Ensuring equal educational opportunity for all children has long been a cherished American ideal. Since the early days of our republic, the people of the United States have recognized that free public education is one of the most important ways in which our country fulfills its promise of equal opportunity for all citizens. Public schools have traditionally served as a means by which the immigrant and the disadvantaged are able to enter the mainstream of our society. Public schools have provided both a way to ensure equal opportunity for the individual, as well as a means to strengthen and unify our country. Because of the importance of this dual role of education in our democratic society, a key goal of public education in the United States has been to provide quality schooling for all children.

Although few Americans would quarrel with the ideal of equal educational opportunity, not all would define the concept in the same way. The initial interpretation of this evolving concept identified equal educational opportunity with overcoming inequalities in schooling stemming from racial discrimination. Proponents of this interpretation, which dominated the first half of this century, focused initially on the provision of equal services and facilities to all children regardless of race. By 1950, this concept

8 Id.
of equal educational opportunity also emphasized the need for schools to be equal in terms of intangible factors such as morale and prestige.\(^9\)

During the 1960s, a second interpretation of the concept of equality of educational opportunity emerged.\(^10\) This interpretation focused on the output of education, or on equalizing the educational achievement of various societal groups.\(^11\) A third interpretation of the concept of equal educational opportunity emphasizes the equalization of the financial input into a child's education.\(^12\) The focus under this definition is on equalizing such factors as teachers' salaries, teacher-pupil ratios, learning resources, textbooks and course offerings among the schools.\(^13\) This concept emphasizes equal access to equally funded education, and reflects the belief that factors such as class size and course offerings affect a child's opportunity and ability to learn.\(^14\)

For those who believe that the amount of money expended on a child's education can affect educational achievement, one focus of the movement to achieve equal educational opportunity has been to seek court-ordered equalization of funding so that all public school districts within a state receive about the same amount of money per pupil per year (per pupil expenditures).\(^15\) This strategy is, in essence, a constitutional challenge to the state's decision to fund public schools partially through local property tax revenue raised by each school district, though the state recognizes that the amount of money school districts can raise varies with the value of the property within their district.\(^16\) School reform plaintiffs contend that the use of this fi-

\(^16\) See School Finance Reform, supra note 1, at 87. The financing plans that are being constitutionally challenged in these school finance reform cases are the result of a series of decisions made by the state. Under the United States Constitution, states are not required to provide free public education, but all fifty states have chosen to do so through statutory or constitutional provisions. Racial Isolation, supra note 2, at 260. In organizing their statewide
nancing system causes significant, and unconstitutional, differences

systems of public schools, the states have traditionally allowed each city or town to establish its own school district, and to operate it as a relatively autonomous unit. School Finance Reform, supra note 1, at 87. Instead of funding these locally-organized school districts totally through state funds, states have chosen to fund these school districts through a combination funding plan consisting of state aid derived from statewide taxes, and of tax revenue derived by school districts from local property taxes. Barro, Alternative Post-Serrano Systems and Their Expenditure Implications (1974), [hereinafter Implications] in SCHOOL FINANCE IN TRANSITION, supra note 1, at 35. The state funding generally provides only ten to fifty percent of the necessary operating budget of a school district. See id.

The remainder of the funds a school district needs to provide for its state-mandated compulsory education is generally derived from local property taxes. See H. Levin, Effects of Expenditure Increases on Educational Resource Allocation and Effectiveness (1974) [hereinafter Effects of Expenditures], in SCHOOL FINANCE IN TRANSITION, supra note 1, at 177. Property taxes are the mainstay of most school districts' local revenue, though some states permit their school districts to levy nonproperty taxes as well. R. Hartman & R. Reischauer, The Effect of Reform in School Finance on the Level and Distribution of Tax Burden (1974), in SCHOOL FINANCE IN TRANSITION, supra note 1, at 108, 109. Even in these states, however, property taxes are still the major source for local funds. Id. at 109, 113, 119.

In contrast to the relatively equal funding that school districts receive from the state, the amount of money that school districts receive from local property taxes varies considerably. See supra note 1, at 177. This difference in local tax revenues typically occurs because there is a significant variation among school districts in terms of the per capita value of the property located within the districts' boundaries. See Final Report to the California Senate Select Committee on School District Finance 9 (1972) [hereinafter Final Report] as quoted in School Finance Reform, supra note 1, at 87. Because property taxes are calculated on the basis of the value of a piece of property, school districts with high property values ("property-rich school districts") can collect significantly more money to fund their schools. Id.

Property-rich school districts can often collect these larger sums of money at a lower tax rate than can school districts with low property values ("property-poor school districts"). Id. If a school district levies a tax of $2.00 on each $1,000 of property valuation, for example, a piece of property worth $10,000 will yield $20.00 in property tax revenues. See generally Massachusetts, Department of Education, Bureau of Data Collection and Processing, "School District Comparisons of Boston, Braintree, Lawrence" (Fiscal Year 1988–89). If a piece of property is worth $2,000, the same tax rate will yield only $4.00. See id. Thus, school districts that have a high average per capita property valuation have a greater ability to raise funds for local schools than do school districts where the average per capita valuation of property is much lower. See id.

The differential ability of school districts to raise local funds affects the amount of money a school district is able to spend per year per pupil on education. See id. The differences in the amount of money spent per pupil among school districts in turn has a measurable impact on class size, faculty, resources and curriculum. See RACIAL ISOLATION, supra note 2, at 30. The effect of this differential funding on the quality of education led commentators to observe that when states choose to use a combination system of state aid and local property taxes to fund public schools, and do not equalize the inequities that the use of property taxes cause, the quality of a child's education becomes a function of the wealth of his or her parents, neighbors and school district. See School Finance Reform, supra note 1, at 85.

The Final Report points out how states have created the school finance systems characterized by the inequities condemned in school finance cases:

(1) The state permits local school districts to exist, (2) the state gives each district the power to raise money through a local property tax on property physically located within the district's border, (3) the state permits each district to keep
in the amount of money spent per child on education between property-rich and property-poor school districts.\textsuperscript{17}

In seeking court-ordered school finance reform, the plaintiffs' key premise in school finance cases is that disparity in school financing denies children in property-poor school districts educational opportunities substantially equal to those enjoyed by other children.\textsuperscript{18} Plaintiffs have thus argued that a funding system that produces significant financial disparities in per pupil expenditures among a state's school districts should be declared unconstitutional because it violates the equal protection clause of the fourteenth amendment by discriminating against children from poor areas of the state.\textsuperscript{19} Plaintiffs have also pursued the equal protection argument at the state level, alleging that this type of funding disparity violates their respective state equal protection clauses as well.\textsuperscript{20}

A third basis on which plaintiffs have argued that this type of unequal funding system is unconstitutional relies on the education provision in the state's constitution that authorizes the legislature to establish a state public school system.\textsuperscript{21} The actual wording of these establishment provisions varies from state to state.\textsuperscript{22} Generally, however, these establishment provisions specify that the state maintain a school system with certain characteristics such as efficiency, thoroughness or uniformity.\textsuperscript{23} Plaintiffs in school finance cases have thus charged that a school finance system that results in significant funding disparities among school districts is not "efficient," "uniform" or "thorough," and is thus unconstitutional.\textsuperscript{24}

\begin{itemize}
\item the money it raises, knowing that from district to district the ability to raise money for schools varies widely because of the dramatically uneven distribution of property wealth about the state, and (4) the state fails to equalize these wealth differences through "state aid"... Since 1968, when the first school finance reform case was decided, plaintiffs from twenty-eight states have argued that their respective state plans for financing public schools were unconstitutional based on equal protection or state education provision grounds. In Georgia, Illinois, Maryland, Michigan, Montana, New

---

25 These states, and their respective cases, include:

Jersey, Texas, Washington, Wisconsin and Wyoming, courts have considered issues related to the constitutionality of state school funding plans at least twice.\(^{26}\) Until 1989, however, the school finance reform movement was only marginally successful, and interest in court-ordered school finance reform appeared to be decreasing.\(^{27}\)

Then, in 1989, within months of each other, courts in Kentucky, Montana and Texas declared their respective state school financing plans unconstitutional on the grounds that significant disparities in school district funding violated their state education provisions.\(^{28}\) Montana also declared its state system of financing schools unconstitutional because the state had forced school districts to rely on permissive tax levies that voters could reject.\(^{29}\)

Prior to 1989, public school financing systems had been declared unconstitutional in only ten states: \textit{Dupree}, 279 Ark. at 345, 651 S.W.2d at 93; \textit{Serrano}, 5 Cal. 3d at 618–19, 487 P.2d at 1266, 96 Cal. Rptr. at 625; \textit{Horton}, 172 Conn. at 648–49, 376 A.2d at 374; \textit{Caldwell}, Civil No. 50616 (Kan. Dist. Ct. Aug. 30, 1972); \textit{Rose}, 790 S.W.2d at 215; \textit{Van Dusartz}, 334 F. Supp. at 877; \textit{Helena Elementary School Dist. No. 1}, 236 Mont. at 47, 769 P.2d at 691; \textit{Robinson}, 62 N.J. at 480, 303 A.2d at 276; \textit{Edgewood Indep. School Dist.}, 777 S.W.2d at 396; \textit{Washakie County School Dist. No. 1}, 606 P.2d at 322, cert. denied sub nom. Hot Springs County School Dist. No. 1 v. Washakie County School Dist. No. 1, 449 U.S. 824 (1980). Only six of these decisions, however, came after the 1973 \textit{Rodriguez} decision. The last decision that held a state financing system unconstitutional occurred in 1983. \textit{See Dupree}, 279 Ark. at 345, 651 S.W.2d at 93. There were no school reform cases decided between 1984 and 1987, and just one case was decided in 1987 and 1988. \textit{See supra note 25.}

In addition to these three funding disparity cases, 1989 also saw the revival of an issue first raised in the late 1960s: whether equal educational opportunity requires not just equal access to equally funded programs, but equal access to programs that are equally effective.  

The Wisconsin Supreme Court rejected this concept, but the New Jersey Supreme Court held in a 1990 case that the state must expend more funds on the education of disadvantaged children from court-identified poor urban school districts because of their special needs. Moreover, in light of the municipal overburden faced by the cities, the New Jersey Supreme Court ruled that the state could no longer place the financial responsibility for educating disadvantaged children on these urban school districts, but must instead guarantee adequate funds to meet the educational needs of these children.

With the addition of the 1989–1990 court decisions, the school finance reform movement appears to have entered a new phase. Commentators have observed a revived interest in the school finance reform movement as a means of equalizing educational opportunity through equalizing access to equally funded programs. In addition, the 1989–1990 decisions have also focused attention on the constitutionality of state school funding systems that require local voter approval of school taxes, or depend on the availability of local resources, to fund a basic education. Moreover, the New Jersey decision has added a new branch to the school finance movement that focuses not on equal funding, but on the need to provide more funding for disadvantaged children in order to equalize the effectiveness of a public school education.

Massachusetts is one of twenty-two states in which courts have yet to rule on the constitutionality of the state's plan for financing schools. Factually, however, the current school financing system in

37 See supra note 25.
Massachusetts bears a close resemblance to the Kentucky, Montana and Texas systems that have recently been declared unconstitutional. The Massachusetts system of financing schools is characterized by unequal funding, local voter control over funds needed to support the schools and lower levels of funding in many school districts that have large populations of disadvantaged children.\(^{38}\) The history of the school finance reform movement, however, indicates that the ultimate success of a court case challenging the Massachusetts system of financing schools will depend not only on the facts related to unequal funding, but also on the legal arguments that potential plaintiffs choose to make. This note, then, assesses both the factual and legal bases for mounting a successful challenge to the current inequitable system of financing schools in Massachusetts.

In making this assessment, this note first reviews, in Section I, the history of the school finance reform movement and the evolution of the concept of equal educational opportunity under the fourteenth amendment.\(^{39}\) Sections II,\(^{40}\) III\(^{41}\) and IV\(^{42}\) examine the three waves of school finance reform cases that federal and state courts have considered between 1968 and 1990. Section V focuses on the statistical and constitutional bases for challenging the legality of the current system of financing public education in Massachusetts.\(^{43}\) Finally, Section VI assesses the likelihood that a successful challenge to the current inequitable system of funding Massachusetts public schools can be mounted based either on the federal or state equal protection clauses or on the Massachusetts constitutional provision on education.\(^{44}\) The note concludes that a successful constitutional challenge to the current system of funding schools in Massachusetts can likely be mounted based either on the state's education provision or on the state's equal protection clause.\(^{45}\)

I. The Evolution of the Concept of "Equal Educational Opportunity" Under the Fourteenth Amendment

A. Plessy v. Ferguson and Early Fourteenth Amendment Decisions of the United States Supreme Court

In the area of education, the legal definition of equal educational opportunity has been defined and has evolved primarily through federal cases interpreting the fourteenth amendment. The fourteenth amendment of the United States Constitution provides that it is unlawful for a state to make or enforce any law that will deny any person within its jurisdiction the equal protection of the law. The primary purpose of the amendment, which Congress passed after the Civil War, was to ensure that states could not make laws that would abridge the rights of, or discriminate against, the newly-freed slaves. It was unclear, however, what constituted "discrimination," and what types of laws the equal protection clause might affect. These were issues which the Supreme Court would be called upon to interpret on numerous occasions.

The first decision related to the fourteenth amendment that had a direct impact on the legal definition of equal educational opportunity was Plessy v. Ferguson, which the Supreme Court handed down in 1896. In Plessy, the Supreme Court examined the constitutionality of a Louisiana law requiring that all railway companies operating in Louisiana provide equal but separate coaches for "white and colored races." The Court held that this law requiring separate accommodations on the basis of race was not unconstitutional in part because it believed the fourteenth amendment applied to the political, but not the social, arena. Separate but equal accommodations, the Supreme Court therefore concluded, did not deprive the "colored man" of his property without the due process of law, nor deny him the equal protection of the law within the meaning of the fourteenth amendment.

52 Id. at 544.
53 Id. at 542.
The *Plessy* decision was applied not only to public accommodations, but to public schools as well. Until *Plessy* was overturned in 1954, the "separate but equal" doctrine defined equality of educational opportunity in public education. Thus, during this sixty-year period, the movement to achieve equality of educational opportunity for all children focused on the elimination of easily identifiable inequalities that existed between black and white schools. Court suits were primarily designed to force school districts to equalize black schools in terms of tangible factors such as school facilities, teacher-pupil ratios and course offerings.

In addition to court suits during this period that were designed to enforce the "separate but equal" doctrine, efforts to overturn the *Plessy* decision began. Led by the National Association for the Advancement of Colored People ("NAACP"), the legal battle to overturn *Plessy* and force the desegregation of public schools began in the late 1930s, and spanned two decades. The initial court cases in conjunction with this effort focused on the desegregation of public graduate and professional schools because the NAACP felt that states could not provide separate but equal schools for blacks at this level. In addition, Associate Justice Thurgood Marshall, who in the 1950s spearheaded the NAACP's cases, recalled that the higher education strategy was also chosen because the NAACP felt...
southerners would be less emotional about the integration of colleges and universities.\textsuperscript{61}

The NAACP's strategy to begin its desegregation campaign with professional and graduate schools proved to be successful, and the first decision requiring the admission of a black student to a previously all-white state-supported law school came in 1938.\textsuperscript{62} In a decision that it would reaffirm in principle ten years later,\textsuperscript{63} the Supreme Court in \textit{Missouri ex rel. Gaines v. Canada} ruled that Missouri had not provided black students with equal protection of the law by paying their tuition to out-of-state law schools and denying black students admission to state-supported law schools in Missouri.\textsuperscript{64} Emphasizing equality in terms of tangible factors related to schooling, the Court held that black students were entitled to substantially equal facilities \textit{within} the state and, in the absence of these facilities, that they must be admitted to white schools.\textsuperscript{65}

A decade later, the NAACP presented the Supreme Court with two higher education cases that focused attention not only on the equalization of tangible factors related to schooling, but on the necessity to equalize intangible factors as well.\textsuperscript{66} Thus in \textit{Sweatt v. Painter}, decided in 1950, the Supreme Court considered whether a black law school which had been quickly established by the state of Texas provided an equal education.\textsuperscript{67} The Supreme Court concluded that it did not, finding that the Texas State University for Negroes was not only inferior to the University of Texas Law School in terms of tangible factors such as library holdings, but also in terms of intangible qualities that "made for greatness" in a law

\textsuperscript{61} \textit{Id.} As Marshall stated:

Those racial supremacy boys somehow think that little kids of six or seven are going to get funny ideas about sex and marriage just from going to school together, but for some equally funny reason youngsters in law school aren't supposed to feel that way. We didn't get it, but we decided if that was what the South believed, then the best thing for the movement was to go along.

\textit{Id.}

\textsuperscript{63} The Supreme Court reaffirmed the principle in the \textit{Gaines} decision in \textit{Sipuel v. University of Oklahoma}, 332 U.S. 631, 632–33 (1948). In \textit{Sipuel}, the Court held that a black student denied admission solely because of her race had to be admitted to that state-supported institution. \textit{Id.} at 632–33.

\textsuperscript{64} 305 U.S. 337, 349–50 (1938).

\textit{Id.}

school, such as faculty reputation, community standing, traditions and prestige. The Supreme Court held in Sweatt that the state of Texas could require blacks to attend a segregated law school only if that school could offer black students a legal education equivalent to that offered students of other races in terms of tangible and intangible factors.

The Supreme Court further emphasized the importance of intangible factors in judging equality of educational opportunity in McLaurin v. Oklahoma State Regents for Higher Education, a decision handed down in 1950 on the same day as Sweatt. In McLaurin, the Supreme Court was faced with the necessity of determining if segregating an individual within a classroom, in and of itself, affected the equality of the person's education. The Supreme Court answered in the affirmative, ruling in McLaurin that a black student admitted to a state university to pursue a program not offered at the state's black graduate school could not be required to sit in separate sections of the classroom, library and cafeteria. Such restrictions were unconstitutional, the Court observed, because they impaired the black student's ability to learn his chosen profession by preventing him from engaging in discussions with his peers and professors. With McLaurin, the attention of the Supreme Court was thus firmly fixed on the intangible psychological effects of segregation on blacks. After McLaurin, the stage was set for the NAACP to present the Supreme Court with a case that would require the court to determine if segregated schools, by their very nature, deprived black children of the equal protection of the law even though their facilities might be equal.

B. Equal Educational Opportunity Through Integration: The Promise of Brown v. Board of Education

In 1952, the NAACP was able to present the Supreme Court with not one but four public school cases addressing the doctrine

---

68 Id. at 634–35.
69 Id.
71 Id. at 640–42.
72 Id. at 641–42.
73 Id. at 642.
75 See id. In Sweatt, plaintiffs had argued for a re-examination of Plessy v. Ferguson, but the Supreme Court chose to decide the case on narrower grounds. 339 U.S. at 695–96.
of "separate but equal." Three of these cases had resulted in lower court rulings that the separate public school facilities provided to black children were "equal," and thus constitutional. Consolidated under the federal district court case from Kansas, Brown v. Board of Education, each of the four cases varied in terms of facts, but all involved black children seeking admission to schools attended solely by white children under laws requiring or permitting segregation according to race. The Supreme Court heard arguments on Brown in the 1952 term, and in 1954 held that segregated schools were inherently unequal.

The Supreme Court's decision in Brown was based in part on studies that demonstrated that segregated schools had a negative psychological effect on black children. The Supreme Court noted that segregation had a psychologically detrimental effect on black students because the policy of separating races was usually interpreted as denoting the inferiority of the black race. This sense of inferiority that blacks felt because of segregation affected the motivation of black children to learn, and deprived them of some of the benefits they would receive in a racially integrated school system. Given this negative effect of segregation on the black child, the Supreme Court in Brown held that in the field of public education, the doctrine of "separate but equal" had no place.

In reaching its decision in Brown, the Supreme Court determined that it could only judge if segregated public schools deprived black students of the equal protection of the law by considering public education "in light of its full development and its present place in American life." In what courts now consider to be the classic statement on the role of education in our society, the Supreme Court in Brown wrote:

Today, education is perhaps the most important function of state and local governments . . . . It is required in the

performance of our most basic public responsibilities... It is the very foundation of good citizenship. Today it is a principal instrument in awakening the child to cultural values, in preparing him for later professional training, and in helping him to adjust normally to his environment. In these days, it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity of an education.\textsuperscript{85}

Such an opportunity, the Supreme Court concluded, "where the state has undertaken to provide it, is a right which must be made available to all on equal terms."\textsuperscript{86} Though it did not define the concept of "equal terms," in holding that segregated schools were inherently unequal and unconstitutional, the Supreme Court's decision in \textit{Brown} seemed to many national leaders to offer great promise to those who wished to make equal educational opportunity a reality for all children.\textsuperscript{87}

\section*{C. Still Segregated, Still Unequal: Public Schooling After Brown}

Despite the promise of \textit{Brown}, by the mid-1960s government studies began to indicate that \textit{Brown} had had little impact either on providing equal educational opportunity for all children, or on eliminating segregated schooling.\textsuperscript{88} This continued segregation of American schools concerned national leaders in the mid-1960s, both because of the negative effects of segregation on black children,\textsuperscript{89} and because it was difficult to see how such a segregated school system could lead to an integrated society.\textsuperscript{90} In addition, national leaders were also concerned about continued segregation because the segregated schools attended by inner-city minority youth were inferior to those attended by white suburban children.\textsuperscript{91} The United States Commission on Civil Rights ("Civil Rights Commission")

placed much of the responsibility for the inferior quality of these urban schools on the state because of the type of school districting plans and funding patterns that states had allowed to develop in metropolitan areas.\textsuperscript{92}

As the Civil Rights Commission detailed in \textit{Racial Isolation in the Schools}, the population in the United States had been gradually shifting to urban areas.\textsuperscript{93} In making the move to the city, blacks had settled primarily in the inner or central city, and as they did so, the white population in urban areas had shifted from the city to the suburbs.\textsuperscript{94} States had allowed suburbs to set up their own school districts financed and operated separately from city schools.\textsuperscript{95} The Civil Rights Commission reported that a single metropolitan area might be served by forty or more school districts; in the Boston metropolitan area alone the Commission reported that there were seventy-five separate school districts.\textsuperscript{96} Each of these school districts in turn was funded separately, through a combination of state aid and local property taxes.\textsuperscript{97} Had cities and suburbs been equally able to raise funds to support their schools, this type of multi-district plan within a metropolitan area would have had little impact on the quality of education provided in city and suburban schools.\textsuperscript{98}

City and suburban school districts, however, were not equal in terms of their ability to raise local funds, their municipal burdens and the state funds they received.\textsuperscript{99} Part of the problem that city school districts faced, according to the Civil Rights Commission, was the competition for funds within the city between the schools and other local services.\textsuperscript{100} The central cities in metropolitan areas spent three times as much on welfare and twice as much on public safety as did the suburbs because they had to provide for more poor people, and continue to provide city services for non-resident suburbanites working in the city.\textsuperscript{101} The city school districts could thus not claim as high a percentage of the city budget as suburban school districts could claim from their suburbs.\textsuperscript{102}

\end{itemize}
City schools also faced the problem of declining city budgets. The suburbanization of affluent families and businesses had caused the city tax base to shrink. Cities were generally able to raise less money through taxes on local property than suburbs because the property within the city typically was worth less per capita than that in the suburbs. Moreover, state funds for education did not close the gap caused by property taxes because states were actually funding suburban districts at a higher level than city districts. In many metropolitan areas, including Boston, the states contributed more money per child in 1966 to suburban school districts than to the city school districts.

The Civil Rights Commission concluded that because of municipal overburden in cities, unequal state aid, and the use of local property taxes to fund schools, property-rich suburbs could buy significantly better schools than could city school districts. The Commission observed that these facts led to a cyclical problem, as the better schools that suburbs could afford encouraged more whites to flee the city. White flight further decreased the city's tax base, resulting in less funds available for city schools. Cities then had to increase their tax rate to raise even the same amount of money, and the increased tax rate encouraged more white flight and renewed the cycle. The end result of this whole process was that thousands of poor and mostly minority children were isolated in what one member of the Civil Rights Commission described as "inadequately staffed and ill-equipped [urban] slum schools." The urban minority poor, Commissioner Freeman observed, seldom had access to the quality of education provided the mostly white children who attended suburban schools on the other side of what he called "The Great Divide."

The Civil Rights Commission made a number of recommendations in its 1966 report designed to improve the quality of urban city schools and decrease segregation in public education. In general it favored massive congressional action rather than court action, because Congress had the ability to appropriate funds to

remedy the myriad of problems that had led to the inferior quality of urban inner-city schools.\textsuperscript{112} In a short but detailed section in the legal appendix of the Commission's report, however, the Commission also discussed the possibility that the substantial fiscal and tangible inequalities that existed between the city and suburban school districts could contravene the fourteenth amendment's equal protection clause.\textsuperscript{113} The Commission observed that with respect to public education the state might be under no obligation to provide it, but that once having made a decision to provide it, the state might be under an obligation under the fourteenth amendment to see that rich and poor children received that education on substantially equal terms.\textsuperscript{114}

By the mid-1960s, then, considerable evidence revealed that the public schools in the United States were neither integrated nor equal.\textsuperscript{115} It was also clear that the Brown decision by itself could neither totally eliminate segregated schooling in the United States nor ensure equal educational opportunity for all.\textsuperscript{116} The Brown decision applied only to intentionally segregated schools, and was ineffective in combating segregated schooling caused by segregated housing patterns and state policies requiring children to attend school in their own neighborhoods.\textsuperscript{117} Moreover, the Court never intended the Brown decision to combat inequities in school financing.\textsuperscript{118} By the mid-1960s most black children were attending neither the integrated schools that Brown seemed to promise in 1954, nor the "separate but equal" schools that Plessy mandated in 1896.\textsuperscript{119}

D. The Supreme Court Broadens the Scope of the Fourteenth Amendment: Harper v. Board of Education Sets the Stage for the Initial Challenge to State School Funding Plans

Although the fourteenth amendment as interpreted by Brown was limited to the prohibition of intentional racial discrimination,
after Brown the Supreme Court made a series of decisions that broadened the applicability of the fourteenth amendment and offered a new avenue for the legal pursuit of equal educational opportunity. Historically, as exemplified in Plessy and Brown, the Supreme Court had interpreted the fourteenth amendment to apply only to laws that had an unequal impact on an identifiable racial group, or on an individual who was a member of the group. If a law classified people on a basis other than the "suspect" category of race or national origin, and was applied differently depending on one's classification, the Court was still likely to uphold the law as long as the classification used was reasonably or rationally related to the legislature's purpose in passing the law.

The requirement that a law be rationally related to a state goal was generally, as commentator Gerald Gunther noted, easily satisfied. Except where race was involved, the Court did not require that the classification used in the law exactly "fit" the purpose of the law. The Court allowed legislators considerable flexibility in framing laws that classified people according to the benefits conferred or the burdens imposed on the people, unless racial discrimination was involved.

Beginning with the Warren Court, however, Gunther noted that the Supreme Court broadened the situations in which a state law might be subject to the "strict scrutiny" of the Court. Instead of being limited to laws involving the "suspect category" of race, under the Warren Court, laws that affected "fundamental rights" were also subject to the Court's "strict scrutiny." This strict scrutiny standard meant that a law affecting the exercise of a fundamental right would only be upheld if the state could show a compelling interest for the law which could not be met in any other way.

The effect of requiring that a law meet the strict scrutiny standard of the Court was considerable. Under this standard, instead
of the Court assuming that a state law was constitutional, and re-
quiring only that it bear a rational relationship to a state interest, the Court required the state to assume the burden of proof and demonstrate that it had a compelling reason to classify people in a way that might interfere with the exercise of a "fundamental right." As Gunther noted, determining that a law required the strict scrutiny of the Court meant that the scrutiny was "strict in theory, and fatal in fact." 130

In including "fundamental rights" under the umbrella of the strict scrutiny standard, the Supreme Court initially interpreted fundamental rights to include only those rights specifically guaranteed in the federal constitution, such as the right of interstate migration. 132 In Harper v. Virginia Board of Elections, however, the Supreme Court in 1966 broadened its definition of a fundamental right, and held that a fundamental right could be implied rather than explicitly stated in the federal Constitution. 133 The Harper case involved a constitutional challenge to a state law that required citizens to pay an annual fee, or poll tax, of $1.50 to vote. 134 The Supreme Court held that this poll tax law was unconstitutional because it could potentially interfere with a person's fundamental right to exercise his or her power to vote. 135

The Harper Court reasoned that the right to vote was a fundamental right because it was "preservative of all other rights" and thus could be considered to be implicitly guaranteed in the Constitution. 136 In addition, the Supreme Court also seemed to imply that a state could not discriminate on the basis of wealth. 137 Thus, when a law like the poll tax was used to condition the receipt of a fundamental right, it appeared to some observers that the law would violate the equal protection clause of the fourteenth amendment not just because it interfered with a fundamental right, but also because it discriminated on the basis of wealth. 138 To some, the Harper decision seemed to indicate that the Supreme Court would consider wealth, like race, to be a "suspect" category, requiring a

law that assigned benefits based on wealth to meet the "strict scrutiny" standard to be upheld.\footnote{139}

After Harper, then, there appeared to be two ways in which a state law could be subject to the strict scrutiny of the Court.\footnote{140} A law could be subject to strict scrutiny because it interfered with a right that was "fundamental," either because the right was explicitly or implicitly guaranteed in the federal Constitution.\footnote{141} A state law could also be subject to strict scrutiny if it classified people on the basis of a suspect category, which might include classifications made on the basis of wealth.\footnote{142} Since the activation of the strict scrutiny of the Court generally proved to be fatal to the law, successfully arguing that a law affected a fundamental right, or classified people on the basis of a suspect category, would almost surely lead to a declaration that the law was unconstitutional.\footnote{143} Because state school finance laws involved a "right" that was not explicitly stated in the federal Constitution, but was arguably being affected by the "wealth" of a child's school district, Harper was an important decision for those interested in school finance reform.\footnote{144}

II. The Initial Legal Argument in School Finance Cases: Equality of Educational Opportunity Under the Fourteenth Amendment from Serrano to Rodriguez

Even before the Supreme Court had handed down the Harper decision, the Civil Rights Commission had predicted the possibility of future court action challenging state financing plans under the fourteenth amendment.\footnote{145} And just two years after the Commission's 1966 report on Racial Isolation in the Schools,\footnote{146} the first of the school finance reform cases challenging the constitutionality of a state's school finance system under the fourteenth amendment was decided.\footnote{147} This initial court case in the school finance reform move-
ment, however, was based not on the differences in funding among a state's school districts, which the Commission had highlighted, but on the state's failure to apportion funds based on the educational needs of children. 148

According to historians, this educational needs argument was spurred by articles published in the late 1960s, which argued that because of their socioeconomic background, disadvantaged children were unable to compete effectively against their more advantaged counterparts. 149 The authors of these articles contended that disadvantaged children actually needed more school funds allotted to their education so that they could compete on an equal basis. 150 Instead, these disadvantaged children actually received less funds for their education than their wealthier peers. 151 In the initial constitutional challenges to inequities in school funding using this educational needs argument, however, the cases were ruled nonjusticiable. 152

A. Suspect Categories and Fundamental Interests: Serrano v. Priest and the First Wave of the School Finance Reform Movement

The educational needs argument of the 1960s proved to be short-lived, and in the 1971 case of Serrano v. Priest the California Supreme Court abandoned this approach. 153 Instead, the California Supreme Court based its 1971 decision declaring California's system of financing public education unconstitutional on a more familiar standard—the difference in per pupil educational expenditures that existed among the state's school districts. 154 The Serrano court be-

In Serrano, the plaintiffs apparently made a brief reference to the educational needs argument in their initial suit. Id. at 591, 487 P.2d at 1245, 95 Cal. Rptr. at 605. The initial suit was dismissed by the district court. Id.
154 Id. at 594 n.9, 487 P.2d at 1247 n.9, 95 Cal. Rptr. at 607 n.9. The plaintiff's alleged violation of certain state constitutional provisions that the California Supreme Court had
came the first court in the nation to hold that this difference in per pupil expenditures had a significant impact on the quality of education offered in poorer school districts, and that poor children were thus denied the equal protection of the law under the fourteenth amendment.155

In reaching this decision, the California Supreme Court in Serrano first considered the plaintiffs' contention that education was a fundamental right that the federal Constitution implicitly guaranteed.156 The California Supreme Court began its analysis of this issue by examining the "indispensable" role that education plays in the modern industrial state,157 and also noted that the United States Supreme Court had recognized the fundamental importance of education in Brown. The Serrano court observed that although Brown was not controlling, it provided persuasive evidence of the importance of education in our society.158 Moreover, in comparing education with other rights that the Supreme Court had already held to be fundamental, the Serrano court maintained that education had a far greater social significance than, for example, the right to a court-appointed attorney.159 In addition, the California Supreme Court also saw a strong analogy between education and the right to vote, which the Supreme Court had also categorized as a "fundamental right."160 The Serrano court observed that education, like voting, preserved other basic rights, and, at the very least, made voting more effective.161

Given all of these factors, the Serrano court concluded that the "distinctive and priceless function of education . . . warranted, and indeed compelled, its treatment as a fundamental interest."162 In addition, based on its own interpretation of Harper, the Serrano court held that the state's financing system irrefutably classified school-

previously ruled were essentially equivalent to the equal protection clause of the fourteenth amendment. Id. The court stated that the analysis of the plaintiff's federal equal protection claim also applied to the state claim. Id.

160 Id.
161 Id. The California Constitution, the Serrano court noted, used almost the same rationale for establishing a public school system. Id. This state constitutional provision stated that schools were to be established because a general diffusion of knowledge and intelligence was essential to the preservation of rights and liberties of the people. Id. See infra note 453 for the text of the California Constitution.
162 Id. at 608–09, 487 P.2d at 1258, 95 Cal. Rptr. at 618.
children on the basis of the "suspect" category of wealth.\textsuperscript{163} These decisions placed the burden on the state to prove that the method by which it financed public schools was necessary to serve a compelling state interest. The state of California was thus required to show that a state interest was so compelling that the fundamental right to an education should be conditioned by the wealth of a child's parents, neighbors and school district.\textsuperscript{164}

The state of California's rationale for the use of local property taxes to partially fund the schools was to encourage local control of the schools' administration and financial matters.\textsuperscript{165} In evaluating this "local control" argument, the California Supreme Court observed that in terms of the goal of leaving administrative control with the school district, no matter how the state decided to finance its system of education, it could still leave decisions concerning teachers, curriculum and other matters to the local districts.\textsuperscript{166} The state's second contention, that the use of local property taxes for school funding provided school districts with local fiscal control, was met with disbelief.\textsuperscript{167} The \textit{Serrano} court termed the idea of fiscal freewill under such a system a "cruel illusion" for poor school districts.\textsuperscript{168} The court thus rejected the local control argument, and held that an absolute right to an education required that a public school financing system not make a child's education a function of the wealth of the school district in which he or she lives.\textsuperscript{169}

The \textit{Serrano} decision had an immediate impact on many courts considering school finance issues, and most courts found the \textit{Serrano} analysis of the fourteenth amendment requirement persuasive.\textsuperscript{170} Only the United States District Court in Maryland, in the 1972 case of \textit{Parker v. Mandel}, disagreed with the \textit{Serrano} conclusion that state school funding systems should be subject to the strict scrutiny of the court.\textsuperscript{171} But though the \textit{Parker} court's concerns about the \textit{Serrano} reasoning would eventually be repeated in large part by the United States Supreme Court,\textsuperscript{172} in 1971 it was the \textit{Serrano} decision

that received nationwide attention. After the Serrano decision was announced, a groundswell of school finance litigation emerged across the country, and by 1973, over thirty school finance cases based on the fourteenth amendment were working their way through the courts.

B. The United States Supreme Court Bows Out: The Impact of Rodriguez on the “First Wave” of Reform

Given the disagreement that existed among lower courts on the interpretation of fundamental rights and suspect categories under the fourteenth amendment, and the number of school finance cases working their way through the courts, it was likely that the Supreme Court would review a school finance case. In 1973, at the height of the school finance reform movement, the Supreme Court did consider a lower court decision that declared the Texas state system of financing schools unconstitutional. In San Antonio Independent School District v. Rodriguez, the Supreme Court reversed the decision of the lower court and held that the inequities in state school funding under the Texas school financing system did not violate the equal protection clause of the fourteenth amendment.

At the time the Rodriguez suit was filed, local property taxes provided 41.1% of the school budget in Texas, which resulted in significant differences in per pupil expenditures among the school districts. The state of Texas did not dispute that its significant reliance on local property taxes to fund the schools produced obvious disparities in per pupil expenditures, and that state aid failed to offset this difference. The Supreme Court noted that the state of Texas had virtually conceded that this type of system could not withstand the strict scrutiny standard, and that the state could not show a compelling state interest that justified this unequal distribution of school funds. The key issue, the Supreme Court observed, thus became whether the strict scrutiny standard needed to

Court described the analysis process of the Serrano and Van Dusart courts as "simplistic" in relation to the "suspect" categories arguments. Id.

be applied to the state school financing law.\textsuperscript{181} If the Supreme Court held that the strict scrutiny standard applied, and that the Texas system was unconstitutional, the Court recognized that it would in effect be holding the school financing systems of most other states unconstitutional as well.\textsuperscript{182}

The Supreme Court, however, held that the proper level of scrutiny for review of a state's school financing system was the rational basis test,\textsuperscript{183} and that the Texas system of financing schools was thus constitutional.\textsuperscript{184} In reaching this decision, the Supreme Court first rejected the argument that such plans were unconstitutional because they discriminated against the "poor" on the basis of the suspect category of wealth.\textsuperscript{185} In prior cases where the Supreme Court had considered discrimination on the basis of wealth as a "suspect category," the class of people in question was completely unable to pay for some benefit, and, as a result, sustained an absolute deprivation of the benefit.\textsuperscript{186} The undefined "poor" in the Texas case, however, were not totally deprived of a public education, and hence the Supreme Court held that the concept of wealth as a suspect category was inappropriately applied in the Texas school finance case.\textsuperscript{187}

In reaching its decision to apply the rational basis test in Rodriguez, the Supreme Court also rejected the argument that education was a fundamental right under the federal constitution.\textsuperscript{188} The Supreme Court reiterated the importance of education in our society as expressed in Brown and other decisions.\textsuperscript{189} The important

\textsuperscript{187} Id. at 25. The case presented by the Rodriguez plaintiffs differed from previous cases decided by the Supreme Court in which a classification based on wealth had been subject to strict scrutiny because those plaintiffs had been totally deprived of a right. Id. at 20-25. The Texas plaintiffs, however, were not arguing that they had been absolutely deprived of an education, and the Supreme Court held that the fourteenth amendment did not require absolute educational equality or precisely equal educational advantages. Id. at 23-24. In view of the infinite number of variables affecting the educational process, the Supreme Court stated that it did not see how any system could assure equal quality of education except in the most relative sense. Id. at 24. The State of Texas, through its Minimum Foundation Program, asserted that it provided an adequate education to all children in the state, and the Supreme Court held that an adequate education was sufficient to meet federal constitutional requirements. See id. at 24.
\textsuperscript{188} Id. at 29-31.
\textsuperscript{189} Id. at 50.
role that education plays in our society, however, did not mean, according to the Court, that it must regard education as fundamental for the purposes of examination under the federal equal protection clause. Instead, to determine if the right to an education was fundamental, the Supreme Court ruled that the proper approach was to examine the federal constitution to determine if the "right" was explicitly or implicitly guaranteed. A right to an education was not explicitly guaranteed in the federal constitution, and the Supreme Court held that the fact that education supported the right to free speech and the right to vote did not give education the status of an implied right. As long as the state of Texas school system provided the basic minimal skills necessary for the enjoyment of free speech and full participation in the political process, the Texas school financing system was constitutional.

In reaching its conclusion that the Texas school financing plan was constitutional, the Supreme Court also expressed a number of reservations about the school finance cases, and the Supreme Court's role in this controversy. For example, the Supreme Court did not feel that research evidence was sufficient to prove that the amount of money expended by schools actually influenced the educational achievement of children. The Court also noted that taxation was an area in which courts had traditionally deferred to legislatures. The Supreme Court was concerned that invalidating the local property tax as a basis for school funding might make all local fiscal schemes related to health, education and welfare benefits provided by local governments the subjects of criticism under the equal protection clause.

With respect to its own role in this controversy, the Supreme Court in Rodriguez indicated that the Texas school finance reform case was an inappropriate case for intervention because the Court did not have the specialized knowledge and experience necessary to justify interfering with judgments made at the state and local level. The Supreme Court further observed that every claim aris-

ing under the equal protection clause had implications for the balance of power between national and state governments under our federal system. In refusing to extend the mantle of fourteenth amendment protection to cases involving inequities in school financing systems, the Supreme Court noted that it found it difficult to imagine a case that would have a greater impact upon the federal system than a case in which the Supreme Court was being urged to invalidate the way in which almost all states had chosen to fund their own systems of public education.

The Rodriguez decision had immediate implications for two types of school finance cases: those in which decisions had already been made, and those that had been filed but not yet acted upon. In the first instance, at the time that the Supreme Court announced the Rodriguez decision, courts in Arizona, California, Kansas, Michigan and Minnesota had issued decisions declaring their respective state school financing systems unconstitutional based largely on the fourteenth amendment. Courts in these states had varying responses to Rodriguez.

In the Kansas and Minnesota cases, for example, both of which had been tried in federal district court, the courts took no further action after Rodriguez. In Michigan, however, after Rodriguez, the Michigan Supreme Court vacated its earlier 1972 decision in Milliken v. Green, in which the court had declared the Michigan system of financing schools unconstitutional. In Arizona, after the Rodriguez decision was handed down, the Arizona Supreme Court in Shofstall v. Hollins reversed a trial court's decision that the Arizona system of financing public schools discriminated against taxpayers in property-poor school districts by taxing them at higher rates for less services.

In California, however, the original decision of the Serrano court declaring the California system of financing schools unconstitutional did not change after Rodriguez, though it was affirmed on other grounds.207 The California Supreme Court had originally remanded Serrano to the trial court to determine if the facts alleged in the original 1971 case were true.208 In 1976, in Serrano v. Priest II, the California Supreme Court held that the California system of financing schools was unconstitutional.209 Instead of basing its decision on the fourteenth amendment's equal protection clause, however, the Serrano II decision was based on the equal protection clause of the state constitution. Applying the Serrano I fourteenth amendment analysis to the California state constitution, the Serrano II court held that the state plan for financing schools was unconstitutional because it classified children on the basis of the suspect category of wealth, and interfered with the exercise of a fundamental right to an education.210

In addition to those states where decisions had been handed down, the Rodriguez case had a potential impact on school finance cases in progress.211 At the time of the Rodriguez decision, thirty-five school finance cases were pending, all of which were based in whole or in part on the fourteenth amendment argument.212 Commentators assessing the impact of Rodriguez concluded that to the extent that these cases were based on the fourteenth amendment, Rodriguez had probably disposed of them.213 These commentators, however, thought it was difficult to predict the outcome of school finance cases that were based in part on their state's equal protection clause or state education provisions authorizing the establishment of public schools.214 Although those interested in school finance reform would clearly now have to turn to their state constitutions for a legal remedy to unequal school financing, it was less obvious what the response of state courts would be.215

III. THE SECOND WAVE OF THE SCHOOL FINANCE REFORM MOVEMENT: STATE BY STATE

A. The Persuasive Impact of Robinson v. Cahill

The question of the success of school finance reform in the state courts did not remain unanswered for long. In April of 1973, just days after the United States Supreme Court announced Rodriguez, the New Jersey Supreme Court in Robinson v. Cahill declared the New Jersey system of financing schools unconstitutional. The Robinson court reached this decision because it concluded that the funding disparities that existed among the New Jersey school districts did not meet the state constitutional requirement that the public school system be "thorough and efficient." The Robinson court based its holding on findings by the trial court that documented significant differences in per pupil expenditures among school districts because local funds derived from property taxes accounted for sixty-seven percent of the school budget. The trial court also found that a significant connection existed between the sums expended and the quality of the educational opportunity received. Given these disparities in educational opportunity, the New Jersey Supreme Court concluded that a thorough and efficient education was not being provided to all children, and that the state's financing system was unconstitutional.

In reaching this decision, the New Jersey Supreme Court traced the history of the state constitutional provision authorizing the establishment of public schools, as well as the history of subsequent amendments to the provision. The New Jersey Supreme Court concluded that an equal educational opportunity for all children was precisely what the framers of the constitution had in mind in mandating a thorough and efficient system of education. In concluding that the existing statutory scheme of financing public

221 Id.
222 Id.
schools did not meet the thorough and efficient standard, the court noted that the state had not even spelled out the content of the educational opportunity the state constitution required. The New Jersey Supreme Court directed the state to define the content of the education to be provided to New Jersey children, and then revise the funding system to ensure that this education would be provided to all.223

In addition to alleging that the current system of financing schools denied children from property-poor school districts a thorough and efficient education, the Robinson plaintiffs also alleged that the New Jersey system of financing schools violated the federal and state equal protection clauses by interfering with the exercise of a fundamental right, and by classifying children on the basis of the suspect category of wealth.224 With respect to the fourteenth amendment argument, the Robinson court believed that Rodriguez had eliminated its use in school finance reform cases. Courts had not yet, however, considered the use of the “fundamental rights” and “wealth as suspect category” arguments under the state equal protection clause.225

In considering whether wealth was a suspect category, the New Jersey Supreme Court observed that “wealth” was not at all suspect as a basis for raising revenues.226 Although it was true that the amount of locally raised revenues varied among school districts, the court noted that education was in this respect no different than other local government services such as police, fire and health.227 If differences in local expenditures for services handled by the local governments were in and of themselves unconstitutional, the Robinson court observed that the entire political structure of local control of local services would be fundamentally changed.228 Concurring with Rodriguez, the New Jersey Supreme Court concluded that it was unwise to find local taxation for education unconstitutional because that decision could make local taxes an equally impermissible means of providing other necessary local services.229

Although the New Jersey Supreme Court agreed with the Rodriguez decision on the topic of wealth, it believed that in defining a

229 Id. at 492, 303 A.2d at 282.
fundamental right as one that was explicitly or implicitly guaranteed in the constitution, the Supreme Court had chosen an approach that was "immediately vulnerable" upon further analysis. The Robinson court observed that the right to acquire and hold property was guaranteed in both the federal and New Jersey state constitutions, but the court did not believe that mention in a constitution automatically made property rights a candidate for preferred treatment. The Robinson court thus rejected the plaintiffs' argument that education was a fundamental right because the state constitution provided for public education. Instead, the Robinson court concluded that in determining if a state law violates the equal protection clause, the court must employ a balancing test, and weigh the nature of the restraint or denial against the apparent public justification. In balancing the state interest in local control over local services with the funding disparities among the state's school districts, the Robinson court held that the New Jersey system of financing public schools did not violate the state's equal protection clause.

The Robinson decision, then, provided a new model for school finance reform cases, but one that was not entirely helpful to those interested in reducing funding disparities among a state's school districts. Robinson demonstrated that a successful argument could be made, on the basis of a state's education provision, that unequal school expenditures were unconstitutional. The Robinson court also pointed out, however, why it considered the state equal protection clause to be an inappropriate basis for making a constitutional decision on the validity of a state's school financing plan. In rejecting both the "fundamental rights" and "wealth as a suspect category" arguments, the Robinson court left plaintiffs with a single legal basis on which a successful school finance case could be mounted. This remaining education provision argument could only be successfully argued if the plaintiffs could show that a school finance system that resulted in substantial funding disparities among the state's school districts was inconsistent with the meaning of the state education provision.

B. 1974–1984: A Decade of Mixed Results and Limited Success

One of the first of the post-*Rodriguez* decisions, the 1975 case of *Thompson v. Engelking*, illustrates the varying effect that the *Robinson* opinion had on courts that found their state systems of financing schools constitutional in the second wave of the school finance reform movement.241 In *Thompson*, the Idaho Supreme Court found its state system constitutional.
Court held that significant funding disparities among the state's school districts violated neither the federal or state equal protection clauses, nor the requirement that the state provide a "uniform" system of schools.\textsuperscript{242} It found Rodriguez dispositive of the fourteenth amendment question,\textsuperscript{243} and concurred with Robinson that if courts found local taxes for school support unconstitutional under a state equal protection argument, local taxes might be unconstitutional for all other local services funded in this manner.\textsuperscript{244}

On the issue of education as a fundamental right under the state constitution, the Idaho Supreme Court in Thompson also agreed with the Robinson court that the mere mention of education in the state constitution did not make education a fundamental right.\textsuperscript{245} The Idaho Supreme Court broke with the Robinson court, however, in its interpretation of the Idaho provision requiring the legislature to establish and maintain a general, uniform and thorough system of public, free, common schools.\textsuperscript{246} Though the New Jersey Supreme Court in Robinson had found its system unconstitutional on a similarly worded "thorough and efficient" clause, the Thompson court held that this clause did not mean that equal educational expenditures were required and that the Idaho system was therefore constitutional.\textsuperscript{247}

While courts like the Idaho Supreme Court were faced with the traditional school finance issue of disparities in funding among a state's school districts, in three cases decided in the second wave of the school finance reform movement, plaintiffs presented a somewhat different argument for declaring a state school financing plan unconstitutional. In these cases, city school districts were the plaintiffs seeking court-ordered reform.\textsuperscript{248} These city school districts presented a new argument for declaring their respective state fund-

\end{itemize}
\end{footnotesize}
ing systems unconstitutional. This argument essentially involved municipal overburden, and the difficulty that city school districts often had in getting adequate funds from a city that had many other budget needs to consider.\footnote{Hornbeck, 295 Md. at 607, 458 A.2d at 764; Nyquist, 57 N.Y.2d at 48, 439 N.E.2d at 369, 453 N.Y.S.2d at 653; Danson, 484 Pa. 415 at 418, 399 A.2d at 362.} Repeating many of the facts that the Civil Rights Commission had identified in its 1966 discussion of municipal overburden over a decade before these cases, these cities charged that they had to spend more on noneducational needs than the suburbs, and also had more poor children who needed greater, not lesser, aid for their education.\footnote{Hornbeck, 295 Md. at 607, 458 A.2d at 764; Nyquist, 57 N.Y.2d at 48, 439 N.E.2d at 369, 453 N.Y.S.2d at 653; Danson, 484 Pa. 415 at 418, 399 A.2d at 362.} In all three cases, however, courts rejected the municipal overburden argument and held their respective state systems of financing schools constitutional.\footnote{See supra note 238.}

Although the majority of the courts that considered the constitutionality of state public school funding plans in the “second wave of reform” declared their systems constitutional, in Arkansas, Connecticut, Washington, West Virginia and Wyoming, courts reached the opposite conclusion.\footnote{Dupree v. Alma School Dist. No. 30, 279 Ark. 340, 345, 651 S.W.2d 90, 93 (1985); Washakie County School Dist. No. 1 v. Herschler, 606 P.2d 310, 322 (Wyo. 1980).} In declaring their systems unconstitutional, however, courts in these five states reached identical conclusions using differing legal bases for their decisions. In Arkansas and Wyoming, for example, courts followed the \textit{Serrano II} approach and declared their systems of financing education unconstitutional on the basis of the state’s equal protection clause.\footnote{Dupree, at 344, 651 S.W.2d at 93.} In Arkansas, the reason for this decision was the court’s finding that its financing system categorized children on the basis of the wealth of their school district.\footnote{Washakie County School Dist. No. 1, at 323–24.} In Wyoming, the court also concluded that the state financing system categorized children on the basis of the school district’s wealth.\footnote{\textit{Id.} at 333.} In addition, the Wyoming court found that its system of financing schools violated the state’s equal protection clause because education was a fundamental right. The Wyoming court reached this decision because of the emphasis on education in the state’s constitution, and the basic importance of education in modern life.\footnote{\textit{Id.} at 333.
In Connecticut, the Connecticut Supreme Court in the 1977 case of *Horton v. Meskill* also declared its state system of financing schools unconstitutional on the basis of the state's equal protection clause. The Connecticut Supreme Court, however, based its decision that education was a fundamental right in Connecticut largely on the history of education in Connecticut. The Connecticut Supreme Court observed that Connecticut had recognized a duty to provide for the proper education of the young for centuries, and had a lengthy commitment to free public education. As early as 1650, Connecticut had adopted the Massachusetts provision that required towns of fifty or more households to maintain elementary schools; towns with a hundred or more households had to establish grammar or secondary schools as well.

In addition to the historical tradition of education in the state, the Connecticut Supreme Court also noted that the legislature had recognized in other contexts the state's concern for each child to have an equal opportunity to receive a suitable program of educational experiences. The current situation with regard to financial disparities between the school districts had arisen over the years, the *Horton* court noted, and needed to be corrected. The Connecticut Supreme Court therefore held that in Connecticut the right to education was so basic and fundamental that it had to scrutinize strictly any infringement of that right. The Connecticut Supreme Court then concluded that the financing system could not withstand this strict scrutiny test, and declared the public school financing system unconstitutional.

Although the *Horton* court used the history of the state's educational efforts to support the finding that education was a fundamental right, in the West Virginia case, the court used history to interpret the language of the state's education provision. In *Pauley v. Kelly*, decided in 1979, the Supreme Court of Appeals of West Virginia determined the meaning of the "thorough and efficient" clause of the state's education provision, which eventually led to a declaration in a subsequent court proceeding that the West Virginia
system of financing schools was unconstitutional. In its deliberations, the Pauley court examined the provision mandating a thorough and efficient school system in terms of the framers' intent, in terms of how other state constitutions had used the phrase, and in terms of how the words had been defined both in the past and present. Based on this information, the Pauley court identified the criteria of an efficient school system, and in 1984, a trial court determined that the West Virginia system of financing schools did not meet these criteria and was therefore unconstitutional.

In the fifth state in which courts held a school financing plan unconstitutional, the need to provide reliable funding for the schools affected the court's decision. In 1978, in Seattle School District No. 1 of King County v. State, the Washington Supreme Court overruled its 1974 decision in Northshore School District No. 417 v. Kinnear and held the state's system of financing public schools unconstitutional on the basis of the state education provision. In Seattle School District, as in Northshore School District, the case concerned the constitutionality of special tax levies, requiring voter approval, needed to support the schools. During the 1975–76 school year, forty percent of the students in the state resided in school districts that had to reduce teachers and curriculum offerings because school districts lost special levy elections. The loss of these special levies placed public education in immediate danger, the Washington Supreme Court stated, and it held the use of these special levies to fund the basic school program was therefore unconstitutional.

In reaching this decision, the Washington Supreme Court noted that the state education provision required the state to make

265 Id. at 681-707, 255 S.E.2d at 865-77.
266 Id. The New Jersey Supreme Court, for example, had held in Robinson in 1973 that the New Jersey system of financing schools was unconstitutional on the basis of this wording: the Ohio Supreme Court in Board of Education v. Walter, on the other hand, had found its financing system constitutional on the basis of virtually identical wording. 58 Ohio St. 2d 568, 387, 390 N.E.2d 813, 825 (1979).
269 Id. In Northshore School Dist. v. Kinnear, 84 Wash. 2d 685, 688, 530 P.2d 1178, 1181 (1974), plaintiffs also argued that the use of the property tax to partially fund schools was unconstitutional. Id. The plaintiffs further argued that taxpayers in property-poor school districts were denied the equal protection of the law because they paid a higher percentage of taxes for less educational services. Id.
270 Kinnear, 84 Wash. 2d at 711, 530 P.2d at 193; Seattle School Dist. No. 1, 90 Wash. 2d at 526-27, 585 P.2d at 98-99.

272 Id.
“ample provision” for the education of all children, and described education as the “paramount duty” of the state.\textsuperscript{273} A lengthy interpretation of the words of this provision, and an extensive historical analysis of the context in which the education provision was adopted, led the court to conclude that the state had a mandatory duty to provide for an ample education for all children, and that the current financing plan was insufficient to provide for a basic education.\textsuperscript{274} Special tax levies could be used for enrichment programs, the Seattle court noted, but they were an unreliable means of funding the basic education program and were therefore unconstitutional when used in that context.\textsuperscript{275}

In the second wave of the school finance reform movement, then, courts in five of the sixteen states where cases were decided between 1974 and 1984 declared their systems of financing schools unconstitutional.\textsuperscript{276} In Wyoming and Connecticut, education was declared to be a fundamental right.\textsuperscript{277} The Connecticut Supreme Court reached this decision largely because of the lengthy commitment to free public education in the state, which dated to 1650, whereas the Wyoming Supreme Court based its decision on the emphasis on education in the state’s constitution, and on the basic role of education in society.\textsuperscript{278} The Wyoming Supreme Court, as well as the Arkansas Supreme Court, also held that its state financing system was unconstitutional because it conditioned the quality of a child’s education on the wealth of his or her school district.\textsuperscript{279} In Washington and West Virginia, on the other hand, courts examined the context in which the education provision was passed, the intent of the framers, and the meaning of the words in the state education provision, before declaring that their respective state school financing plans violated their state constitution’s education provision.\textsuperscript{280}

Although courts in Arkansas, Connecticut, Washington, West Virginia and Wyoming did declare their state system of financing

\textsuperscript{276} See supra note 258.
\textsuperscript{278} Horton, 172 Conn. at 648–49, 376 A.2d at 374; Washakie County School Dist. No. 1, 606 P.2d at 310.
\textsuperscript{279} Dupree v. Alma School Dist. No. 30, 279 Ark. 340, 345, 651 S.W.2d 90, 93 (1983); Washakie County School Dist. No. 1, 606 P.2d at 310.
public schools unconstitutional, the vast majority of the state courts considering school finance cases in this second wave of the reform movement reached the opposite conclusion.\textsuperscript{281} Plaintiffs in the second wave of the school finance reform movement found that courts were not persuaded by efforts to factually distinguish \textit{Rodriguez}, and all courts making decisions between 1974 and 1984 held that \textit{Rodriguez} effectively eliminated the fourteenth amendment as a basis for seeking school finance reform. Almost all of these courts also agreed with the New Jersey Supreme Court's reasoning in \textit{Robinson}, and therefore rejected the use of the state equal protection clause as a basis for declaring a state's school finance system unconstitutional. That left plaintiffs with only one other basis upon which to constitutionally challenge a state school funding system.\textsuperscript{282} The remaining argument, however, based on the alleged violation of the state education provision, was necessarily fact-specific to a given state and plaintiffs in each state thus had to generate their own historical information to support this position.\textsuperscript{283} As the \textit{Thompson} and \textit{Robinson} cases indicated, even states with similarly worded education provisions could reach opposite interpretations of this clause depending upon the strength of the case the plaintiffs were able to present.\textsuperscript{284} Indeed, in this second wave of the school finance reform movement, the education provision argument failed more often than it succeeded.\textsuperscript{285}

Whether plaintiffs argued that funding disparities among a state's school district were unconstitutional then, or that the state's funding pattern did not take into account the municipal burden faced by cities, most of the courts considering school finance reform between 1974 and 1984 found their respective state systems of

\textsuperscript{281} See supra note 238.

\textsuperscript{283} See id.

\textsuperscript{284} See Robinson v. Cahill, 62 N.J. 473, 473, 303 A.2d 273, 273 (1973); Thompson, 96 Idaho at 799, 537 P.2d at 641.

financing schools constitutional. As this period drew to a close, the trend in favor of declaring school finance systems constitutional continued, even where significant funding differences existed among school districts.

In 1984, for example, in what would be the last case decided in the second wave of the school finance reform movement, the Michigan Court of Appeals in *East Jackson Public Schools v. Green* rejected a second challenge to the state's unequal method of funding schools and found the system constitutional. Plaintiffs in Illinois were similarly unsuccessful in a second constitutional challenge to their state school financing plan. The record for unsuccessful challenges, however, appeared to belong to Georgia, where plaintiffs actually filed four separate cases unsuccessfully challenging the constitutionality of the Georgia system of financing schools. For the Georgia plaintiffs, as for most school finance reform plaintiffs, the state by state approach to seeking school finance reform proved to be less than satisfactory.

IV. THE THIRD WAVE OF REFORM: RENEWED INTEREST IN SCHOOL FINANCE REFORM, AND A RETURN TO "EDUCATIONAL NEEDS"

A. The State Education Provision Argument Triumphs

Between 1984 and 1987, for the first time since the school finance reform movement began in the late 1960s, there were no decisions on the constitutionality of a state's plan for financing public schools. When the next decision on this issue did come in 1987, the Oklahoma Supreme Court did not even allow the plaintiffs to present their case. Instead, the court followed the dominant trend in the school finance reform movement and declared the Oklahoma state school finance plan constitutional. When the South Carolina Supreme Court followed suit in 1988 and upheld the constitutionality of that state's shared public school funding

286 See supra note 26.
288 Id. at 137–38, 348 N.W.2d at 305–06.
291 See supra note 25.
system, the effort to seek equality of educational opportunity through court-ordered school finance reform seemed to have lost much of its momentum.

Then, in 1989, within months of each other, courts in Kentucky, Montana and Texas declared their respective state school funding systems unconstitutional. This outcome was a milestone of sorts in the school finance reform movement, because it was the first time in its twenty-one year history that three states declared their systems of financing schools unconstitutional in the same year. Moreover, many similarities existed between the three cases, both in terms of the plaintiffs' cases, and the manner in which the respective courts reached their decisions.

In the 1989 Kentucky, Montana and Texas cases, for example, plaintiffs alleged the same basic fact pattern first postulated in Serrano a generation ago; that is, that public school funding, and hence the quality of education, varied significantly among school districts within the state. Following the Serrano pattern, in all three cases plaintiffs alleged that these funding disparities resulted in a lack of equal educational opportunity. In all three cases the funding variation that the plaintiffs sought to reduce was due to the partial use of local property taxes to fund the schools, which in turn could be traced to the variations in property wealth among the school districts. Following the Serrano model, in all three cases the plaintiffs also sought a declaratory judgment seeking to have the state's public school financing system declared unconstitutional. The courts in all three cases based their decisions on the premise that the state legislature would restructure the system, and

avoided ruling that exactly equal expenditures were required to equalize educational opportunity.\textsuperscript{501}

In addition, the 1989 Kentucky, Montana and Texas cases were all decided on the basis of the same legal argument.\textsuperscript{502} Following the 1973 lead of the New Jersey Supreme Court in Robinson \textit{v. Cahill}, the Kentucky, Montana and Texas courts rejected the plaintiffs' arguments that their respective state financing plans violated the federal or the state equal protection clause.\textsuperscript{503} Instead, all three courts chose to base their decisions on the meaning of the provision in their respective state constitutions that authorized the legislature to establish free public schools.\textsuperscript{504} Though the wording of the education provisions differed, the three courts followed the same procedure in analyzing the issue, as they examined the history of the constitutional provision, the intent of the framers and the meaning of the words in the statute.\textsuperscript{505}

In \textit{Helena Elementary School District No. 1 v. State}, for example, the plaintiffs charged that the Montana system of financing public schools violated the constitutional provision that the "goal of the people" was to establish a system of education that would develop the "full educational potential of each person."\textsuperscript{506} The education article of the Montana Constitution further provided that "equality of educational opportunity is guaranteed to each person of the state."\textsuperscript{507} The plaintiffs charged that because of the disparities in funding among school districts, which at the time of the suit were as high as eight to one, all children did not have equal educational opportunity.\textsuperscript{508} The plaintiffs provided both expert testimony and the results of a comparison study to establish that these funding disparities resulted in differences among school districts in educa-

tional opportunity in terms of curriculum, textbooks, materials, supplies and facilities. Given these disparities, the Montana Supreme Court declared the financing system unconstitutional.

In analyzing whether this system of financing schools violated the education provision of the Montana State Constitution, the Montana Supreme Court looked first to the constitutional debates on the provision, and to the plain meaning of its words. The education provision, the court noted, was the only place in the state constitution where a right was guaranteed. The plain meaning of the education provision, the court determined, was that every person is guaranteed equality of educational opportunity. This guarantee was binding on all three branches of the government, the court stated, and applied to each person in the state of Montana.

In terms of whether the current financing system provided such an equal opportunity, the Montana Supreme Court noted that the state’s contribution fell short of even meeting the costs of complying with Montana’s minimum school accreditation standards. As a result, school districts were forced to rely heavily on permissive and voted levies, which voters could reject. The fact that Montana had experienced fiscal difficulties in the last few years did not, the court ruled, excuse the disparities in spending in the various school districts. These disparities translated into unequal educational opportunities for students, and thus violated the Montana constitutional provision that guaranteed equal educational opportunity for all.

In Kentucky, in *Rose v. Council for Better Education*, the Kentucky Supreme Court in 1989 held that the system by which Kentucky funded its schools violated the state constitutional mandate to “provide an efficient system of common schools.” The court noted that the evidence that the plaintiffs presented clearly established that the state inadequately funded the entire Kentucky public education system. In addition, there were significant differences in

the taxable property per pupil among school districts, which translated into differences in the amount of money expended on education in a school district. This difference in per pupil expenditures in turn led to a significant difference between the poor and wealthy school districts in terms of teachers’ salaries, educational materials, curriculum and facilities, as well as a difference in educational achievement among the school districts.

In determining whether the method by which Kentucky schools were financed could be considered to meet the “efficient” mandate of the state constitution, the Kentucky Supreme Court surveyed the history of the education provision, and considered the opinions of other courts and experts as to the meaning of the term “efficient.” The court determined that “efficient” included the concept that the common schools should be substantially uniform throughout the state, and that the state should provide equal educational opportunity to all Kentucky children. The court concluded that the present system of education in Kentucky did not meet these guidelines, and emphasized that the entire system was unconstitutional, including all statutes that created, implemented and financed the system. The Kentucky Supreme Court noted that it had made its decision only on the grounds of the education provision in the state constitution, but that the basis for the opinion was that education was a fundamental right under the Kentucky constitution.

The third 1989 school finance case arose in Texas, and involved the constitutionality of the state school financing system that the United States Supreme Court had held was constitutional a generation earlier in the 1973 case of San Antonio Independent School District v. Rodriguez. In Edgewood Independent School District v. Kirby, however, the Texas Supreme Court reached the opposite conclusion. The Texas Supreme Court based its 1989 holding of unconstitutionality not on the fourteenth amendment, which had been the legal basis for the Rodriguez case, but on the state constitution’s education provision. The Texas State Constitution, like the Kentucky and New Jersey constitutions, required the legislature to es-

establish and provide an "efficient system" of free public schools. 327 Like the Massachusetts education provision, the state was to maintain schools because a "general diffusion of knowledge" was essential to the preservation of the "liberties and rights" of the people. 328

In interpreting the Texas State Constitution's education provision, the Texas Supreme Court examined the intent of the framers, the historical context in which the provision was passed, and the plain meaning of the words in the provision. 329 It noted that the provision imposed on the legislature an affirmative duty to establish an efficient system of schools. "Efficient," in turn, meant the same in 1875 when the constitution was adopted as it meant today, and implied not a system that was cheap, but one that was effective and produced results. 330 The court further reasoned that the framers could never have anticipated the existence of the type of disparities in property values that caused the unequal funding that existed among Texas school districts in 1989. When the Texas education provision was adopted in the 1800s, school districts were uniformly funded. The Texas Supreme Court therefore held that the present financing system, which resulted in per pupil expenditures ranging from $2,112 to $19,333, was not constitutional because children from property-poor school districts were not receiving an efficient or effective education which "diffused knowledge." 331

The 1989 Kentucky, Montana and Texas cases, then, inaugurated a new phase in the school finance reform movement. Based on the model first developed in Serrano v. Priest in 1971, courts in these three cases held that funding disparities among a state's school districts did affect the quality of educational opportunity that a child received. 332 Following the model developed in the 1973 case of Robinson v. Cahill, the courts in all three of these cases rejected equal protection arguments and instead based their decisions of unconstitutionality on the meaning of the state constitution's education provision. 333 In reaching these decisions, the courts each first de-

terminated the meaning of the state education provision by examining the plain meaning of the words, the intent of the framers, and the historical context in which the clause had been adopted. Having determined the meaning of the constitutional provision, each court then examined the current system of financing schools to determine if the funding inequities that existed among the state's school districts violated the state constitutional provision.

B. The Revival of the "Educational Needs" Argument

At the same time that reformers in Montana, Kentucky and Texas found renewed success in arguing that unequal school expenditures among a state's school districts were unconstitutional, the "educational needs" argument was revived. The essence of the educational needs argument, first raised in 1968 in *McInnis v. Ogilvie*, is that equal educational opportunity requires expenditures based on the educational needs of the children. The concept behind this argument is that many children are educationally disadvantaged because of their background and therefore cannot compete with advantaged youngsters. According to this argument, these disadvantaged children need special compensatory programs if they are to achieve equally with other children.

The Wisconsin Supreme Court, in the 1989 case of *Kukor v. Grover*, was the first court to consider, and to reject, this revived educational needs argument. One year later, however, in the 1990 case of *Abbott v. Burke*, the New Jersey Supreme Court defined equal educational opportunity in terms of educational needs and held that certain poorer urban school districts did not provide a thorough and efficient education as required by the state constitution's education provision. The New Jersey Supreme Court had pre-

540 148 Wis. 2d at 484, 436 N.W.2d at 574. It was the second time that the Wisconsin Supreme Court had dealt with school financing issues, having previously ruled in *Buse v. Smith* that a plan to have wealthy school districts share their excess revenues with property poor school districts was unconstitutional. *Buse v. Smith*, 74 Wis. 2d 550, 550, 247 N.W.2d 147, 147 (1976).

viously declared its entire system of financing schools unconstitutional in the 1973 case of *Robinson v. Cahill* because funding disparities among the state’s school districts failed to provide children with equal educational opportunity through equal access to equally funded school programs.342 In the 1990 *Abbott* case, the New Jersey Supreme Court examined the financing system that the legislature had designed to meet the *Robinson* court’s 1973 constitutional objections.343

The *Abbott* court held that despite changes in the state’s plan for financing public schools, vast disparities in educational expenditures in the New Jersey school system continued to exist because of differences in property values.344 These fiscal differences, caused by the continued use of the property tax to fund schools, translated into differences in the input into a child’s education. The *Abbott* court noted that the present law did allow the commissioner of education to order a district to increase its taxes if its educational system was deficient. The court, however, accepted the *Abbott* plaintiffs’ municipal overburden argument, which had been used by earlier plaintiffs in the 1970s, and reasoned that this provision was useless because the cities were already suffering from municipal overburden and had no funds. The court also noted that the state had presented convincing evidence that money alone would not result in equality of educational opportunity.345 The New Jersey Supreme Court, however, concluded that money could make a difference, and that poor urban students were constitutionally entitled to the same type of educational opportunity that money bought for other children.346

In reaching its decision that the current financing system was unconstitutional as applied to certain court-identified poor urban school districts, the New Jersey Supreme Court noted that students in poorer urban districts were unable to participate fully as citizens and workers in society, or to achieve any level of equality in society.347 Without an effective education, these poor students were likely to remain isolated in deteriorating cities.348 The New Jersey Supreme Court also noted that the educational deficiencies of these

poor urban school districts had an impact not only on the students, but on the social, cultural and economic fabric of the state. Failure to correct the deficiencies in the educational system, the court believed, would likely lead to despair, bitterness and hostility on the part of the minority, undereducated poor.

The New Jersey Supreme Court in Abbott held that in order to provide a thorough and efficient education in these poorer districts, the state must ensure that it addressed the special disadvantages of these students so that they received an education equally effective to that provided their more affluent peers. The court ruled that school funding for these school districts could therefore not depend on the fiscal ability or will of local school boards, but must be guaranteed by the state. The New Jersey Supreme Court in Abbott made this ground-breaking decision even though the state of New Jersey at the time of the suit had one of the highest per capita expenditures for public education in the nation. For despite this financial effort, the court believed that students in these poor urban districts were not receiving a thorough and efficient education.

In the closing paragraphs of the Abbott opinion, the New Jersey Supreme Court reminded the parties involved in this litigation that it was indeed the students and their education that was the real focus of this school finance case. After the court had completed all of its legal analyses of school finance issues, the court noted that it was still left with the need to deal with these students and the reality of the poverty and isolation of their lives. These poor children were not being educated, the court held, and it found this constitutional failure to be "clear, severe, extensive, and of long duration." In defining equal educational opportunity in terms of student needs, the New Jersey Supreme Court in Abbott added yet another chapter to the evolving and changing story of the legal concept of equal educational opportunity.

Beginning in 1989, then, the school finance reform movement entered a new phase. After over two decades of almost continuous litigation over disparities in school funding among school districts within the same state, more courts in 1989 declared their systems of financing public schools unconstitutional in a single year than

549 Id. at 392, 575 A.2d at 411.

had done so in the previous twenty-one years.\footnote{See supra note 25.} Defining equality of educational opportunity in terms of the need to reduce funding disparities among school districts, and to provide equal access to equally funded programs, the three cases decided in 1989 gave new life to a movement that previously had limited success.\footnote{Compare Rose v. Council for Better Educ., 790 S.W.2d at 190; Helena Elementary School Dist. No. 1, 236 Mont. at 55, 769 P.2d at 689–90 and Edgewood Indep. School Dist., 777 S.W.2d at 398 with Robinson v. Cahill, 62 N.J. 473, 303 A.2d 273 (1973).}

In addition to experiencing new success with the traditional school finance case model developed in \textit{Serrano v. Priest}, the emergence of a second branch characterized this new phase of the school finance reform movement.\footnote{See Abbott v. Burke, 119 N.J. 287, 295, 575 A.2d 359, 363 (1990); Kukor v. Grover, 148 Wis. 2d 469, 484, 436 N.W.2d 568, 574 (1989).} Based on the educational needs argument first used in 1968, a 1990 court decision declared a state system of financing schools unconstitutional in part because it did not provide sufficient funds to meet the needs of minority inner-city youth and provide them with an equally effective education.\footnote{Abbott, 119 N.J. at 295, 575 A.2d at 363.} In addition to requiring that sufficient funds be allocated to meet the special needs of these disadvantaged children, this court also held that the state must ensure that the necessary funds were available.\footnote{See id. at 385, 575 A.2d at 408.} This court focused its attention on the children involved in the case, and held that school funding for these disadvantaged children could not depend upon the ability or willingness of local school districts to provide the programs that these children needed to be able to participate fully in society.\footnote{Id. at 394, 575 A.2d at 412.}

V. The Statistical and Constitutional Bases for Challenging the Legality of the Massachusetts System of Funding Public Schools

The history of the twenty-two year school finance reform movement suggests that plaintiffs considering a constitutional challenge to their state's system of financing public schools need to collect facts specific to their state in three key areas in order to assess the viability of a potential case. First, plaintiffs need information that focuses on their state's current system of financing schools in order to determine if it is characterized by the three factual bases used
successfully in previous school finance cases; namely, if significant funding differences exist among school districts caused by the use of local property tax revenue or municipal overburden; if the reliance on local property tax revenue, or the lack of guaranteed state funds, results in school districts being unable to be assured of adequate funds to provide children a basic education; and if the disadvantaged children in the state are receiving the type of education that compensates for their background and allows them to achieve in school and society.

A second area in which potential plaintiffs in a school finance reform case need to collect facts specific to their state involves the state's equal protection clause, including the history of education in the state, and the relative emphasis that the state constitution places on education. Previous plaintiffs have successfully demonstrated that education was a fundamental right in their state by presenting information on the history of education in their state, the state constitution's emphasis on education, and other contexts in which the legislature addressed the question of equality of educational opportunity. This argument, of course, presupposes that the state has an equal protection clause, or, as in the case of Massachusetts, several clauses considered to be the equivalent of the fourteenth amendment.

A third area in which potential plaintiffs need to collect facts specific to their state involves the meaning of the state provision on education. Previous plaintiffs have examined the history of the education provision, the context in which the state's education provision was adopted, the intent of the framers, and the plain meaning of the words in order to support the argument that unequal financing is unconstitutional. Massachusetts plaintiffs can be ex-

561 See, e.g., Rose, 790 S.W.2d at 190 (unequal school funding among school districts); Helena Elementary School Dist. No.1, 236 Mont. at 55, 769 P.2d at 691 (adequate guaranteed funding not available).

562 See, e.g., Rose, 790 S.W.2d at 190; Helena Elementary School Dist. No.1, 236 Mont. at 55, 769 P.2d at 691.

pected to follow a similar pattern, because Massachusetts courts in previous unrelated cases have used similar guidelines, construing the constitution in light of the conditions under which it was framed, the ends it was designed to accomplish, the benefits it was expected to confer, and the evils it hoped to remedy.

This section, then, presents statistical and historical data that, based on previous successful school finance cases, may prove useful to potential plaintiffs assessing the viability of a constitutional challenge to the Massachusetts system of financing public schools. It is designed to ascertain whether the current educational financing system in Massachusetts contravenes the fourteenth amendment by totally depriving children of an education, or depriving children of the minimum skills that they need to participate in the political process; whether the current financing system provides unequal funding that supports the proposition that a child's education in Massachusetts is illegally conditioned on the "suspect" category of wealth and violates the state's equal protection clause; whether there is evidence that education in Massachusetts is a fundamental right which under the state's equal protection clause must be made available to all children on equal terms; and whether unequal funding among school districts, lack of adequate guaranteed state funding to provide a basic education to all children, or failure to provide an education that effectively meets the needs of disadvantaged youth violates the state constitution's education provision.

---

566 See infra note 453 for a complete text of this portion of the Massachusetts Constitution. In interpreting the Massachusetts Constitution, one must construe the language of the constitutional provision in accordance with the common understanding at the time of the adoption of the constitution. Raymer v. Trefrey, 239 Mass. 411, 412, 132 N.E. 190, 191 (1921) (discussing tax abatement due under constitution). Courts are to interpret words and phrases in the sense most obvious to common understanding. Opinion of the Justices to the House of Representatives, 243 Mass. 605, 607, 140 N.E. 463, 464 (1923) (discussing proposed constitutional amendment). In construing constitutional provisions, Massachusetts courts look to the history of the times when the state made the constitution. Opinion of the Justices to the House of Representatives, 254 Mass. 617, 619, 151 N.E. 680, 681 (1926) (discussing applicability of referendum to proposed apportionment bill).

568 See, e.g., Robinson, 62 N.J. at 473, 303 A.2d at 273.

A. The Statistical Basis for a Constitutional Challenge to the Massachusetts System of Financing Schools

Chapter 71 of the General Laws of Massachusetts requires that all towns and cities in Massachusetts maintain public schools. The state funds its schools through state aid, local property taxes and federal funds. According to the statute, state funds are provided under chapter 70 in order to promote the equalization of educational opportunity, reduce reliance on the local property tax, and promote the equalization of the burden of the cost of school support.

While the state does provide aid to schools, the majority of the funds needed to support public schools in Massachusetts in fiscal year 1988 came from property tax revenue raised by cities and towns. Thus, in fiscal year 1988, on average, 53.8% of the schools' budget came from local funds raised by property taxes. Massachusetts school districts varied significantly, however, in terms of their ability to raise funds because of differences in local property values. This property value difference, in turn, was reflected in varying school expenditures, with differences of $2,000 per pupil, or $60,000 per thirty-child classroom, not unusual. The amount of local funds that a school district contributed to its schools also varied somewhat depending on the percentage of its budget that the municipality allocated to support the schools, and the willingness

575 Mass. Gen. L. ch. 70, § 2 (1988). In fiscal year 1988, the Commonwealth of Massachusetts, through this general fund and additional programs, contributed 38.76% of the overall budget of Massachusetts schools. See generally School District Comparisons, supra note 374. In terms of individual school districts, the actual contribution that the state made to the education effort varied considerably. Id. Some cities, for example, are heavily dependent on state funds to support their schools. State funds accounted for 85% of Lawrence's school budget, 70% of Holyoke's budget, and 57% of Lynn's budget. In other districts, state funds make up a relatively low percentage of the overall school budget. State funds thus accounted for only 11.8% of Brookline's budget, 12.8% of Newton's budget, 14% of Watertown's budget, and 27% of Boston's budget. Id.
576 Id.
577 Id.
578 See generally id. Copies of these documents were obtained at the Massachusetts Department of Education. For "All Day Programs," the per pupil expenditure in 1989–1990 ranged from $2,389 (Wales) to $36,465 (Gosnold), with the state average $4,526 per pupil. Id. (Summary of All Day Programs). A total of 18 towns spent under $3,000 per pupil per year of all day programs. Id. A total of 42 spent over $6,000 per pupil. Heath had only a special needs program and was not included in these figures. Id.
of the people to assess themselves for local municipal services, including schools.  

In addition to differences in fiscal ability and willingness to expend money on public education, school districts in Massachusetts also vary in the demands placed on the schools because the low-income, minority, bilingual and limited-English speaking populations in Massachusetts are not evenly distributed. Statewide, for example, in fiscal year 1988, 16.1% of the children in public schools were minorities, and 11.2% were considered "low income." Less than ten percent of the children statewide were classified as "bilingual," and approximately four percent were classified as having "limited English." In contrast to these state averages, in some Massachusetts towns over half of the children are low-income and bilingual, while in other towns this same population is less than three percent of the public school student body. Those towns with more special populations tend to be funded at a lower level than towns with relatively few special needs children.

In addition to the significant differences in per pupil expenditures which exist among Massachusetts school districts, some commentators have characterized the entire school financing system in Massachusetts as inadequately funded. Many Massachusetts school districts, for example, are currently facing severe budget problems. In Massachusetts, school districts must compete with other municipal programs for their share of funding from property tax revenue. In light of the economic downturn, cities are asking their local school districts to take their share of the budget

580 Id.
581 Id.
582 Id.
583 See generally id. Newton, for example, had less than two percent of its students classified as low income in 1988; less than three percent had limited English, and a little over ten percent were bilingual. Newton, however, expended $5,873 per pupil, well above the state average and thousands of dollars per pupil above the expenditure level of school districts like Lawrence, Holyoke and Lynn, which had large numbers of poor, minority, bilingual or limited English-speaking children. Id.
586 Id.
587 Id.
In some cases these budget cuts have resulted in such severe curtailments of the school programs that school accreditation is threatened.

For the first time in twenty-one years, a Massachusetts high school risked losing accreditation in the spring of 1991; in total, fifteen Massachusetts high schools were in danger of losing their accreditation in 1990–91. Most of the troubled schools, according to Robert O'Donnell, the Chairman of the New England Association of Schools and Colleges, were in blue-collar communities that could not afford to fund their schools adequately. O'Donnell blamed Proposition 2 1/2 for this problem because it limits the amount by which local taxes may be raised without resort to a special election to override the 2 1/2 percent limit on new spending. In Dracut, for example, the senior high school was put on probation last year because of poor facilities. Last spring, however, despite this probationary status, the voters failed to pass a Proposition 2 1/2 override. Prior to the passage of Proposition 2 1/2, school boards could have sought state intervention when schools were inadequately funded, but no such option now exists.

Other commentators, however, pinpoint not Proposition 2 1/2, but mismanagement of funds and inadequate state aid as the source of school funding problems. A recent study of public spending in Massachusetts indicates that Massachusetts spends approximately $900 less per public school pupil than it would be expected to spend given the state's characteristics. In contrast, Massachusetts spends about $1,500 more per person for public welfare than might nor-
mally be expected.\textsuperscript{399} In 1990, Massachusetts ranked forty-fifth in the nation in terms of the percentage of state-generated school funding.\textsuperscript{399}

Regardless of the cause, the lack of adequate guaranteed funds may be affecting both the children and the teachers in Massachusetts public schools. Between 1989 and 1990, the percentage of students in Massachusetts passing state-mandated minimum competency tests in grades three, six, and nine dropped for the first time since the state administered the tests in 1987.\textsuperscript{400} A spokesman attributed the statewide decline in scores to cuts in the state education budget, loss of support staff and special enrichment programs, and the layoff threat that loomed over 10,000 teachers last year.\textsuperscript{401} Indeed, in some municipalities like Boston, conflicts over appropriations between the school committees that administer the schools, and the city government that allots city funds, continued throughout the year, with threatened layoffs and program cuts still being proposed well after school had begun.\textsuperscript{402}

The current system of financing public schools in Massachusetts, then, is characterized by significant differences in per pupil expenditures among the state's school districts.\textsuperscript{403} Children from poor areas of the state, some of whom have high educational needs, have significantly less money spent on their education than children in more affluent areas of the state.\textsuperscript{404} Though the state legislature in chapter 70 legislation recognized the state's responsibility to fund the schools, the need to equalize the burden of school support, and the need to reduce the reliance on the property tax, the state of Massachusetts provides less than half of the funds needed by school districts to support state-mandated schools,\textsuperscript{405} and apparently did not provide sufficient school funds to ensure that all schools could meet even minimum accreditation standards.\textsuperscript{406} In addition, school

districts vary considerably in their ability to raise funds because of differences in property tax values. Moreover, cities are allowed to expend varying portions of their budget for public education, and to tax themselves to support the schools at varying rates. Yet, in the wake of Proposition 2 1/2, the state has left school districts, and the children they serve, with nowhere to turn if voters fail to approve the local funds needed to run the schools.

B. The Constitutional Basis for a Challenge to the Legality of the Massachusetts System for Funding Public Schools

The picture of Massachusetts schools in 1990 painted by these statistics—threatened loss of accreditation, state funding among the lowest in the nation, thousands of dollars' difference among school districts in per pupil expenditures, falling test scores in basic skills areas—seems to be in sharp contrast to the Massachusetts historical tradition of educational excellence. If one examines the history of public education in Massachusetts, one finds that even in colonial times Massachusetts was a leader in public education. Indeed it was the model of public education developed by the Puritans of Massachusetts that provided the very principles upon which all American public education is based. Moreover, it was in part the contribution that the Massachusetts public education system had made to the struggle to form a democratic government in America that led the framers to include an education provision in the first Massachusetts constitution. According to historians, this unique constitutional provision embodied a conception of education “far ahead of its time.”

413 Cubberley, supra note 409, at 89–90.
Massachusetts adopted the education provision in its state constitution in 1780 as part of the original Massachusetts Constitution, and it remains unchanged today.\textsuperscript{414} Penned by John Adams, it was the first state provision for education in America that was directly ratified by the people, and it was unique in two other respects. First, it was apparently the only place in the Massachusetts Constitution in which the word “duty” was used, and thus the only area in which the people assigned to the legislature an affirmative duty to act.\textsuperscript{415} Second, the education provision was unique, according to historian Hart, simply because it existed.\textsuperscript{416} Most states during this period had no provision for public schools in their constitutions at all.\textsuperscript{417}

\begin{footnotesize}
\begin{enumerate}
  \item Compare \emph{Papers of John Adams}, supra note 412, at 236, 260 (draft of constitution) with \textit{Mass. Const.} pt. II, ch. V, § II (1988). The preliminary deliberations on the Massachusetts Constitution actually date from October of 1779, when delegates from three towns met in Cambridge for the Constitutional Convention. \textit{Id.} These delegates appointed Convention President James Bowdoin, Samuel Adams and future United States President John Adams to draft the constitution. \textit{Id.} This subcommittee turned the writing of the draft over to former schoolteacher John Adams, who, in penning the Massachusetts education provision, wrote the first state provision for education that was directly ratified by the people. \textit{Id.} Reportedly, Adams' favorite section of the constitution, this provision reads:

\begin{quote}
Wisdom and knowledge, as well as virtue, diffused generally among the body of the people, being necessary for the preservation of their rights and liberties; and as these depend on spreading the opportunities and advantages of education in the various parts of the country, and among the different orders of the people, it shall be the duty of the legislatures and magistrates, in all future periods of this commonwealth, to cherish the interests of literature and all the sciences, and all seminaries of them; especially the university at Cambridge, public schools, and grammar schools in the towns; to encourage private societies and public institutions, by rewards and immunities, for the promotion of agriculture, arts, sciences, commerce, trades, manufactures, and a natural history of the country; to countenance and inculcate the principles of humanity and general benevolence, public and private charity, industry and frugality, honesty and punctuation in their dealings; sincerity, good humor, and all social affections and generous sentiment among the people.
\end{quote}

\textit{Id.} The wording of this provision is attributable solely to John Adams, as the Convention and the people of Massachusetts approved the draft of the provision with no change, and little dissent. \textit{Id.}

\item A. Hart, \textit{Commonwealth History of Massachusetts} 207 (1929).

\item Cubberley, supra note 409, at 94–95. Historian E.P. Cubberley reported that New Hampshire, New Jersey, Delaware, Maryland, Virginia, South Carolina and New York, for example, all framed constitutions in 1777, and none made reference to education. \textit{Id.} Similarly, Kentucky (1792), Tennessee (1796), Louisiana (1812) and Illinois (1818) made no reference to education in their first constitutions. Of the states that Cubberley noted had “good provisions” for education by 1820—Indiana, Maine, Massachusetts, New Hampshire and Vermont—all but Vermont had apparently based their education provision on sentiments expressed in the Massachusetts provision. The Vermont constitutional provision for education in 1777 expressed a much different idea on education from that which John Adams would pen, as it provided that the legislature should establish schools to instruct youth “at low prices.” \textit{Id.}
\end{enumerate}
\end{footnotesize}
The success of John Adams in securing approval for the inclusion of a provision on education in the Massachusetts Constitution was, in fact, a feat other colonial leaders found difficult to achieve.\textsuperscript{418} Thomas Jefferson, for example, had proposed in 1779 that Virginia approve comprehensive school legislation, but he could not win approval for his proposal.\textsuperscript{419} Historian Cubberley noted that Jefferson had difficulty winning approval for this concept because no precedent existed for public schooling in Virginia for Jefferson to build on.\textsuperscript{420} Colonial Virginia had only provided schools for the poor, and had no history of support for public education. In Massachusetts, in contrast, the state had mandated compulsory public schooling that served all children for one hundred and fifty years before John Adams' constitutional provision on education was presented to the voters for approval.\textsuperscript{421}

The tradition of public education in Massachusetts, in fact, dated from the earliest days of the colonial period.\textsuperscript{422} The Puritans of Massachusetts were the first to give form to the concept of free public education—one of the most important ideas in our country's history.\textsuperscript{423} Through a set of four laws passed in 1634, 1637, 1642 and 1647, the Massachusetts Bay Colony laid the foundation upon which all American public schools were constructed. These laws established important new ideas in education: that each town must provide schooling for all children, that the schools would be sup-

\textsuperscript{420} Id. at 89 n.1.
\textsuperscript{421} See G. Martin, The Evolution of the Massachusetts Public School System 83 (1923). By 1700, there were 29 Latin grammar schools in Massachusetts; all but 10 of the secondary schools in existence in colonial America in 1700 were, in fact, found in Massachusetts. See Cubberly, supra note 409, at 30, fig. 6. These Latin grammar schools contributed much to the fame of the colony as an education center, and it was the grammar schools of Boston, Braintree, Cambridge, Charlestown, Dorchester, Roxbury and Salem that were the main feeder schools to Harvard. Id. at 18 n.1, 81 n.1.

\textsuperscript{422} K. Paulos [Strickland], An Historical Review of Curriculum Research, 1918–1976, 12 (1976) (Doctoral Dissertation available through Dissertation Abstracts). The Puritan schools, like all of the earliest schools in the United States, were based largely on ideas and institutions which the colonists brought from Europe. The purpose of the colonial schools in the United States, like their counterparts in Europe, was based in the church and religion. The real concern of the colonists was that all children learn to read in order to know the word of God. Id. at 13. Closely associated with the religious aim of instruction was the desire for schools to provide ethical and moral training. Id. at 14. Aims of education concerning the development within pupils of personal and social characteristics such as truth, honesty, justice, kindness and morality were generally included in statements of purposes of schools. The religious motive, however, was by far the dominant motive underlying popular education in the period. Id.

\textsuperscript{423} Cubberley, supra note 409, at 24.
ported by equalized and compulsory taxation, and that the state could compel parents to send their children to school.\footnote{424}{Id.} Moreover, in contrast to schooling in other parts of colonial America, the Puritans intended the public schools to serve all children and not simply the poor, and the schools were to serve the state, and not just the church.\footnote{425}{Id.} Though the principle of free public education was not recognized in all of the northern states in the United States of America until 1850, the Massachusetts tradition of free public state-supported compulsory schooling was codified by 1647.

The success that Adams had in penning the first state education provision directly ratified by the people, then, was in part due to the strong Puritan tradition of public education that dated from the mid-seventeenth century. It was a tradition that was very much alive when Adams wrote the Massachusetts State Constitution, because the character of public schooling in 1780 was largely unchanged from Puritan times. Throughout the Revolutionary War period, for example, as during the Puritan era, few textbooks were available.\footnote{426}{Id.} As a result, the education offered when Adams wrote the state constitution, like the schooling provided in Puritan com-

\footnote{424}{Id.}{In colonial America, at least three clearly marked conceptions of education emerged in early American education. The parochial school concept, represented by Protestant Pennsylvania and Catholic Maryland, saw the church as controlling education with state interference discouraged. In these schools, education was totally dominated by church purposes. A second conception of education, reflecting the attitude of the Church of England, was present in Virginia, New York, New Jersey, Delaware, the Carolinas and Georgia. \textit{Id.} These colonies conceived of public education as intended chiefly for orphans and children of the poor; children from better classes attended private schools. \textit{Historical Review, supra} note 422, at 14. In New England, a third concept of education consisted of a religious state supporting an educational system of common schools, Latin grammar schools and a college. Significantly, the schools were seen as serving both religious and civic ends. Moreover, the schools were to instruct all children and be supported by the community. Our modern American school system evolved out of this concept of education following the separation of church and state. \textit{Id.}}

\footnote{425}{Id.}{In evaluating these early laws, Massachusetts historian George Martin noted that it was important to recognize that the idea underlying these laws was neither paternalistic nor socialistic. \textit{See Martin, supra} note 421, at 87-88. Schools were to be maintained not because education was in the best interest of the child, but because the state would suffer if the child was not educated. The Massachusetts Bay Colony established schools not because they wanted to relieve parents of the responsibility of educating their children, but because the Colony would have more assurance that all children were being educated if the state provided schools. \textit{Id.}}

\footnote{426}{Cubberley, \textit{supra} note 409, at 23. At North Grammar School, for example, the curriculum was described as "the \textit{Accidence} . . . \textit{Aesop Fables} . . . \textit{Clarke's Introduction} . . . \textit{Tullus Epistles} . . . \textit{Homer}." A scholar who attended John Lovell's Latin School in Boston from 1752 to 1759 reported: "We studied Latin from 8 o'clock till 11, and from 1 till dark . . . ." \textit{See R. Seybolt, The Public Schools of Colonial Boston, 1663-1775, 72-73 (1969).}}
communities, was much simpler than today, and quite uniform throughout the commonwealth. As simple as this schooling was, however, the schooling offered in Massachusetts when the state constitution was adopted was significantly superior to that available in other colonies both in terms of the number of schools, and their reputation. And though there were apparently some inland districts around the time of the Revolutionary War that were reluctant to continue their financial support of town schools, Massachusetts nevertheless passed the education provision in the state constitution with little opposition.

427 Cubberley, supra note 409, at 111. Although the character of public education remained generally unchanged from colonial days, after 1750, two gradual changes in education occurred in the Massachusetts Bay Colony that had a profound effect not only on schools in Massachusetts, but also on the future organization of public schools across the United States. One key change that would affect the nature and control of the public schools in Massachusetts was the waning of religious influence throughout the colony. Id. at 59. By the end of the 1600s, town taxes supported schools and the only power of the minister was to accompany the town authorities in the visitation of schools. Id. at 74. The public schools in Massachusetts thus gradually moved from being "church" to state schools. Id. at 74-75. Massachusetts schools had always been placed under civil control, but before 1700 the civil and religious authorities were the same. Id. at 73. After 1750, the schools were clearly a function of the civic government, and by the time the Revolutionary War was fought, the people of Massachusetts saw the schools as under the control of the state. Id. at 75.

This decline in the importance of religion, in the schools and in the everyday life of the colonists as well, occurred in conjunction with another change—the breakdown of the New England "town." Id. at 68. Originally, each New England settlement was a unit varying in size from 20 to 40 square miles, and each of these units were called "towns." At the center of each town was a meeting house, and later the town school and town hall were built there. Id. at 69. All colonists had to live within one-half mile of the town center, send their children to town schools, and attend town meetings where the issues of the town and colony were discussed. Toward the end of the 1600s, this compact form of settlement disintegrated as the colonists began to scatter out and live on farming land. New settlements arose within the towns that were miles away from meeting halls and schoolhouses. The scattered colonists could not easily attend church in winter, and children could not possibly attend school. Id.

By 1725, there were many isolated settlements in the Massachusetts Bay Colony. Id. at 70. The colonists began to subdivide the town, and each subdivision fought for and soon obtained "local" rights. The first "local" right obtained by the subdivisions was to appoint their own minister, and then the subdivisions won the right to maintain their own roads. This growth of district-consciousness affected the schools, and each district either wanted its own school or it wanted the town school moved around the town so that all children had equal access to the school. Id. at 72-73. The colonists first tried to solve this problem by moving the town school from district to district. Later, each district was allowed to take back its tax from the town, and each district paid for and maintained its own school. By 1789, each school district in Massachusetts was able to elect school trustees, levy school district taxes and select teachers. This rise of the school district as the unit for school maintenance would eventually modify the future educational administration in almost every state, as, once again, a Massachusetts innovation set the pattern for American education. Id. at 68.

428 See generally id. at 17-31.
429 Id. at 59. Cubberley reported that younger people had founded the new towns
The state provision on education penned by John Adams, then, not surprisingly reflected this continuing Puritan tradition. In addition, Adams, like other colonial leaders, recognized the importance of the Puritan tradition in education for the future of Massachusetts and the nation. As early as 1765, for example, Adams had discussed the importance of the Puritan heritage and their educational efforts in a "Dissertation on the Canon and Feudal Law." He considered the Puritan tradition in Massachusetts to be the ideal that his generation should follow. Adams and other state leaders appreciated the contribution that the educational system founded by the Puritans had made to the movement for independence. As Governor of Massachusetts, John Hancock noted that education was the most efficient of the means by which the government had been raised to its "present height of prosperity." The early schools, he wrote, had enabled citizens to form and establish a civil constitution calculated to preserve their rights and liberties.

The education provision that John Adams penned, however, reflected not only the Puritan heritage, but also the new role that the leaders of a new democratic nation envisioned for education. John Adams, like many state and national leaders, perceived the schools as an arm of the civil government that would provide the people with knowledge of use to them in their moral, political and located in the wilderness away from the coast, and they had less interest in religion and learning than the original colonists. The inland towns also found financial support of public schools a heavy burden, and by 1750 there was a clear desire on the parts of the western towns for relief at least from the maintenance of a Latin grammar school, which seemed to many to be inadequate for the needs of the youth of a new land. Id. at 61-62, 61 n.1.

In a 1779 letter to John Adams, Samuel Adams wrote of his great fear that some of the gentlemen in the "Country" had begun to think that supporting public schools was too great a financial burden. H. CUSHING, IV THE WRITINGS OF SAMUEL ADAMS, 1778-1802 124 (1908). Id. "I wish," he wrote, "that they could hear the Encomiums that are given to New England by some of the most sensible and publick spirited Gentlemen in the southern States, for the Care and Experience which have been freely borne by our Ancestors & continued to this time for the Instruction of youth . . . ." Id. If "Virtue and Knowledge," Samuel Adams continued, "are diffused among the people then [the people] will never be enslaved." Id. Samuel Adams, who later became Governor of Massachusetts, concluded that he hoped that his countrymen would never depart from the principles and maxims that the Puritans had handed down. Id.

435 See generally id., at 88-91.
civic duties.436 The legislature was to “cherish” the elementary and secondary schools, and all types of educational institutions, and to promote a broad range of practical and academic subjects, including agriculture, arts, sciences, commerce, trades, manufactures and natural history.437 This schooling should include, Adams observed, “not merely . . . children of the rich and noble, but [children] of every rank and class of people, down to the lowest and poorest.”438 Several years later, in 1793, Governor John Hancock confirmed that Massachusetts public schools apparently were meeting this goal, as he observed in an address to the state legislature that the grammar [elementary] and secondary schools offered “equal advantages” to rich and poor.439

In describing the type of education that was to be universally offered to the rich and the poor, Adams intentionally painted a broad picture of “education.”440 This intentionally broad portrayal of education in the constitutional provision was matched by a broad range of values that education was expected to inculcate in the people.441 Historian Hart interpreted this portion of the constitutional provision on education as describing a new role for the school in terms of the socialization of children.442 He noted that the education provision was a general plea for the diffusion of “virtue” as well as “knowledge,” and reported that Adams adopted this concept of “virtue” from the French philosopher Montesquieu.443 Virtue meant, in essence, that the people would be capable of using their own power wisely, and when necessary, would sacrifice their own

436 Gordon, supra note 432, at 15. Adams emphasized this civic purpose for education, and the importance of a broad and universal education, when he wrote:

The instruction of the people in every kind of knowledge that can be of use to them in the practice of their political and civic duties as members of society . . . ought to be the care of the public, and of all who have any share in the conduct of its affairs, in a manner that never yet has been practiced in any age or nation.

Cubberley, supra note 409, at 90.

438 Cubberley, supra note 409, at 90.

439 Id.

440 See Papers of John Adams, supra note 412, at 233. One immediate objective that John Adams had in writing this section, historians note, was the establishment of an academy of men interested in arts, natural science and natural history, especially that of the United States. Adams reportedly suggested that such an institution, which he hoped to model on the great academies of England and France, be founded in 1779. In 1780, the year the constitution was adopted, Massachusetts did indeed charter the “American Academy of Arts and Sciences.” Id.

442 See Hart, supra note 416, at 207.

443 Id.
immediate good for the public good.444 In addition to encouraging the development of “virtue,” the constitutional provision also reflected the belief that education could inculcate a wide range of moral qualities, including humanity and general benevolence, public and private charity, industry and frugality, honesty, sincerity, good humor and “all social affectations and generous sentiment among people.”445

This role of education as a means of socializing children, which Adams expressed in the constitutional provision, was apparently widely held. In 1789, the Massachusetts legislature formally codified the earlier Puritan laws requiring that towns maintain schools, though technically the Puritan laws on education had remained in effect under the new constitution.446 In passing this law, the legislature specified what subjects the schools were to teach, adding a new provision on teaching morals. The 1789 law required that schools teach not only reading and writing, but also orthography and decent behavior. The teachers were to help their students understand that virtues such as piety, justice, industry and frugality would preserve and perfect the constitution, and secure the blessing of liberty.447

The Massachusetts provision on education, then, was originally adopted in 1780 and remains unchanged today. When adopted, this provision signified the importance that Massachusetts citizens attached to education simply by its existence in the state constitution.448 This importance was further underlined by the lengthy, detailed nature of the provision, which apparently contained the only place in the constitution where the people specifically assigned a “duty” to the state, and charged the legislature with an affirmative duty to act.449

This education provision was adopted at a time when schooling was relatively uniform across the state, and when state leaders exalted the value of these public schools because they provided an equal advantage to rich and poor.450 It was also adopted at a time when Massachusetts was a leader in education, both in terms of the quantity and quality of public schools, and when, following the 150

year-old Puritan tradition, Massachusetts considered school attendance so important that it, unlike many other states, required parents to send their children to school. The education provision was also adopted at a time when state leaders envisioned a universal and broad education as a means to improve society, to preserve the rights and liberties of the people, and to develop good citizens and socialize children. Finally, this provision expressed a view on the role of education that other states apparently found compelling, as the Massachusetts provision on education appears to have served as a model for the education provisions in ten other states.

---

451 Id. at 23.
452 See generally id., supra note 409, at 88–91.
453 Arkansas, California, Indiana, Maine, Missouri, North Dakota, New Hampshire, Ohio, Rhode Island and Texas all have education provisions that are similar in thought to that of Massachusetts.

In New Hampshire, the education provision reads:

Knowledge and learning, generally diffused through a community, being essential to the preservation of a free government; and spreading of the opportunities and advantages of education through the various parts of the country, being highly conducive to promote this end; it shall be the duty of the legislators and magistrates, in all future periods of this government, to cherish the interest of literature and the sciences, and all seminaries and public schools, to encourage private and public institutions, rewards, and immunities for the promotion of agriculture, arts, sciences, commerce, trades, manufactures, and natural history of the country; to countenance and inculcate the principles of humanity and general benevolence, public and private charity, industry and economy, honesty and punctuality, sincerity, sobriety, and all social affections, and generous sentiments, among the people.

N.H. Const. art. 83.

Other state provisions similar to that of Massachusetts are somewhat shorter. The Arkansas provision, for example, reads as follows: "Intelligence and virtue being the safeguards of liberty and bulwark of a free and good government, that State shall ever maintain a general, suitable, and efficient system of free public schools." Ark. Const. art. 14.

The California provision, for example, reads: "A general diffusion of knowledge and intelligence being essential to the preservation of the rights and liberties of the people, the Legislature shall encourage by all suitable means the promotion of intellectual, scientific, moral, and agricultural improvement." Cal. Const. art. IX, § 1.

The Indiana provision reads:

Knowledge and learning, generally diffused throughout a community, being essential to the preservation of a free government; it shall be the duty of the General Assembly to encourage, by all suitable means, moral, intellectual, scientific, and agricultural improvement; and to provide, by law, for a general and uniform system of Common schools.

Ind. Const. art. VIII, § 1.

Maine's constitutional provision reads:

A general diffusion of the advantages of education being essential to the preservation of the rights and liberties of the people; to promote this important object, the Legislature are authorized, and it shall be their duty to require, the
VI. THE VIABILITY OF A CONSTITUTIONAL CHALLENGE TO THE MASSACHUSETTS SYSTEM OF FINANCING SCHOOLS

Between 1968 and 1990, courts in twenty-eight states considered the constitutionality of their state school financing plans. In challenging the constitutionality of these plans, plaintiffs sought court-ordered reform because the finance system resulted in unequal funding among the state's school districts, failed to ensure an adequate guaranteed source of income to provide a basic education, or failed to fund education on the basis of the needs of children. These plaintiffs have used three different legal arguments to estab-

- several towns to make suitable provision, at their own expense, for the support and maintenance of public schools.

MAINE CONST. art. VIII, § 1.

- The Missouri provision reads: "A general diffusion of knowledge and intelligence being essential to the preservation of the rights and liberties of the people, the general assembly shall establish and maintain free public schools . . . ." Mo. Const. art. IX, § 1(a).

- The North Dakota provision reads:
  - A high degree of intelligence, patriotism, integrity and morality on the part of every voter in a government by the people being necessary in order to insure the continuance of that government and the prosperity and happiness of the people, the legislative assembly shall make provision for the establishment and maintenance of a system of public schools.

N.D. CONST. art. VIII, § 147.

- The Ohio Constitution of 1802 stated: "But religion, morality, and knowledge being essentially necessary to the good government and the happiness of mankind, schools and the means of instruction shall forever be encouraged by legislative provision, not inconsistent with the rights of conscience." OHIO CONST. art. VIII, § 3.

- The Rhode Island provision reads:
  - The diffusion of knowledge, as well as of virtue, among the people, being essential to the preservation of their rights and liberties, it shall be the duty of the general assembly to promote public schools, and to adopt all means which they may deem necessary and proper to secure to the people the advantages and opportunities of education.

R.I. CONST. art. XII, § 1.

- The Texas provision reads: "A general diffusion of knowledge being essential to the preservation of the liberties and rights of the people, it shall be the duty of the Legislature of the State to establish and make suitable provision for the support and maintenance of an efficient system of public free schools." TEX. CONST. art. VIII, § 1.

Massachusetts also served as an example for all of New England. The four Massachusetts Bay Colony laws that established free public tax-supported compulsory schools became the basis for legislation in all of the other New England colonies except Rhode Island. In 1650, for example, Connecticut adopted the Massachusetts law of 1647 almost verbatim, whereas in 1671, Plymouth Colony, which did not join Massachusetts until 1692, also adopted the Massachusetts law. In 1680, New Hampshire adopted the Massachusetts law almost unchanged; the state of Maine had identical laws as well because Maine was a part of Massachusetts until 1820. Thus, early in the colonial period most New England states, following the Massachusetts example, had firmly established the notion of state-mandated, state-supervised, and tax-supported schools. CUBBERLY, supra note 409, at 20.
lish their case for court-ordered reform: the fourteenth amendment, the state's equal protection clause, and the state constitution's provision on education. In assessing the viability of a constitutional challenge to the Massachusetts system of financing schools, the experiences of previous school finance plaintiffs in using each of these factual and legal arguments may be useful.

A. The Fourteenth Amendment Argument

The initial legal argument in school finance cases focused on unequal school expenditures among a state's school districts. This argument alleged that children from property-poor school districts were required to attend a school that provided them with a lower quality education because they lived in a poor area of the state. The fourteenth amendment was a logical basis for plaintiffs to choose to attack the legality of the state financing system that caused these funding disparities because the legal definition of equal educational opportunity had been defined, and had evolved, primarily through United States Supreme Court decisions interpreting the fourteenth amendment. In addition, by the mid-1960s, the Supreme Court had made a number of decisions that seemed to indicate that the Court would find unequal expenditures among a state's school districts unconstitutional under the fourteenth amendment because the finance law did not confer equal educational benefits on all children.454

The belief that the Supreme Court would hold unequal school expenditures unconstitutional, however, rested on the assumption that the right to a public education was "fundamental" under the Federal Constitution, and that it was illegal to provide children different educational benefits on the basis of the wealth of their school district. In Rodriguez, the Supreme Court rejected both of these assumptions, and held that education was not a fundamental right under the Federal Constitution, and that it was not illegal to provide differing benefits or impose differing burdens on people because of their wealth. A state's system of financing schools, the Supreme Court held in this 1973 decision, would be presumed constitutional unless it totally deprived a child of an education, or failed to provide children with the minimum education needed to

454 See supra notes 46-144 and accompanying text for a discussion of the evolution of the concept of equality of educational opportunity under the fourteenth amendment.
enjoy their right to free speech and to participate in the political process.\footnote{455}{See supra notes 145–201 and accompanying text for a discussion of the \textit{Rodriguez} decision.}

In the years following the \textit{Rodriguez} decision, plaintiffs in school finance cases have continued to allege that their state's system of funding schools violates the fourteenth amendment. All courts, however, that have considered this issue through 1989, have either rejected plaintiffs' attempts to distinguish their cases from \textit{Rodriguez}, or have chosen to make a ruling on some other legal ground. If Massachusetts plaintiffs raised the fourteenth amendment argument, a different answer is unlikely.\footnote{456}{See supra notes 216–44 and accompanying text for a discussion of previous cases in which courts have rejected the fourteenth amendment argument.}

In assessing the fourteenth amendment argument, for example, one finds no evidence that any child in Massachusetts is being totally deprived of an education. With regard to the issue of providing a minimum education, accreditation problems and student failure of minimum competency tests may support an assertion that the education children are receiving in some Massachusetts schools is so deficient that they are unable to participate in the political process or to exercise their right to free speech. If plaintiffs could make this case, however, the Massachusetts Supreme Judicial Court ("SJC") would likely find that such a system would violate the state's equal protection clause as well. In this situation, the SJC would probably follow the approach used by all other courts confronting fourteenth amendment arguments after \textit{Rodriguez}, and choose to decide the issue on the basis of the state constitution and avoid Supreme Court review.\footnote{457}{See, e.g., the discussion of \textit{Robinson}, supra notes 216–236.}

\textbf{B. The State Equal Protection Argument}

Following \textit{Rodriguez}, school finance plaintiffs turned out of necessity to the state constitutional arena to seek court-ordered reform. One possible argument under the state constitution was that unequal school expenditures violated the state's equal protection clause. This two-part allegation followed the pattern of the fourteenth amendment argument. Specifically, the plaintiffs would attempt to invoke the usually fatal strict scrutiny of the court by arguing that education is a fundamental right, or that differences in per pupil expenditures among a state's school districts illegally
classify children on the basis of the suspect category of wealth. The New Jersey Supreme Court in Robinson, however, expressed concern about both of these arguments, and following the 1973 decisions in Robinson and Rodriguez, state equal protection arguments based on wealth as a suspect category have been successful only in California, Arkansas and Wyoming. The fundamental rights argument has been successful since Rodriguez and Robinson only in California, Connecticut and Wyoming.\(^{458}\)

In assessing the likelihood that the SJC would declare the Massachusetts system of financing schools unconstitutional on the basis of the state's equal protection clause, it is clear that a statistical basis exists for declaring that the current financing system discriminates on the basis of the wealth of a school district. Massachusetts school districts are heavily dependent on property tax revenue, but their fiscal ability to raise funds based on property taxes varies enormously. Even if the state legislature required all towns to tax at the same rate for public school support, and devote the same amount of their municipal budget to school support, the significant difference in property values among Massachusetts towns would still result in differing amounts of money expended on education.\(^{459}\)

Although a statistical basis appears to exist to declare that the Massachusetts system of financing schools illegally discriminates against children from property-poor school districts, the SJC might wish to avoid making a decision on this basis because of the implications that this decision might have for funding other services provided by local governments. The vast majority of the courts that have considered this "wealth as a suspect category" argument under their state's equal protection clause have apparently agreed with the New Jersey Supreme Court's observation in Robinson that wealth is not at all, per se, a suspect basis for raising revenues. If the SJC can base a decision on the constitutionality of the state's financing system on any other grounds, it will likely follow the route taken by most other courts and avoid holding that it is illegal to condition a state benefit like education or welfare, or a state burden like taxation, on the basis of wealth.\(^{460}\)

\(^{459}\) See supra notes 373–408 and accompanying text for a discussion of the statistical basis for a legal challenge to the current system of financing Massachusetts schools.

\(^{460}\) See supra notes 237–91 and accompanying text for a discussion of courts which have considered wealth as a suspect category argument after Robinson.
The issue of education as a fundamental right in Massachusetts, on the other hand, presents fewer problems because of both the nature of the argument and the unique history of education in Massachusetts. In the first instance, for example, in arguing that a right is fundamental, plaintiffs are essentially trying to demonstrate that the right in question is so important and fundamental to the individual, that it should be treated specially. Under this argument, the state should not be allowed to interfere with this special right, or deliver unequal services that affect this right, unless a compelling reason exists for this interference or inequality. Thus, the fundamental rights argument does not necessarily imply that other services provided by the government are "fundamental" if the right that the plaintiffs seek to have declared fundamental can be distinguished from other state services or benefits. In addition, the fundamental rights argument will also likely present fewer problems for the SJC in the Massachusetts case, because Massachusetts has such a lengthy commitment to public education, and the emphasis on education in the constitution is so strong, that education can readily be distinguished from other services that the state has chosen to provide.461

A Massachusetts school finance case could be formulated, for example, that would bear a striking resemblance to successful fundamental rights cases in Connecticut and Wyoming. In Connecticut, the Connecticut Supreme Court based its decision to declare education a fundamental right in part on the state's lengthy commitment to public education, dating from 1650.462 The Connecticut Supreme Court also pointed to the legislature's recognition in other contexts of the importance of each child receiving an equal opportunity for access to a suitable education program. In Massachusetts, the state legislature has likewise recognized the importance of equal educational opportunity in other contexts, most notably in chapter 70, where part of the stated purpose of this state funding statute was to equalize educational opportunity.463

In Wyoming, the court pointed to the basic importance of education, as well as to its emphasis in the state constitution, in concluding that education was a fundamental right that Wyoming

461 See supra notes 409–53 and accompanying text for a discussion of the history of education in Massachusetts.
463 See supra notes 409–53 and accompanying text for a discussion of the history of education in Massachusetts.
was illegally conditioning on the wealth of a child's school district. Massachusetts parallels arise here as well, because the framers of the Massachusetts Constitution apparently intentionally emphasized education in the constitution. The education provision was apparently the only place in the constitution that the legislature was assigned an affirmative duty to act. Moreover, historians have pointed out that it was unusual at the time that Massachusetts was adopting its first constitution for state constitutions to make any provision for public education at all.

In addition, as Jefferson's experience in Virginia illustrates, the inclusion of a provision on education in the Massachusetts state constitution was not an automatic gesture that was taken for granted. In light of evidence that some opposition to the continued public support of schools in Massachusetts arose in the western districts, the inclusion of an education provision in the state constitution is of added importance. Thus, ample reason exists for Massachusetts courts to consider education a fundamental right, and the current financing system unconstitutional, because the system does not distribute the benefits of education equally among all children.

C. The State Education Provision Argument

The third legal argument that plaintiffs have used to challenge the constitutionality of their state's funding plan has been to allege that the financing system violates the education provision in the state constitution. This fact-specific argument was successful in the New Jersey, Washington, West Virginia, Kentucky, Montana and Texas cases, and in fact has been the only successful argument in the past seven years. Courts in these cases generally sought to define the meaning of their respective provisions by examining the plain meaning of the words, the context in which the provision was passed, and the intent of the framers. These courts then assessed whether factors such as unequal per pupil expenditures, lack of guaranteed funding, and failure to apportion funds based on the

465 See supra notes 409–53 and accompanying text for a discussion of the history of education in Massachusetts.
needs of children, violated their state constitution's education provision.\footnote{466 See supra notes 252-75 and accompanying text for a discussion of the state education provision argument in other states.}

In the case of Massachusetts, the current system of financing schools results in substantial disparities in funding among the state's school districts. The state legislature has already implicitly recognized through chapter 70 that these funding disparities affect a child's opportunity and ability to learn. The current system of financing schools in Massachusetts also apparently leaves some school districts, and the children they serve, without adequate and guaranteed funding to meet even minimum accreditation standards. In addition, this system seems to penalize many children who have high educational needs by funding their education at a lower level than that of children in more affluent areas of the state. Unless one assumes that a $60,000 difference in funds expended on a single classroom makes no difference at all, one must conclude that in Massachusetts the state is forcing children from property-poor school districts to attend state-mandated public schools that are inferior to those maintained in wealthier school districts. In doing so, the state is arguably affecting their ability to achieve not only in school, but in society as well.\footnote{467 See supra notes 373-408 and accompanying text for a discussion of the effect of unequal funding in Massachusetts.}

When one compares the results of this financing system with the Massachusetts state provision on education, it is difficult not to conclude that the current financing system violates this provision and is thus unconstitutional. The plain meaning of the Massachusetts education provision, the intent of author John Adams, the contemporary views of other state leaders, and the type of schooling that existed when the education provision was passed in 1780, all seem to indicate that the people of Massachusetts in ratifying this provision intended to provide equal educational opportunity to all children. Clearly, the current system of financing schools could not be characterized, as John Hancock described Massachusetts schools in the late 1700s, as providing "equal advantages to rich and poor."\footnote{468 See supra notes 435-39 for a discussion of John Adams view of public education at the time the constitution was written.} The current financing system also seems incongruent with the constitution's emphasis on virtue, or sacrificing for the public good, and it is doubtful if the current educational system is diffusing
knowledge to all children in the manner anticipated by the framers of the constitution.

In addition to these factors, the current system of financing schools seems ill-prepared to serve the broad vital role for education outlined in the constitution. A financing system in which school districts have no guaranteed source of funds adequate to meet even minimum accreditation standards is not likely to preserve liberties, promote knowledge or inculcate social and moral values. Moreover, in placing the duty to cherish and monitor education with the state, it is unlikely that the framers of this provision intended to allow voters within a school district the option to fund their schools inadequately. Indeed, the entire tradition of education in Massachusetts prior to the adoption of the state constitution, as well as education as it existed when the constitution was adopted, points to an intent that the state ensure that towns maintain schools that are sufficiently funded to meet the educational goals stated in the constitution. In writing this education provision, John Adams could not have intended to promote a system of education that discriminated against children in poor areas of the state, provided an inferior education to those children with the greatest educational needs, and allowed local voters to choose to provide a less than adequate education for children living in their town.469

Thus, the SJC could hold that the current system of financing public schools in Massachusetts is unconstitutional on two potential bases. Both the lengthy commitment to public education in Massachusetts, and the emphasis on education in the state constitution, seem to provide ample reason for the SJC to elevate education to the status of a fundamental right. Such a designation would place the burden on the state to demonstrate why it should be allowed to condition the quality of a child's education on the wealth of his or her school district. Assuming that the state of Massachusetts invokes the "local control argument" used in other school finance cases, the SJC would likely hold that the state could meet the goal of local control of schools in other ways, and thus declare the Massachusetts system of financing schools unconstitutional.470

An alternate basis on which the SJC could declare the current system of financing schools unconstitutional would appear to be the

469 See supra notes 409–53 and accompanying text for a discussion of the history of education in Massachusetts.

470 See supra notes 409–53 and accompanying text for a discussion of the history of education in Massachusetts.
state's education provision. The current system of financing schools does not provide equality of educational opportunity for Massachusetts schoolchildren, which seems to have been the intent of the people of Massachusetts in ratifying this provision. The current financing system also provides an inferior education to some of the state's neediest children, which would seem to be inconsistent with the attainment of the broad societal goals that the Massachusetts education provision envisions. The current school system arguably does not diffuse knowledge in the manner the framers intended, given the broad role the framers envisioned for education. Finally, the current system of financing schools leaves local voters free to provide inadequate funding for public schools, a situation that clearly seems to contradict the very reason that the people of Massachusetts assigned the duty to cherish the schools to the state, and not to towns. 471

VII. Conclusion

The legal fight to achieve equality of educational opportunity for all children has spanned nearly a century, and has involved differing interpretations of this concept. One focus of the movement to achieve equality of educational opportunity has been to reduce the significant funding disparities that exist among a state's school districts when states choose to fund their schools partially through local property tax revenue. Those who believe that differences in the amount of money spent per child on education affect the quality of education the child receives have sought court-ordered reform of the funding plans which led to these differences.

Since 1968, when the first school finance case was decided, courts have considered the constitutionality of the state financing systems of twenty-eight states. School finance reform plaintiffs have argued that unequal funding among a state's school districts was unconstitutional on the basis of the fourteenth amendment, the state equal protection clause and the state education provision. Prior to 1989, however, the school finance reform movement was only moderately successful, and interest in court-ordered school reform seemed to be declining. Then, in 1989, within weeks of each other, courts in three states declared their respective state financing plans unconstitutional on the basis of their state education provision. In

471 See supra notes 409-53 and accompanying text for a discussion of the history of education in Massachusetts.
the following year, another court declared its system of financing schools unconstitutional because it failed to meet the needs of disadvantaged children in certain court-identified urban school districts, and failed to provide adequate guaranteed funds for programs in these districts. By 1991, there was evidence of a revived interest in court-ordered school finance reform.

Massachusetts is one of twenty-two states in which courts have not yet ruled on the constitutionality of the state's system of financing schools. Statistically, the current system seems vulnerable to a constitutional challenge because there is a substantial difference in per pupil expenditures among the state's school districts, arguably a lack of sufficient guaranteed funding to ensure a minimum education for all children, and a failure to apportion funds based on the educational needs of children. Legally, it seems likely that plaintiffs could make a strong case that the current system of financing schools in Massachusetts violates the state's equal protection clause, as well as the state's constitutional provision on education. If Massachusetts is confronted with a legal challenge to the constitutionality of its system of financing schools, an ample statistical and constitutional basis exists for the Supreme Judicial Court to declare the Massachusetts system of financing schools unconstitutional.
