent that the government permanently occupies physical property, it effectively destroys each of these rights. First, the owner has no right to possess the occupied space himself, and also has no power to exclude the occupier from possession and use of the space. . . . Second, the permanent physical occupation of property forever denies the owner any power to control the use of the property; . . . Finally, even though the owner may retain the bare legal right to dispose of the occupied space by transfer or sale, the permanent occupation of that space by a stranger will ordinarily empty the right of any value . . . .
\(^{197}\) Id. (citations omitted).
\(^{197}\) Id. at 438 n.16 (quoting \textit{United States v. Causby}, 328 U.S. 256, 264 (1946)).
was irrelevant to the Loretto Court that the amount of space occupied was minimal and that the plaintiff had not previously used that space. In the Court’s view the relevant factor was the existence of any permanent physical invasion, no matter how inconsequential.

Finally, in addition to its consistency with the purpose of the taking clause, the Court also suggested that the per se rule avoided difficult line-drawing problems. By deeming every permanent physical occupation of property a taking, the Court would not have to engage in disputes over whether an occupation was significant enough to constitute a taking. The rule, moreover, presented few problems of proof in the Court’s view. A permanent physical occupation was easily identified. While the extent of the occupation was a relevant factor in determining the amount of compensation due, it was not important in determining whether a taking had occurred. A claimant need only show that the placement of a fixed structure on land had occurred. According to the Court, such a fact was rarely subject to dispute.

After establishing that a per se rule would apply to permanent physical occupations of property, the Court rejected Teleprompter’s attempt to justify section 828 as a permissible regulation of the use of rental property. The Court rejected Teleprompter’s argument that the New York law prohibiting landlords from interfering with the installation of cable television equipment was similar to other rental property regulations which had survived takings challenges. The distinction, according to the Court, was that section 828 authorized a third party, a stranger, to occupy space on the owner’s building. The Court had already emphasized that an invasion by a stranger was qualitatively more severe than that caused by other regulations. Thus, in the Loretto majority’s view, section 828 was not analogous to rental property regulations which allowed a landlord to retain control and possession of the installations and the space they occupied. Valid regulations did not require the landlord to tolerate a physical occupation of his property by a third party. Consequently, in the Court’s view, rental property regulations and section 828 were distinguishable. While the first were appropriately analyzed under the multifactor balancing test, section 828 was subject to a per se rule since it authorized a permanent physical occupation of property by a third party.

In summary the Court held that a permanent physical occupation was a taking because the owner entertained an historically rooted expectation of compensation. In

addition, the character of the invasion caused by a permanent occupation was qualitatively more severe than other categories of property regulation. The Court expressly stated that its decision did not question a state's broad power to impose use restrictions on private property.

B. The Dissenting Opinion in Loretto

Justice Blackmun, joined by Justices Brennan and White, wrote the dissenting opinion. Justice Blackmun called the majority opinion a "curiously anachronistic decision." The dissent rejected the Court's conclusion that the per se rule was strongly grounded in precedent. In the dissent's view, the early precedent cited by the Court lacked any vitality outside the agrarian context in which it was decided and stood for a constitutional rule that was unsuited to a modern urban age. In contrast, the dissent asserted, history indicated that takings claims were properly evaluated under a multifactor balancing test. Recent precedent, the dissent maintained, expressly held that a minor physical intrusion was not determinative of a taking. Consequently, the dissent agreed with the New York Court of Appeals' straightforward application of the balancing test, and its finding that section 828 was a valid police power regulation designed to protect the interests of both landlords and tenants, while promoting the development of cable television. The dissent observed that the economic impact of the physical occupation in Loretto was minimal. Teleprompter's cables did not affect the value of the property, nor did they interfere with the plaintiff's investment-backed expectations since she was unaware of their existence when she invested in the building. In the dissent's view, therefore, such a minor physical intrusion did not constitute a taking under the balancing test.

In addition to finding the per se rule inconsistent with precedent, the dissent also implied that the rule's capacity to distinguish between significant and insignificant losses was minimal. According to the dissent, recent applicable precedent indicated that non-physical intrusions such as those caused by zoning laws, were the rule rather than the exception. The dissent emphasized that such modern non-physical intrusions were capable of imposing a far greater adverse economic impact on a property owner than that inflicted by minor physical touchings. Per se rules, the dissent suggested, had been avoided precisely because the amount of loss suffered by a property owner depended so little on whether or not the intrusion was a physical one.

225 Id.
226 Id.
The dissent also rejected the Court’s distinction between permanent physical occupations and temporary physical invasions.\textsuperscript{229} The minority suggested that the distinction was strained and untenable, and had been erected merely to distinguish \textit{Loretto} from recent precedent.\textsuperscript{230} Precedent, the dissent asserted, no longer recognized a distinction between physical and nonphysical interferences with property.\textsuperscript{231} Thus, for the majority to draw an even finer distinction between permanent and temporary physical invasions was untenable in the dissent’s view.\textsuperscript{232} The dissent insisted the distinction was without substance, ambiguous and subject to manipulation by litigants.\textsuperscript{233} The minority opinion also pointed out that an invasion’s “permanence” was subject to dispute.\textsuperscript{234} Even the occupation in \textit{Loretto} was arguably temporary since it lasted only so long as the building was maintained as rental property, and not forever.\textsuperscript{235} Thus, the dissent feared that the creation of the distinction would merely encourage litigants to mold otherwise insubstantial claims into the set formula of the \textit{per se} rule\textsuperscript{236} and reduce taking analyses into metaphysical disputes over what was physical and what was temporary.\textsuperscript{237}

Lastly, the dissent rejected the Court’s assertion that section 828 was subject to a \textit{per se} rule merely because it substantially interfered with property rights.\textsuperscript{238} In the dissent’s opinion, section 828 differed very little from other New York rental property regulations which had been upheld against takings challenges.\textsuperscript{239} Many of those regulations interfered with a landlord’s property rights as much, if not more than, section 828.\textsuperscript{240} For example, the dissent noted that landlords were required to install mailboxes which occupied more than five times the space that Teleprompter’s cables did.\textsuperscript{241} A landlord’s ability to use, occupy, or sell his property was affected no more adversely by section 828 than by these other rental property regulations.\textsuperscript{242} Nor was their impact any less severe, in the dissent’s view, because they allowed the landlord and not a third party to make and maintain the installation.\textsuperscript{243} The dissent emphasized, moreover, that the appellant had admitted that she actually had no other use for the cable occupied space.\textsuperscript{244} In the dissent’s view, the Court’s inquiry should be focused on the extent of the invasion’s interference with the owner’s property use and not solely on whether an invasion had occurred.\textsuperscript{245} Thus, since the interference authorized by section 828 was similar, and in some cases less severe, than that authorized by other valid rental property regulations,\textsuperscript{246} the dissent saw no reason to differentiate the two merely because under section 828 a
third party was the authorized occupant.\textsuperscript{247} Indeed, in the dissent’s view, a landlord was almost better off under section 828 because the cable television company and not the owner, was obligated to pay all expenses of installation, maintenance and removal.\textsuperscript{248}

In sum, the dissent viewed the affirmation of the \textit{per se} rule by the Court as an unnecessary and potentially dangerous undermining of well-planned legislation.\textsuperscript{249} It viewed section 828 as a careful response to a modern social problem and a new way of living.\textsuperscript{250} To the dissent, the \textit{per se} rule was antiquated and unsuited to the solution of problems precipitated by new technological advances such as cable television.\textsuperscript{251} The dissent would have analyzed \textit{Loretto} under the multifactor balancing test in accordance with the New York Court of Appeals.\textsuperscript{252}

III. \textbf{ANALYSIS OF \textit{LORETTO} v. \textit{T}ELEPROMPTER \textit{M}ANHATTAN \textit{C}ATV \textit{C}ORP.}

In \textit{Loretto} the Supreme Court affirmed the rule that all regulations authorizing any permanent occupation of private property by government were takings without regard to the public interest served by the regulation or its negligible economic impact on the regulated property owner.\textsuperscript{253} The Court based its rule on what it called a long line of precedent and on its concern for the protection of traditional property rights.\textsuperscript{254} The next section analyzes the Court’s reasoning in \textit{Loretto}. First, recent taking clause decisions are examined.\textsuperscript{255} The \textit{Loretto} majority’s conclusion that precedent supports the \textit{per se} rule is evaluated.\textsuperscript{256} It is suggested that \textit{Loretto} is actually inconsistent with the recent trend towards the use of a multifactor balancing test in all takings disputes regardless of the presence or absence of a permanent physical occupation.\textsuperscript{257} Recent decisions have indicated that non-possessory regulations are so prevalent in our modern society that a test based solely on the presence of a permanent physical occupation would be inadequate and perhaps even inequitable.\textsuperscript{258} Second, the Court’s contention that the protection of traditional property rights is served by the \textit{per se} rule is examined.\textsuperscript{259} It is demonstrated that non-possessory regulations may be just as harmful to property rights as regulations authorizing permanent physical occupations.\textsuperscript{260} The distinction between takings and non-takings should thus be based on the extent of the interference with property rights and not simply whether there has been a partial eviction.\textsuperscript{261} Finally, it is suggested that the \textit{per se} rule may have a disastrous impact on some well-reasoned and useful regulations.\textsuperscript{262} In particular, the rule may mandate the invalidation of subdivision exactions, a specialized regulation requiring the occupation of subdivision development property by such

\textsuperscript{262} See infra notes 346-414 and accompanying text.
facilities as sidewalks, roads, and parks. In conclusion, it is suggested that the Loretto Court should have avoided the affirmation of the per se rule and analyzed the dispute under the multifactor balancing test, or even under the rationale used by the lower courts to uphold subdivision exactions.

A. The Per Se Rule's Inconsistency with Recent Taking Doctrine

The Loretto majority maintained that its per se rule and its distinction between permanent occupations and temporary invasions had been established in earlier cases. Precedent does not, however, actually define a distinction between permanent occupations and temporary invasions. A per se rule moreover is inconsistent with recent taking doctrine and with the implicit policy underlying modern taking analysis.

The distinction between permanent physical occupations and temporary physical invasions, upon which Loretto's per se rule is based, may have had some merit at one time. For instance, in the nineteenth century flooding cases cited in Loretto, a taking occurred only when the government's physical invasion of private property amounted to a permanent ouster of possession. Government actions or regulations which merely impaired or prohibited the use of property were usually not so extreme as to cause an ouster of possession. Consequently, the Court never invalidated non-possessory government regulations as takings, regardless of their economic impact, under the old test. Rather, in order to establish a compensable taking, a claimant had to prove that the government regulation or action caused some physical occupation of a permanent nature, much like those occasioned when the government pursued formal eminent domain proceedings.

For example, the Court found no taking when a temporary dam cut off an owner's access to his shipping docks. The Court did find a taking, however, when a permanent dam caused a back-up of flood waters which permanently inundated the claimant's land and ousted him from possession. In the first instance there was no taking because there was no permanent separation of the owner from his property. His access to it, and his use of it were merely impaired. In the second instance, however, there was a taking because the government action had risen to the extreme form of a permanent physical invasion of property, almost as if the government had formally condemned and appropriated the land under an eminent domain proceeding. While mere regulations or temporary impairments were never takings under the old rule regardless of their economic impact, permanent physical ousters were considered such extreme interferences with property rights that they rose to the level of a taking. Consequently, the distinction between temporary invasions and permanent occupations could mean the difference between a taking and a non-taking under the old rule.

In an agrarian society where land was synonymous with wealth, a rule based solely on the presence or absence of a permanent physical loss of land may have been appropriate. At that time land use regulations were rare and a simple rule was probably sufficient to compensate many of the worst harms. With the turn of the century, however, increased urban populations required the development of additional restrictions on the use and occupation of private lands in urban communities. The old rule that a taking required a showing of a permanent physical ouster became inadequate in a new era where significant harm was increasingly caused by non-possessory regulations. Consequently, logic demanded a departure from the distinction between permanent occupations and temporary invasions, upon which the old rule was based. Indeed a new approach to taking analyses was introduced in Pennsylvania Coal Co. v. Mahon.

Justice Holmes, writing for the Court in Pennsylvania Coal Co., introduced the idea that the difference between valid police power regulations and unconstitutional takings was one of degree, not form. If a regulation went "too far," according to Holmes, and if it diminished the value of the regulated property beyond a certain magnitude, it became a taking. This approach freed the Court from a literal interpretation of the taking clause. The term "property" increasingly was perceived as more than just the physical, tangible piece of real estate. Instead, "property" began to be interpreted as the group of rights inhering in the citizen's relation to the physical thing. A person's right to possess, use, and dispose of his land was his "property." Hence, the complete destruction of those rights, even absent a permanent physical occupation, was often recognized as a taking of "property."

Indeed, subsequent case law which elaborated on Holmes' suggestion that takings disputes should be analyzed on an ad hoc basis implied that physical and non-physical interferences with property would be analyzed in the same manner. In Penn Central, for example, the Court expressly noted that set formulae and rigid rules did not exist in

One of the earliest controversies to emerge in the law of eminent domain centered around the meaning to be read into the phrase "taking of property." The Supreme Court, and many state courts, originally thought of "property" as land itself or some other tangible object of ownership. This physical approach also extended to the word "taking." Owing largely, no doubt, to the connotation of the word itself, "taking" was thought to mean a taking over, an appropriation of the property by the taker for the latter's own use.

taking analyses. On the contrary, according to Penn Central, the Court should engage in an ad hoc factual inquiry into such factors as the regulation's impact on the owner, its interference with investment-backed expectations, and the character of the government action. In Penn Central the Court noted that if the government action could be characterized as a physical invasion, it was more likely that a taking would be found, but not that it must be found. Penn Central therefore implied that a physical invasion alone did not constitute a taking. Factors such as the economic impact of the regulation and the public interest it served were also relevant.

Furthermore, in PruneYard Shopping Center v. Robins, the Court expressly refused to find that a physical invasion of private property pursuant to a state constitutional right was determinative of a taking. In PruneYard, because there was no proof that a physical invasion of a privately owned shopping mall by solicitors also caused an adverse economic impact on the owner, the Court found that a taking had not been established. Thus, Penn Central, PruneYard and other recent cases indicate that a physical invasion is one of the factors of a taking analysis, but not necessarily the determinative one. In fact, in citing PruneYard, the Loretto majority acknowledged that physical invasions alone were not always determinative of a taking. The Court distinguished the activity in PruneYard, however, by characterizing it as a temporary physical invasion subject to the balancing test, rather than a permanent physical occupation which would have been a taking per se.

The Court in Loretto was able to avoid the balancing test dictated by PruneYard only by erecting this distinction between permanent and temporary invasions. This distinction, however, is not supported by recent precedent. On the contrary, as Loretto tacitly acknowledged, recent precedent indicated that distinctions between physical and non-physical intrusions were no longer the sole criterion in resolving takings disputes. Accordingly, an even finer distinction between temporary and permanent physical occupations alone is even less helpful in identifying compensable takings. Consequently, Loretto's establishment of a modern distinction between types of physical invasions as well as its

294 Id. at 442 (Blackmun, J., dissenting).
295 Id. at 447-48 (Blackmun, J., dissenting). As the dissent stated:

'The Court draws an even finer distinction today — between "temporary physical invasions" and "permanent physical occupations" ... an examination of each of the three words in the Court's "permanent physical occupation" formula illustrates that the newly-created distinction is even less substantial than the distinction between physical and non-physical intrusions that the Court already has rejected.

Id.
establishment of a modern *per se* rule seem inconsistent with the trend toward the use of the balancing test in all recent takings disputes.\(^{296}\)

In developing the balancing test, the Court implicitly recognized that a rule based solely on the presence or absence of a permanent physical invasion was inequitable. Such a rule would compensate only the few landowners who suffered a permanent physical invasion of their property, but would leave a great number of landowners who had suffered real economic harm uncompensated merely because the particular regulation did not require a permanent physical invasion. The creation of the multifactor balancing test indicated that public and private interests should be balanced to determine whether a regulation's interference with property rights is so excessive as to constitute a taking. According to *Loretto*, however, if a regulation requires or authorizes a permanent physical occupation a taking has occurred and the Court need not examine such factors as the public interest served by the regulation or its minimal interference with private interests.\(^{297}\) The presence of a permanent physical occupation alone is enough to invalidate a regulation as a taking.\(^{298}\) In contrast, the individual whose property is subjected to a regulation which prohibits a certain use, or causes a temporary physical invasion, is not entitled to such automatic satisfaction according to *Loretto*.\(^{299}\) Rather, in the absence of a permanent occupation, all other challenged regulations remain subject to the more complex multifactor balancing test in which the public interest and the extent of the regulation's economic impact are relevant factors. Recent case law indicates, moreover, that the claimant must show either that the economic impact of a challenged regulation was unduly harsh\(^{300}\) or that it served no reasonable public interest.\(^{301}\) In most instances the legislative judgment as to what constitutes an important public interest will be respected by the Court, making it difficult for a claimant to prove otherwise.\(^{302}\)

The *per se* rule announced in *Loretto* promotes the inequity of automatically compensating some landowners for a minor physical occupation while forcing others to shoulder the financial burden of public programs which do not cause a physical occupation. The oft-stated purpose of the fifth amendment's taking clause is to insure that some people alone do not bear public burdens which in all fairness and justice should be borne by the public as a whole.\(^{303}\) The disparity of rewarding some landowners such as Loretto, for negligible invasions of their property while forcing others to bear sizable economic losses, is unfair and unjust. It has been suggested that the distinction between valid police power regulations and unconstitutional taking should depend on the extent and economic impact of the action and not on whether a partial eviction has occurred.\(^{304}\) Otherwise, to enforce the *per se* rule is to establish a rule which requires compensation in many cases when the loss is insignificant in return for a bright line rule that identifies some, but by no

means all, compensable takings.\textsuperscript{305} The allegedly superior protection of treasured property rights afforded by the \textit{per se} rule\textsuperscript{306} as well as the advantage of easy administration,\textsuperscript{307} do not justify the disparity and inequity promoted by the \textit{per se} rule.

### B. Traditional Property Rights

In addition to precedent, the Court in \textit{Loretto} based its decision on the purpose behind the takings clause to protect the traditional property rights of possession, use and disposition.\textsuperscript{308} In its view, a permanent physical occupation effectively destroyed each of these rights.\textsuperscript{309} Accordingly, a \textit{per se} rule was necessary to protect them.\textsuperscript{310} Although these traditional property rights are the basis of any taking analysis, it is not clear that a permanent physical occupation necessarily interferes with them to a greater extent than other types of invasions or use regulations, or that a \textit{per se} rule will more effectively protect them. On the contrary, the \textit{per se} rule may not further their protection so much as it may reduce taking disputes to formalistic quibbles over the distinction between a permanent physical occupation and a temporary physical invasion.\textsuperscript{311} In addition, the \textit{per se} rule may cause the automatic invalidation of carefully planned legislation designed to promote the common good.

Many non-possessory regulations or temporary invasions can effectively destroy or impair property rights such that an owner sustains a real economic loss.\textsuperscript{312} Yet such regulations have been upheld as valid police power measures to insure the public welfare.\textsuperscript{313} For instance, the Court has upheld regulations which prohibited the most valuable use of property, sometimes decreasing the market value of the property up to almost 88%.\textsuperscript{314} It has even upheld a regulation which prohibited the sale of private property entirely.\textsuperscript{315} The Court has also upheld a government authorized physical invasion of private property.\textsuperscript{316} In \textit{Loretto}, moreover, the dissent noted that many rental property regulations which required the installation of such facilities as mailboxes and smoke detectors often interfered with the landlord's ability to use, occupy and control the space so occupied.\textsuperscript{317} Yet those regulations had been upheld as constitutionally valid despite the

fact that they required sometimes larger portions of common space, and were just as permanent as the cable television installation authorized by section 828.  

It is conceivable that the space occupied by the mailboxes could be more useful to the landlord than admittedly otherwise useless space on his roof occupied by cables.  

The mailboxes, furthermore, are as temporary as the cables. Only as long as the owner uses his or her property as rental property is he required to maintain mailboxes and, under section 828, cable television equipment.  

Finally, unlike section 828, other rental property regulations require a landlord to make the installations at his own expense.  

Under section 828, however, the landlord not only controlled the installation of cable facilities through the imposition of reasonable conditions, but also paid nothing for the service. The cable television company was required to pay the costs of installation, maintenance and removal, while indemnifying the landlord for any damages caused by the equipment.  

Thus, it is clear that section 828 was similar to other rental property regulations in many respects, and even more protective of the landlord's interests in others.

The Loretto Court determined, however, that the interference with property rights occasioned by section 828 required a per se rule to protect those rights.  

Yet use regulations and rental property regulations were as capable of adversely affecting those rights as section 828. Prior to Loretto the Court never invoked a per se rule to protect property rights from their interference. Indeed, as the dissent asserted, per se rules were avoided precisely because the extent to which property interests could be injured depended so little on whether a physical touching occurred.  

Thus, the Court's contention that section 828 was justly invalidated under the per se rule because it interfered with property rights is "logically untenable."  

The qualifying distinction, according to the Loretto Court, between section 828 and other regulations, especially rental property regulations, was that section 828 authorized a third party to make the permanent physical occupation.  

While other regulations required the installation of facilities, they did not require the owner to sacrifice his dominion and control over that space to a stranger.  

In the Court's view, the intrusion of a stranger was qualitatively more severe than that caused by any other regulation.  

The Court never demonstrated, however, how the intrusion by a third party was qualitatively  

318 Id.

New York landlords are required by law to provide and pay for mail boxes that occupy more than five times the volume that Teleprompter's cable occupies on appellant's building . . . . If the state constitutionally can insist that appellant make this sacrifice so that her tenants may receive mail, it is hard to understand why the state may not require her to surrender less space, filled at another's expense, so that those same tenants can receive television signals.

more severe than other rental regulations. Just as a landlord was unable to use, occupy or exploit the space occupied by mailboxes and fire escapes, Loretto admitted she could not use, occupy or exploit the space occupied by Teleprompter's cables. Under section 828, moreover, the landlord did have control over his property since Teleprompter was subject to all reasonable conditions that a landlord might impose on the installation of the equipment. Thus, if anything, section 828 provided greater protection of landlords' rights than other rental regulation. Lastly, if the landlord decided to sell his apartment building, the cable service would probably enhance the building's market value rather than interfere with the traditional property right of disposition.

The dissent's characterization of section 828 as a rental property regulation, moreover, underscores the ambiguity of the per se rule. In Loretto, for example, it is arguable that the presence of the cables on Loretto's building was temporary rather than permanent. The dissent characterized section 828 simply as a condition of rental property use that was imposed, not forever, but only for as long as the subject property was used as rental property. The dissent asserted that Loretto could have ended the "permanent" occupation by Teleprompter's equipment by converting her apartment building into a warehouse. Since section 828 applied to rental property only, Loretto could then force Teleprompter to remove its equipment and thereby convert its permanent occupation into a temporary invasion. Thus, the per se rule is ambiguous because of the potential difficulty in distinguishing permanent occupations from temporary invasions. Such ambiguity may encourage property owners to mold their facts to fit the set formula of the per se rule and engage the Court in endless debates in semantics. Such ambiguity and inability to identify all regulations which constitute takings may undercut carefully planned legislation in the public interest more than it will afford greater protection for traditional property rights.

The balancing test, on the other hand, allows the Court to protect traditional property rights without introducing rigidity. Instead of focusing on whether or not the invasion is permanent or temporary, the Court focuses on the extent and impact of the invasion. Moreover, under the balancing test, the Court has expressly held that if the subject regulation can be characterized as a physical invasion it is more likely, but not necessary, that a taking will be found. This flexibility and balanced approach is more in line with the common recognition that property rights may be interfered with to a certain extent to insure the public welfare. Accordingly, the question should not be whether property rights have been impaired, but to what extent. For instance, the New York Court of

Appeals applied the balancing test in *Loretto*. It found that section 828 was a well planned legislative program to balance private interests while promoting the public interest in the increased communication and education available through cable television. The lower court found, moreover, that section 828's interference with the plaintiff's property rights was minimal due to the insignificant amount of space occupied by the equipment. Accordingly, the lower court refused to find the physical invasion authorized by section 828 determinative of a taking.

The balancing process used by the Supreme Court prior to *Loretto*, and by the New York Court of Appeals in *Loretto*, provides sufficient protection for the property rights with which the *Loretto* Court was so concerned. A permanent physical invasion is certainly a factor of major significance, and can be given great weight under the balancing test. It does not necessarily follow, however, that it should be a conclusive factor, since a permanent physical occupation may in some cases cause less interference with property rights than that caused by non-physical or temporary invasions. Moreover, the balancing test gives the Court the flexibility to uphold regulations which cause permanent physical occupations, yet which serve such an important public interest as to outweigh the interference with the owner's property rights. An example of regulations which arguably cause permanent physical occupations of private land for public use, but which have been upheld as serving an important public interest, are subdivision property regulations. The impact of the *Loretto* case, specifically, its effect on the validity of subdivision exactions, must be considered.

C. The Implications of *Loretto* for Subdivision Exactions

Some subdivision development regulations, known as subdivision exactions, require a subdivision developer to denote specified portions of his land for such public uses as sidewalks, roads, sewers, parks and even schools. The donation is generally a prerequisite to the approval of the developer's subdivision plan, without which he cannot legally subdivide. An exaction is not just a regulation requiring the subdivider to use his property as a sidewalk, road, or park. Rather, an exaction requires a permanent conveyance of the developer's title to the designated land to the township or municipality

in which the development is located. By virtue of the exaction, the developer loses dominion, control and possession of the designated property. Land that otherwise would have been available to him for development and sale becomes permanently occupied by such public facilities as sewers, roads, parks and schools. In return for this permanent physical occupation by the public, the subdivider receives no compensation. If he refuses to make the donation, with its concomitant loss, however, his subdivision plans will not be approved and any subdivision development activity would be illegal.

Subdivision exactions are not unlike rental property regulations such as the regulation challenged in Loretto. Both the subdivider and a New York owner of rental property must generally comply with all applicable exactions or regulations in order legally to use their respective property as either a subdivision development or an apartment building. A subdivider, for instance, is required to allow a permanent physical occupation of his property by such public facilities as sidewalks, roads and parks. Similarly, under section 828 of the New York Executive Laws, a New York apartment building owner was required to allow the permanent physical occupation of his property by cable television facilities in the interest of better public communication and education.

Loretto made it clear, however, that rental property regulations which authorized a permanent physical occupation of property were invalid as unconstitutional takings. Subdivision exactions have been similarly challenged as unconstitutional takings of property. Yet the lower courts have almost uniformly upheld them even though they require a permanent physical occupation of property of a far greater magnitude than that required in Loretto. Only a very few lower courts have invalidated subdivision exactions. In
Berg Development Co. v. City of Missouri City, for example, a Texas court invalidated a park dedication requirement. The Texas court held that such exactions were appropriations of realty without compensation and not merely regulations of property use. It asserted, moreover, that to allow exactions to encroach on private property rights under the guise of protecting the public's welfare, was to make a mockery of the Constitution.

The majority of the lower courts, however, have upheld exactions, characterizing them either as voluntary donations, valid conditions of subdivision approval or valid police power regulations to protect the public health, safety, and welfare. Under the first of these theories, some courts have suggested that since the developer is not being forced to subdivide his land, any donation of land he makes for a public purpose is voluntary. Under this theory, because the subdivider's decision to subdivide is voluntary, any permanent physical occupation that occurs as a result of subdivision, is also voluntary and not a taking. If the developer wants to avoid the donation, he may simply refrain from subdividing and hold or sell his property as one large undivided lot.

Other courts have reasoned that the ability to subdivide is a privilege conferred by the government and which the government may condition as it wishes. This theory is similar to the voluntary theory. According to the courts, the government is not forcing the developer to dedicate his land. On the contrary, it is merely imposing conditions on its approval of the proposed subdivision. As the courts note, the act of subdivision allows a

developer to sell his property in a more profitable manner. For this privilege, it is not unreasonable, in the view of some courts, to require a subdivider to comply with certain conditions such as the permanent donation of land for public use. As long as the exactions or conditions are not arbitrary and are necessitated by the developer’s activity, many lower courts have upheld them against takings challenges.

These two theories, the voluntary theory and the condition-privilege theory, are still used by some courts. A third theory, however, the police power theory, is the most widely used basis for upholding subdivision exactions. According to this theory, a subdivision attracts to an area new people who would not otherwise be a local concern. The influx of new people requires the installation of new services such as sewers, roads, sidewalks and schools. A subdivision without these facilities, without proper sanitation, access for emergency vehicles, and recreation areas, endangers the public health, safety and welfare. Since it is decidedly within the states’ police power to protect the public, the states may, in the courts’ view, exact land from developers to insure that the development will not so endanger the public. If the exactions are within the enabling legislation, if they are not arbitrary and are reasonably necessary to promote the public welfare, and if it is the developer’s subdivision activity which necessitates the exactions, many courts will uphold the exactions as valid police power regulations. It is implicit in the courts’ reasoning that the public interest in a clear, safe community outweighs any loss imposed on the developers by the exactions.

See, e.g., Associated Home Builders of Greater East Bay, Inc. v. City of Walnut Creek, 4 Cal. 3d 633, 644-65, 94 Cal. Rptr. 630, 640-43, 484 P.2d 606, 615 (1971); Jordan v. Village of Menomonee Falls, 28 Wis. 2d 608, 619-20, 137 N.W.2d 442, 448 (1965).

See, e.g., Mansfield & Swett, Inc. v. Town of West Orange, 120 N.J. 145, 150, 198 A. 225, 229 (1938) (upholding a board’s authority to impose reasonable restrictions on subdivision developments). There the court stated:

The state possesses the inherent authority — it antedates the Constitution — to
Regardless of which theory is used, the lower courts have been circumspect in their treatment of subdivision exactions. Instead of detailing exactly why the exactions do not constitute takings, the decisions tend to uphold them in a conclusory fashion, simply calling them voluntary donations, valid conditions, or permissible police power regulations.387 There are indications, however, that the courts have actually engaged in a type of balancing process in upholding subdivision exactions.388 In the process, the courts seem to be weighing the public interest in the orderly growth of their community and the subdivider's ability to reap a profit against the invasion of the subdivider's property rights occasioned by the required donations of land.389 The courts have characterized the subdivider as a businessman. As such, he is not protecting his hearth and home from invasion but rather exploiting his property as a profit-making business.390 Consequently, according to this rationale, although it would be constitutionally impermissible to require a residential lot owner to donate part of his property for a municipal park, it is reasonable and permissible to require the developer to make the same donation.391 As long as he is allowed to make a reasonable profit, it is irrelevant that some of his land must be donated for public facilities.

...
Presumably, a subdivision exaction would only be struck down if it was so excessive as to substantially eliminate the developer’s profit, or if the exaction was not reasonably related to the public welfare or the developer’s activity. In Ayers v. City Council of Los Angeles, for example, the Supreme Court of California upheld an exaction which required a developer to dedicate a ten-foot strip of land for widening a boulevard which abutted his subdivision and an additional ten-foot strip for planting of trees and shrubbery. The court rejected the developer’s argument that the exaction constituted an uncompensated taking, finding instead, that the required widening was reasonably related to the potential traffic needs generated by the subdivision, and that the required design imposed no undue burden upon the subdivider. Apparently, the court balanced the developer’s profit potential and the public interest in orderly traffic patterns against the exaction’s interference with the developer’s property rights to find that the exactions were reasonable conditions to protect the public and not unconstitutional takings.

Many subsequent cases followed Ayers’ lead, reasoning that a subdivider realizes a profit from governmental approval of a subdivision since his land is rendered more valuable by virtue of subdivision. In return for this benefit, it has been held that the city may require him to dedicate a portion of his land for specified purposes whenever the influx of new residents caused by the subdivision increases the demand for those services. Thus, although not expressly stated in any subdivision exaction case, it does appear that the courts are actually balancing the subdivider’s profit and the public interest against the exaction’s interference with his property rights. The characterization of the developer as a profit-making businessman would explain why subdivision exactions do not constitute takings when applied to developers, where they would if applied to single family lot owners.

One important factor in this balancing process, however, is the permanent taking over of part of the subdivider’s property without compensation. The strict enforcement of Loretto’s per se rule in subdivision exaction cases would prohibit the courts from...
engaging in any balancing process. Loretto expressly held that any permanent physical occupation of property was a taking regardless of the public interest involved or type of property occupied. Consequently, all subdivision exactions would be necessarily invalidated as takings. The courts would no longer be able to distinguish between subdivision development property and single tract residential lots. A determination under Loretto's per se rule that subdivision exactions constituted unconstitutional takings would have a serious impact on a community's continued ability to control subdivision development. Exactions are presently used to insure that land for necessary facilities such as sewers, sidewalks and even parks will be available. It is doubtful in this era of strained budgets and tight finance that local governments could afford to pay for the land presently acquired via exactions. Nor is it unreasonable to speculate that if the Court was willing to invalidate a rental property regulation on the basis that it authorized a permanent physical occupation of private property, it would also be willing to invalidate a subdivision property regulation on the same basis.

Instead of establishing a per se rule with the potential power to invalidate subdivision exactions, the Court in Loretto should have borrowed the lower courts' rationale for upholding subdivision exactions. Just as the subdivider is faced with a choice between not subdividing or voluntarily complying with all applicable exactions regardless of whether they require a permanent physical donation of land, the apartment building owner should be faced with a choice between not using his property as an apartment building or complying with all applicable rental property regulations. Like the subdivider, the apartment building owner is engaged in a profit making enterprise. He is not defending hearth and home against a governmental intrusion, but simply attempting to maximize the profit potential of his property. As applied to him, section 828 is merely another regulation governing his business. Subdivision exactions have been upheld as valid business regulations designed to protect the public regardless of their required permanent physical donation of land. Section 828 and similar rental property regulations could also be upheld on that basis. Logic requires that the alternative is to invalidate both subdivision exactions and rental property regulations which require any permanent physical occupation of private property by the public. Precedent demonstrates, however, that the lower courts have been unwilling to invalidate useful exactions if they are related to a need created by the subdivider and necessary to promote the public welfare.

In Loretto, the New York Court of Appeals found that section 828 was both reasonable and necessary to promote the public welfare. The invasion authorized by the statute was minimal in nature and did not interfere with any reasonable expectation that the space occupied by the cable would be income productive. In addition, the statute even provided for the protection of the landlord's interests by requiring the cable

television company to pay for the installation, maintenance and removal of the equipment, and to indemnify the landlord for any damages caused by the equipment. Moreover, the New York Legislature had determined that section 828 insured that landlords would not selfishly impede the spread of an important means of public communication and education. The legislators had discovered that landlords often charged tenants who subscribed to the service a higher monthly rent or charged the cable television company a higher fee for the use of the landlord's property. The legislature had feared that these fees would inhibit the development of cable television, a service which, in their estimation, benefitted the general welfare. Given those factors, it would have been reasonable for the Supreme Court to conclude that section 828 was a valid and carefully planned regulation designed to protect the public interest in the spread of cable television, from price-gouging landlords, while at the same time, limiting as much as possible the interference with the landlord's property rights. The lower courts have already determined that subdivision exactions similarly protect communities from deficient subdivision developments, through a limited and valid interference with the developer's property rights and profit potential. Yet subdivision exactions, like section 828, require a permanent physical occupation of property. Either the per se rule in Loretto may mandate the invalidation of subdivision exaction, or in retrospect, the Loretto Court should have considered the rationale supporting exactions to uphold section 828 as a valid police power measure to protect the public welfare.

CONCLUSION

Loretto's per se rule that all permanent physical occupations of private property authorized by government are takings, contradicts the recent trend toward the development of a multifactor balancing test suitable for all takings disputes. The per se rule lacks the flexibility inherent in the balancing test and essential for the resolution of modern disputes arising out of the complex urban and technological environment of the twentieth century. In a changing world, old concepts of private property and public interest should also change. The Loretto Court has attempted to halt that necessary evolution with its old fashioned, overly simplistic and rigid rule. Such a rule not only seems unsuited to the modern age, but may also have a far-reaching and disastrous impact on important regulations such as subdivision exactions.
