A Critique of the Motivational Analysis in Wrongful Conception Cases

Iraida J. Alvarez
A CRITIQUE OF THE MOTIVATIONAL ANALYSIS IN WRONGFUL CONCEPTION CASES

Abstract: Most states now recognize a tort cause of action for wrongful conception, typically resulting from a failed sterilization. States differ; however, in determining whether damages should be awarded for child-rearing expenses and what factors juries can consider in setting such damage awards. This Note argues that one commonly used factor, the parents' motivation for selecting sterilization, is irrelevant and leads to inequitable results. Since the right to use contraception is constitutionally protected, the choice to sterilize in order to avoid financial burdens associated with child-rearing should not be given preferential treatment to sterilizations motivated by concerns of genetic defects or for the mother's health.

INTRODUCTION

On April 1, 1967 a picture of a mother and a child appeared in the San Francisco Chronicle with the following description:

When Kathleen Halloway had her tenth child two years ago, a family consultant advised her to have no more children since her husband made $40 a week as a London bone and rag picker. The consultant thought the Pill wasn't enough, so on his recommendation Mrs. Halloway had a sterilizing operation. Apparently that wasn't enough either. She gave birth to a 9-pound 3-ounce girl at St. Mary's Hospital. The doctors are still trying to figure out what happened.¹

Situations like the one just described are typical in wrongful conception cases.² Although the birth of a child after a sterilization procedure is not necessarily a result of the physician's negligence, there are many instances where the doctor has been negligent in performing the procedure by not performing the operation properly, not providing post-operative care or failing to notify the patient of the risks involved.³ This Note focuses on those cases where a doctor negligently

² See id.
³ See Amy Norwood Moore, Note, Judicial Limitations on Damages Recoverable for the Wrongful Birth of a Healthy Infant, 68 Va. L. Rev. 1311, 1313, 1329-30 (1982); Lisa A. Po-
performs a sterilization procedure resulting in the birth of a child. These cases generally fall under what has come to be known as a cause of action for wrongful conception or wrongful pregnancy.  

Today, pre-natal torts and birth-related causes of action have become more accepted by courts and legislatures nationwide. There is still controversy, however, as to the kinds of damages that are recoverable. In wrongful conception cases, courts attempt to balance plaintiffs' injuries with public policy concerns involving the valuation of infant's lives. In balancing these interests, courts have used different rules and sometimes have deviated from traditional tort law principles. This Note explores the various approaches used by courts in awarding child-rearing damages. The majority of courts have not allowed full recovery for child-rearing damages. Some courts have devised various tools to limit the damages recoverable and thus, prevent recovery for child-rearing expenses. This Note seeks to demonstrate that one of those tools, the motivational analysis, does not produce the best results in wrongful conception cases.

---

4 There is no universal distinction between the terms wrongful birth, wrongful life, wrongful conception and wrongful pregnancy. See Jill E. Garfinkle, Note, Burke v. Rivo: Toward a More Rational Approach to Wrongful Pregnancy, 36 VILL. L. REV. 805, 807 (1991). Wrongful birth is usually a suit brought by the parents of a defective child against a physician for failure to diagnose problems with the fetus and the parents claim that due to the physician's negligence they were deprived from exercising their right to choose whether to abort or keep the fetus. See Russell G. Donaldson, Annotation, Recoverability of Cost of Raising a Normal, Healthy Child Born as Result of Physician's Negligence or Breach of Contract or Warranty, 89 A.L.R. 4th 632, § 1(a) (1991). Wrongful life is an action brought by the parents on behalf of a defective child where they seek damages for the impaired life the child now has to live as a result of the physician's negligence. See id. Wrongful pregnancy or wrongful conception is an action brought by the parents of a normal and healthy but unplanned child in order to recover damages from a physician for allegedly causing a conception or pregnancy to occur when the couple had sought the doctor's assistance to avoid such occurrence. See Garfinkle, supra at 808. Some courts and treatises, however, use all of these terms interchangeably and usually use the term wrongful birth as all-encompassing. See id. at 807.

Part I of this Note provides an overview of the development of
the cause of action for wrongful conception and discusses the four
major approaches used in awarding damages in these cases. Part II
discusses endorsements and criticisms of the offset benefits rule used
by some courts to calculate damages for child-rearing expenses in
wrongful conception cases. Part III discusses the different applica-
tions of the motivational analysis in offset benefits jurisdictions. Fi-
nally, Part IV analyzes the use of a motivational inquiry in wrongful
conception cases and questions whether it produces the best results.

I. OVERVIEW OF THE CAUSE OF ACTION FOR WRONGFUL CONCEPTION

Wrongful conception is an action brought by the parents of a
normal, healthy but unplanned child in order to recover damages
from a physician for allegedly causing a conception or pregnancy
when the couple had sought the physician’s assistance in avoiding
such occurrence. Wrongful conception claims are generally in-
cluded as part of an action for medical malpractice. The first suits
for negligent performance of a sterilization procedure where a
healthy child was born were based on claims for misrepresentation,
 fraud and deceit. Today, claims range from breach of contract and
breach of fiduciary duties to negligence. The vast majority of cases
involve the negligent performance of sterilization procedures such as
tubal ligations or vasectomies. There also have been cases dealing
with the liability of a pharmacist for negligently filling a prescription
for birth control pills.

The development of the cause of action for wrongful conception
was hindered because, historically, contraception, sterilization and
abortion were not recognized as legal options in many jurisdictions.\(^23\) Furthermore, courts reasoned that public policy considerations would preclude recovery for the birth of a child, particularly if the child was born healthy.\(^24\) According to these courts, the birth of a healthy child was a blessing and not a cognizable injury.\(^25\)

In 1973, in *Roe v. Wade*, the United States Supreme Court held that a woman’s right to family planning was a constitutional right.\(^26\) Along with *Wade*, other important United States Supreme Court decisions recognized contraception, sterilization and abortion as constitutional rights.\(^27\) Those cases provided the impetus for the acceptance of wrongful conception, wrongful birth and other similar causes of action which have developed over the last thirty years.\(^28\)

**A. Chronological Development of Wrongful Conception Claims**

*Christensen v. Thornby* was the first reported case to deal with an action based on a failed sterilization procedure which resulted in the birth of a healthy child.\(^29\) In 1934, in *Christensen*, the Supreme Court of Minnesota held that the performance of a sterilization procedure and a contract to perform such a procedure are not against public policy, at least, when medical necessity is involved.\(^30\) The court, however, dismissed the plaintiff’s claims because they were based on a theory of deceit and there was no showing by the plaintiffs of a fraudulent intent to deceive.\(^31\) In *Christensen*, the husband underwent a vasectomy because he was advised that it would be dangerous for his wife to bear another child.\(^32\) The defendant, a doctor, performed the

\(^32\) See id. at 621.
operation and guaranteed sterility. Subsequently, the wife became pregnant and delivered a healthy baby without major complications to her health. The husband grounded his suit solely in deceit because he claimed that the doctor fraudulently represented to him that the operation was successful and that it would prevent conception. The husband made no claims as to whether the doctor negligently performed the operation. The Christensen court reasoned that the husband did not have a cause of action for deceit because he did not show the requisite element of fraudulent intent. According to the court, there was no fraudulent intent because the operation was performed and its purpose was fulfilled—to save the wife from hazards incident to childbirth. Moreover, the court viewed the birth of a healthy child as a blessing and not as an injury.

The Christensen court, however, implied that the plaintiff may have been successful on claims for breach of contract or medical malpractice if the plaintiff had sued on those theories. To the court, a contract to perform the sterilization procedure was not void as against public policy because there was no statutory provision in the state of Minnesota prohibiting sterilization. The Christensen court further reasoned that even if there was such a prohibition, an exception is made by most other states when medical necessity requires the operation. In Christensen, the husband’s motivation for submitting to a vasectomy was to protect his wife from another pregnancy which would have been detrimental to her health. Thus, the court held that in this case, the operation and the contract to perform the sterilization were not void as against public policy.

The court in Christensen only dealt with a claim of deceit; the first reported case to use a negligence approach in a failed sterilization case where a healthy child was born was Ball v. Mudge. In 1964, in

46 See 391 P.2d 201 (Wash. 1964). West v. Underwood was the first reported negligence case dealing with a failed sterilization. See 40 A.2d 610 (N.J. 1945). In West, however, the
Ball, the Washington Supreme Court held that a doctor's negligence in performing a vasectomy was not the proximate cause of the pregnancy of the plaintiff's wife. The husband had a vasectomy because his wife was advised by an obstetrician that further deliveries would be dangerous to her health after already delivering three children by Cesarean section. In addition, the husband and his wife were unable to afford the expense of raising another child. The husband submitted to a vasectomy and resumed relations with his wife. The doctor did not advise the husband to undergo post-operative testing for fertility nor did he provide any type of post-operative care. The wife became pregnant and delivered a healthy child, again by Cesarean section, without any major complications to her health. The husband and his wife sued the doctor in negligence, claiming that the doctor failed to successfully sterilize the husband and departed from standard medical practice by not providing post-operative care. The husband sought recovery for the expenses associated with the delivery, care, maintenance and support of the child as well as the pain and suffering of the parents.

The Ball court, in denying the negligence claim, reasoned that the doctor's actions were not the proximate cause of the pregnancy because it was medically possible for the husband to become fertile after a vasectomy. Therefore, the wife's pregnancy did not necessarily mean that the doctor was negligent in performing the vasectomy. Although the doctor did not provide post-operative care to the plaintiff, the court nevertheless reasoned that the doctor had not departed from the usual standard of care in the community. Moreover, it was reasonable for the jury to conclude that plaintiffs suffered no damage from the birth of a healthy child because they loved the child dearly.

consequences of the failed procedure were abscesses over the incision and deep pain, not the birth of a child. See id. Therefore, the discussion of that case is omitted in this Note.

and would not consider placing the child for adoption nor "selling it for $50,000."\footnote{57}

It was not long before other jurisdictions started using the negligence approach.\footnote{58} In 1967, the California Court of Appeals, in \textit{Custodio v. Bauer}, was the first court to hold in a suit for wrongful conception in negligence that a physician's actions was the proximate cause of childbirth and that child-rearing damages was compensable even if a healthy child is born.\footnote{59} In \textit{Custodio}, a husband and a wife, sought recovery from their doctors on seven different causes of action having to do with the negligent performance of a sterilization procedure where the wife's fallopian tubes were to be partially removed.\footnote{60} The husband and his wife wanted to undergo this treatment because they were told that another pregnancy, after having nine children, would aggravate the wife's bladder and kidney conditions.\footnote{61} Almost a year after the surgery, the husband discovered that his wife was pregnant despite the doctors' assurances of a successful operation.\footnote{62} The wife gave birth to a healthy baby and sought monetary damages for the costs of delivery, emotional distress and child-rearing expenses for the care of the child until the age of majority.\footnote{63}

The \textit{Custodio} court recognized the doctor's actions as the proximate cause of the pregnancy and stated "it is difficult to conceive how the very act the consequences of which the operation was designed to forestall, can be considered unforeseeable."\footnote{64} In addition, the court reasoned that public policy did not prevent the recognition of a cause of action for failed sterilization because the United States Supreme Court had recognized a constitutional right in the use of contraception and sterilization.\footnote{65} According to the \textit{Custodio} court, damages for the delivery were compensable because the birth of the child was an obvious foreseeable consequence of the doctor's negligence and sterilization procedures were no longer illegal or against public policy.\footnote{66} The court also implied that the husband and wife could recover for

\footnotesize{\textsuperscript{57} Id. \\

the mental and physical complications the operation was designed to prevent. \(^{67}\) Furthermore, the court reasoned that child-rearing expenses could be compensable because the family suffered a loss by the birth of the child; this was a foreseeable consequence of the doctor's negligence. \(^{68}\) The Custodio court, however, made clear that the damages were not for the "unwanted" child but to "replenish the family exchequer so that the new arrival would not deprive other members of the family of what was planned as their just share of the family income." \(^{69}\) According to the court, this is not against public policy because there is a trend in social ethics towards contraception and family planning as a means of ensuring the "economic betterment of . . . the population." \(^{70}\)

In sum, plaintiffs seeking compensation for negligently performed sterilization procedures have used various theories in order to persuade courts to accept a cause of action for wrongful conception. \(^{71}\) At first, it was impossible to achieve recovery because sterilization was illegal in many jurisdictions. \(^{72}\) Therefore, efforts by plaintiffs concentrated on using theories having to do with deceit and misrepresentation, claiming that the doctors guaranteed sterility after the operations. \(^{73}\) By 1934, however, one court recognized that breach of contract claims could be recognized if the sterilization was performed to protect the mother's health; this practice did not become widespread since many states still did not recognize sterilization procedures or contracts to perform them as legal. \(^{74}\) More importantly, however, the most probable reason for the sporadic use of a breach of contract claim had to do with the fact that doctors were usually careful not to guarantee a result in their written or oral contracts. \(^{75}\) Even a few years before sterilization and contraception were recognized as legal rights under the United States Constitution by the United States Supreme Court in 1965, there were failed attempts by plaintiffs to

\(^{67}\) See id. at 476. The court implied that the husband and wife could not recover because at the time of the lawsuit the wife had not given birth to the child. See id. at 467 n.3. Thus, the plaintiffs could not prove mental and physical complications at the time of the suit. See id.

ground their claims in negligence. Those negligence claims were not successful until after the *Custodio* decision in 1967. Undoubtedly, Supreme Court decisions dealing with reproductive rights have been the main impetus towards the acceptance of the cause of action of wrongful conception; these decisions stand for the precept that injuries to those constitutional rights are legally compensable.

B. *Four Different Approaches to Damages*

Today, wrongful conception is a widely accepted cause of action. Much controversy, however, arises from the various methods used to calculate damages. Compensation for child-rearing expenses for the birth of a healthy child is the most controversial aspect of damage awards. In fact, most courts today still refuse to award damages for the full cost of these child-rearing expenses. The compensation theories used by courts can be grouped into four categories: (1) total denial of recovery; (2) limited recovery; (3) full recovery; and (4) offset benefits.

1. Total Denial of Recovery

Until twenty years ago, when the incidence of pre-natal torts increased, the total denial of recovery approach was the predominant approach used by courts in wrongful conception actions. Currently, only two jurisdictions, Kansas and Nevada, still adhere to this approach, neither recognizing the tort nor awarding damages in wrongful conception claims. The supreme courts of these two states rely on the old common law rationale used to deny this cause of action—

that the birth of a healthy child is not a harm.\textsuperscript{87} Therefore, as a matter of public policy, these courts rule that there is no cause of action for wrongful conception.\textsuperscript{88}

For example, in 1986, the Nevada Supreme Court, in \textit{Szekeres v. Robinson}, declined to award any damages for wrongful conception, and held that such cases were not to be analyzed under a negligence scheme.\textsuperscript{89} The \textit{Szekeres} court found that even if the doctor's negligent or careless conduct contributed to the birth of a child, it would not rise to a tort liability in negligence because the birth of a healthy baby was not a legally compensable damage.\textsuperscript{90} Nevertheless, the court stated that its denial of tort liability did not mean that plaintiffs could not recover under a breach of contract claim.\textsuperscript{91} According to the court, the damages in a breach of contract claim would be limited to the cost of medical, surgical and hospital care associated with the failed surgery.\textsuperscript{92}

In \textit{Szekeres}, a woman who underwent surgical sterilization became pregnant and delivered a healthy baby girl.\textsuperscript{93} She sued her attending physicians and the hospital where the surgery was performed on the theory that she, the newborn and the newborn's siblings had been damaged by the baby's birth.\textsuperscript{94} The newborn's father claimed that he was damaged by the wife's unavailability during the pregnancy.\textsuperscript{95} The court, in denying the existence of a cause of action for wrongful conception in negligence, reasoned that the wrongness or the injuriousness of the birth should not be taken for granted because the birth of a healthy child is not a wrong but a "right."\textsuperscript{96} For the \textit{Szekeres} court, the birth of a healthy child distinguishes a claim of wrongful conception from ordinary medical negligence actions.\textsuperscript{97} The court explained that in medical malpractice actions, the results of the doctor's negligence are injuries such as death or disabilities.\textsuperscript{98} In wrongful conception

\end{itemize}
cases, on the other hand, the court explained that the alleged wrong is not an injury for which society should give reparation.99

2. Limited Recovery

The second approach to damages in wrongful conception cases is the limited recovery view.100 This approach is the one espoused by a majority of jurisdictions in the United States.101 The courts using this method allow damages for harm that is the direct result of the physician's negligence but preclude recovery for child-rearing expenses.102 According to these courts, a parent should not be awarded the costs of child rearing because such damages are too speculative.103 These courts also reason that: (1) the benefits of a healthy child outweigh any economic loss; (2) child rearing expenses are disproportionate to the doctor's culpability; and (3) there are devastating psychological effects when a child later finds out he or she was unwanted and that someone else is paying to rear him.104 In declining to award child-rearing expenses, these courts also are concerned with the possible increase in fraudulent claims and the difficulty in drawing a line to stop the physician's liability.105

In 1989, the Supreme Court of Ohio, in Johnson v. University Hospitals, held that the limited recovery theory was the most appropriate in a wrongful conception action.106 In Johnson, a woman had undergone a tubal ligation which was negligently performed by three doctors.107 She later became pregnant and realized that she had not been sterilized.108 As a result, she delivered a healthy child and sued her doctors for pain and suffering related to the pregnancy, birth, personal injury and child-rearing expenses.109

The Johnson court, after exploring the approaches used by other states, did not find it persuasive to award child-rearing expenses because such costs are too speculative and it would be almost impossible

99 See id.
101 See Johnson, 540 N.E.2d at 1375.
102 See Schork, 648 S.W.2d at 862-63; Johnson, 540 N.E.2d at 1378.

108 See id. at 1370-71.
109 See id. at 1371.
for a jury to place a price tag on the life of a child. Furthermore, the court reasoned that Ohio's public policy dictated that the birth of a healthy child can not be an injury to its parents. The court reasoned that only the Ohio legislature, by balancing competing social philosophies, could decide whether child-rearing expenses could be recognizable damages. The Johnson court, however, stated that other damages such as medical expenses, loss of consortium, emotional distress, loss of wages, and pain and suffering are appropriate. According to the court, such damages should be allowed because in a negligence analysis the doctor owed a duty to the patient and such duty was breached.

3. Full Recovery

The third approach to awarding damages in wrongful conception cases is full recovery. The jurisdictions applying this view allow recovery for all damages that are incident to the pregnancy including child-rearing expenses. Some of these courts have reasoned that it would not be speculative to award these costs because juries are accustomed to calculating these costs in other types of tort actions. According to these courts, public policy considerations do not preclude the recovery of child-rearing and education expenses because even the birth of a healthy child imposes certain costs on parents—costs they had sought to avoid. Furthermore, some courts have stated that public policy compels recovery of child-rearing damages in order to protect the right to family planning.

In 1990, for example, the Supreme Court of Wisconsin, in Marciniak v. Lundborg, held that the parents of a healthy child may recover damages, including child-rearing expenses, from a physician who negligently performed a sterilization procedure. The court found that these costs should not be offset by the benefits conferred upon the

120 Marciniak, 450 N.W.2d at 245.
parents by the presence of a healthy child in their lives.\footnote{121} In \textit{Marciniak}, a woman sought a sterilization procedure to avoid having more children.\footnote{122} At the time, she already had two young children and was working twenty-five hours a week.\footnote{123} She underwent a laparascopy with bilateral fallopian tube cautery and was under the impression that this procedure would result in permanent sterilization.\footnote{124} Despite the surgery, she became pregnant and delivered a child.\footnote{125}

In finding the physician negligent, the \textit{Marciniak} court explained that no public policy considerations prevented the recognition of liability.\footnote{126} The court stated that traditional principles of tort liability should apply and a wrongdoer must compensate those who are injured by his or her negligence.\footnote{127} According to the court, child-rearing costs are not speculative because similar types of costs are awarded in numerous other types of cases such as wrongful death cases.\footnote{128} Moreover, these damages are not out of proportion to the doctor’s culpability because they are foreseeable.\footnote{129} Additionally, public policy does not immunize defendants from liability merely because the damages are substantial.\footnote{130} The court also reasoned that awarding child-rearing damages to the parents would not psychologically damage the child, but rather it would alleviate the family’s economic burdens and add to the well-being of the child.\footnote{131} Finally, the \textit{Marciniak} court reasoned that it would not be equitable to force upon the parents the costs of raising a child when they sought precisely to avoid those costs.\footnote{132} The court, therefore, found that the costs of raising a child until the age of majority may not be offset by the benefit of having a healthy child in their lives since such benefit was not sought.\footnote{133}
4. The Offset Benefits View

The fourth approach to damages in wrongful conception cases is referred to as the offset benefits view.\(^{154}\) Courts using this method reject the view that, as a matter of law, child-rearing expenses are not recoverable.\(^{155}\) These courts, however, do not go as far as full recovery because they hold that the child-rearing damages should be offset by the benefit the parents receive from having a healthy child.\(^{156}\) These courts draw this principle from Section 920 of the *Restatement (Second) of Torts* which states that when a defendant's tortious act causes harm to the plaintiff but also confers a benefit, such benefit should be considered in mitigation of damages to the extent it is equitable.\(^{157}\) Jurisdictions using this approach allow the jury to decide when child-rearing costs exceed the benefits, and allow plaintiffs to recover the difference between the costs and the benefit.\(^{158}\) Some courts have refined this process and take into account the plaintiff's motivation for seeking the sterilization procedure.\(^{159}\) Those courts which take the parents' motivation into account are more likely to allow recovery for the costs of child-rearing if the primary motivation was financial.\(^{160}\) If the parents seek sterilization, however, for eugenic reasons (e.g. avoidance of a genetic defect), or out of concern for the mother's health, then recovery for these costs is less justified.\(^{161}\)

In 1983, the Supreme Court of Arizona, in *University of Arizona Health Sciences Center v. Superior Court*, adopted the offset benefits view and held that the benefits of an unplanned but healthy child may be weighed against any pecuniary and non-pecuniary damages in determining plaintiffs' recovery in a wrongful conception case.\(^{162}\) The *University of Arizona* court found that a health care provider operating a teaching hospital could be liable for negligently performing a vasectomy.\(^{163}\) The plaintiffs were a husband and wife, who after having three children, decided not to have any more children.\(^{164}\) The hus-

band and wife decided that a vasectomy was the best means of contraception for them. After the husband underwent the vasectomy operation, the wife became pregnant and delivered a healthy child. Subsequently, the husband and wife sued the doctor and his employer, the teaching hospital, seeking damages including child-rearing expenses.

The University of Arizona court, after discussing the approaches taken by courts throughout the country, reasoned that child-rearing damages are compensable but should be offset by the benefits of the parent-child relationship. The court recognized that the birth of a healthy child is not always a benefit, depending on the reasons behind the parents' decision not to have another child. Although in some cases a family can adjust to the birth of a child they were not expecting, in other cases the birth of an unplanned child can cause serious emotional and economic problems to the parents. Further, contrary to what other courts claim, child-rearing damages are not speculative because such calculations are routinely performed in other types of cases.

The court reasoned that the costs of child-rearing should be offset by the pecuniary and non-pecuniary benefits conferred on the parents according to the particular circumstances of the case. For example, the court suggested that factors such as family size, family income, age of the parents and marital status be taken into account when calculating the benefit to the parents. According to the court, the offset benefits approach allows the jury certain flexibility in determining which persons have suffered more or gained more as a result of the birth of a healthy child. The court reasoned that the jury represents a cross-section of the community and as such can better reach a consensus as to whether damages are warranted in the case before them.

The court explained that if compensation for child-rearing damages were based on an "iron-clad" rule, judges would im-

pose their personal views on morality by deciding cases based on personal emotion.\(^\text{156}\) The court also reasoned that denying compensation for child-rearing expenses would deviate from one of the basic principles of tort law—that a wrongdoer is held liable for all damages which he caused and all costs which the victim sustains as a result of the wrong.\(^\text{157}\) Therefore, the court determined that this case-by-case adjudication in determining child-rearing damages, despite its inevitable variations, provides the most accurate method in computing damages in wrongful conception cases.\(^\text{158}\)

II. ENDORSEMENT AND CRITICISMS OF THE OFFSET BENEFITS VIEW

A. Endorsements of Offset Benefits View

The offset benefits view presents the most problematic application of all damage rules used by courts in wrongful conception cases.\(^\text{159}\) Some commentators have regarded the offset benefits approach to wrongful conception damages as a sensible or enlightened solution.\(^\text{160}\) Other commentators consider it merely as a step in the right direction.\(^\text{161}\) The debate, however, has centered on criticizing the approach as a whole or on criticizing specific cases applying the offsets benefits view.\(^\text{162}\) This Note seeks to show that despite all of the shortcomings discussed in the current literature, the most critical flaw of the application of the offset benefits rule to wrongful conception cases is the use of the motivational analysis. This section will review the current debate surrounding the application of the offset benefits rule in wrongful conception cases.

\(^\text{156}\) See id. at 1298, 1300.
\(^\text{157}\) See id. at 1300.
\(^\text{158}\) See University of Ariz. Health Sciences Ctr., 667 P.2d. at 1301.
\(^\text{159}\) See Podewils, supra note 3, at 419-20, 421.
\(^\text{161}\) See O'Shea, supra note 80, at 988-89 (suggesting that a more equitable approach within this framework would be to focus on the reasons for the parents' reliance on the surgical procedure); Garfinkle, supra note 4, at 828 (arguing that the offset benefits approach is a step in the right direction but that the court should have allowed full recovery).
\(^\text{162}\) But see Jeff L. Milsteen, Comment, Recovery of Childrearing Expenses in Wrongful Birth Cases: A Motivational Analysis, 32 EMORY L.J. 1167 (1983). Although the Milsteen article is the only journal article dealing exclusively with the motivational framework, it generally deals with wrongful birth actions and not specifically with wrongful conception actions. See id.
The jurisdictions that have adopted the offset benefits rule view it as a course of greater justice, at least, when compared to the alternative of denying all recovery. These courts find that the policy reasons typically advanced to prevent the recovery of child-rearing expenses do not always outweigh the injury suffered by the parents. According to these courts, the offset benefits approach allows the fact-finder to weigh all of the circumstances in each case before coming up with a damages award. Only in that way, can the result in each case be the most accurate and efficient in promoting the goals of tort law.

Jurisdictions following the offset benefits rule recognize that there are situations where parents, despite the benefits they might receive from the birth of a child, are simply unable to provide for another child, either financially or emotionally or both. Thus, an injury requiring compensation has indeed occurred as a result of the physician's negligence. These courts do not find the recognition of the existence of an injury as inconsistent with public policy because

164 See Ochs v. Borrelli, 445 A.2d 883, 885 (Conn. 1982); Troppi v. Scarf, 187 N.W.2d 511, 518 (Mich. Ct. App. 1971). The Troppi court describes a situation where an unwed college student becomes pregnant due to a pharmacist’s failure to properly fill her prescription for birth control pills. See id. at 518. According to the court, she will suffer far greater damage than the young newlywed who was only using contraceptives temporarily while she and her husband were taking an extended honeymoon trip. See id. at 518-19.
165 See Troppi, 187 N.W.2d at 518. In 1992, another panel of the Michigan Court of Appeals in deciding a wrongful conception case declined to follow the “benefits rule” set out in Troppi. See Rouse v. Wesley, 494 N.W.2d 7, 11-12 (Mich. Ct. App. 1992). In Rouse, the Michigan Court of Appeals stated that the portion of the holding in Troppi relying on the benefits rule was undermined, yet the court did not overrule Troppi. See id. at 12 n.3. In 1999, another panel of the Michigan Court of Appeals abolished the tort of wrongful birth until the Michigan Supreme Court or the Michigan legislature provided further guidance. See Taylor v. Kurapati, 600 N.W.2d 670, 691 (Mich. Ct. App. 1999). The Michigan Court of Appeals, in Taylor, criticized the benefits rule not only in wrongful birth cases but in wrongful conception cases. See id. at 678-681. The Taylor court was very critical of Troppi’s benefits rule and explicitly overruled the application of Troppi in wrongful birth cases. See id. at 688-91. As to wrongful conception cases, the Taylor court assumed claims would be limited by Rouse until the Supreme Court of Michigan or the legislature provides further guidance. See id. at 681 n.35. The Taylor court did not address to what extent wrongful conception claims remain tenable in Michigan because the case before them was a wrongful birth case. See id.
166 See University of Arizona Health Sciences Ctr. v. Superior Court, 667 P.2d 1294, 1301 (Ariz. 1983); Jones, 473 A.2d at 438; Burke v. Rivo, 551 N.E.2d 1, 6 (Mass. 1990).
167 See University of Ariz. Health Sciences Ctr., 667 P.2d at 1298; Jones, 473 A.2d at 435-36; Burke, 551 N.E.2d at 4.
168 See Jones, 473 A.2d at 435-36.
"parental pleasures do not eradicate the economic reality."\(^{169}\) More importantly, as is sometimes suggested by other jurisdictions, these courts do not consider the child as the injury.\(^{170}\) Instead, similar to jurisdictions allowing full recovery, these courts are willing to award child-rearing expenses because they consider the cost of raising a child as the direct and foreseeable consequence of a physician's negligence.\(^{171}\) Since tort law principles dictate that a wrongdoer must be held liable for all damages caused as a result of his or her wrong, it would be against legal principles and public policy to let parents go uncompensated for their injury.\(^{172}\)

The offset benefits view, however, differs from the full recovery view in that the recovery of such foreseeable and direct damages can be offset by the pecuniary and non-pecuniary benefits conferred on the parents by the birth of a healthy child.\(^{173}\) These jurisdictions find the offset benefits rule desirable because it allows more flexibility by tailoring the damages award to the circumstances of each case rather than subscribing to a strict recovery rule for all cases.\(^{174}\) To these courts, this flexibility is important in providing a more accurate assessment of the damages in each case.\(^{175}\) Moreover, these jurisdictions consider it unfair and dangerous to provide full compensation in all cases for the birth of a healthy baby because the benefits and injuries to the parents vary with the circumstances.\(^{176}\)

\(^{169}\) Ochs, 445 A.2d at 885.

\(^{170}\) See Lovelace Med. Ctr. v. Mendez, 805 P.2d 603, 609-11 (N.M. 1991). The court in Lovelace applied the offset benefits rule to the emotional distress claim and not to the child-rearing expenses claim. See id. at 613-14.

\(^{171}\) See Jones, 473 A.2d at 435; Burke, 551 N.E.2d at 4.

\(^{172}\) See University of Ariz. Health Sciences Ctr., 667 P.2d at 1300; Ochs, 445 A.2d at 885 (noting that to limit recovery for child-rearing expenses would be tantamount to carving out an exception to traditional tort principles based on public policy and such policy reasons cannot support such an exception because it would impair the exercise of a constitutionally protected right to use contraceptive measures to limit their family size); Troppi, 187 N.W.2d at 513.

\(^{173}\) See Jones, 473 A.2d at 437; Burke, 551 N.E.2d at 5; Troppi, 187 N.W.2d at 518-19.

\(^{174}\) See, e.g., Troppi, 187 N.W.2d at 518-19 (stating that the trier of fact must look at factors such as family size, family income, age of the parents and marital status in determining the extent to which the birth of a child represents a benefit to his parents).

\(^{175}\) See, e.g., University of Ariz. Health Sciences Ctr., 667 P.2d at 1300; Jones, 473 A.2d at 437 (claiming the offset benefits rule reduces speculation).

\(^{176}\) See, e.g., University of Ariz. Health Sciences Ctr., 667 P.2d at 1299-1300; Jones, 473 A.2d at 437; Burke, 551 N.E.2d at 5-6 (noting that when parents undergo a sterilization to avoid transmitting a genetic defect and a healthy child is born to them, the child provides more benefit to the parents than when the parents do so to conserve family resources).
An important component of the formula used by jurisdictions applying the offset benefits rule in calculating the benefits conferred in each case is the parents' motivation for seeking sterilization.\textsuperscript{177} These courts reason that by looking at the motivation of the parents, the offset benefits view constitutes a better approach because it makes it easier to determine when a real injury exists and thus, separates the meritorious from frivolous claims.\textsuperscript{178} Offset benefits jurisdictions, although in varying degrees, focus on the parents' motivation because, depending on those reasons, the parents might be injured or benefited.\textsuperscript{179} For instance, some of these courts suggest that if a parent was sterilized in order to avoid the danger of a genetic defect, the birth of a healthy child would be a blessing and the jury could find that the parents were not injured.\textsuperscript{180} Despite this strong suggestion, most jurisdictions applying the offset benefits rule do not specifically mention in their opinions which motivations were considered more likely to trigger compensation.\textsuperscript{181} These courts favor a totality of circumstances approach, where motivation is one of many factors to be considered by the trier of fact.\textsuperscript{182} According to these courts, this approach strives for justice in all cases rather than a strict rule which produces just results in some cases and unjust results in others.\textsuperscript{183}

Another reason advanced by the jurisdictions applying the offset benefits rule is that the courts' role in the judicial system is to examine problems logically and apply the relevant legal principles, not to impose the judges' view of morality.\textsuperscript{184} These courts reason that creating a strict rule denying or allowing full recovery in wrongful conception cases is tantamount to forcing on society an individual judge's private view on the value of human life.\textsuperscript{185} Furthermore, it would take away from the jury their role in considering the basic values of human

\textsuperscript{177} See infra notes 222–326 and accompanying text.

\textsuperscript{178} See University of Ariz. Health Sciences Ctr., 667 P.2d at 1300 (responding to the criticism that the offset benefits view will permit damages where no real injury exists); Jones, 473 A.2d at 434.

\textsuperscript{179} See University of Ariz. Health Sciences Ctr., 667 P.2d at 1300; Jones, 473 A.2d at 436; Burke, 551 N.E.2d at 5.

\textsuperscript{184} See University of Ariz. Health Sciences Ctr., 667 P.2d at 1298–99; Troppi, 187 N.W.2d at 513 (emphasizing that the resolution of the case requires no intrusion into the domain of moral philosophy; it only requires the application of settled common law principles).

\textsuperscript{185} See University of Ariz. Health Sciences Ctr., 667 P.2d at 1299.
life inherent in each situation. According to these courts, it is of utmost importance that juries, not judges, consider these basic human values in calculating damages awards in wrongful conception cases because they represent a cross-section of the community and better reflect society's ethical views.

B. Criticisms of the Offset Benefits View

The majority of jurisdictions in the United States, however, do not agree with the offset benefits approach. The biggest criticism stems from the application of the benefit rule as stated in the Restatement (Second) of Torts. Judges and commentators advocating the limited recovery view argue that the benefits of having a child always outweigh the cost of raising them. Thus, according to them, the correct application of the benefit rule would preclude compensation for child-rearing expenses.

Full recovery jurisdictions, however, have interpreted the benefit rule differently. Their criticism of the offset benefits approach focuses on the “same interest limitation” of section 920, comment b of the Restatement (Second) of Torts. This limitation requires that benefits of a particular interest be used to offset interest of the same kind. In wrongful conception cases, the same interest limitation would mean using the non-pecuniary benefits conferred on the parents by the birth of the healthy child to offset the non-pecuniary damages.

186 See id.
187 See id.
188 See supra notes 100–14 and accompanying text.
189 Restatement (Second) of Torts § 920 (1977). The Restatement (Second) of Torts §920 provides “[w]hen a defendant’s tortious conduct has caused harm to the plaintiff or to his property and in so doing has conferred a special benefit to the interest of the plaintiff that was harmed, the value of the benefit conferred is considered in mitigation of damages, to the extent that it is equitable.” Id.
190 See Johnson v. University Hosp., 540 N.E.2d 1370, 1373–74, 1378 (Ohio 1989). The Johnson court stated “[i]f the concept of benefit or offset were applied to actions for wrongful pregnancy . . . benefits could be greater than damages, in which event someone could argue that the parents would owe something to the tortfeasors . . . [A] child should not be viewed as a piece of property.” Id. at 1374 (citations omitted); see University of Ariz. Health Sciences Ctr., 667 P.2d at 1301 (Gordon, J., concurring in part and dissenting in part).
191 See University of Ariz. Health Sciences Ctr., 667 P.2d at 1301 (Gordon, J., concurring in part and dissenting in part).
192 See supra notes 115–33 and accompanying text.
193 Restatement (Second) of Torts §920 cmt. b (1977). The Restatement (Second) of Torts provides that “[d]amages resulting from an invasion of one interest are not diminished by showing that another interest has benefited.” Id.
194 See id.
and the pecuniary benefits to offset the pecuniary damages. Therefore, the emotional benefits conferred on the parents should not be used to decrease the compensation for child-rearing expenses because these are two different interests.

These critics argue that most jurisdictions applying the offset benefits rule interpret this benefit rule too broadly and thus, unjustifiably reduce damages. Some proponents of the offset benefits approach do not find these arguments persuasive because to them, the economic burdens and emotional distress of raising an unplanned child are inextricably related and are basically the same interest. Other offset benefits supporters reason that since the rule is based on the notion of unjust enrichment, to strictly interpret the same interest limitation would allow unjust enrichment to occur in many cases.

Other arguments set forth by the critics of the offset benefits approach involve their assessment of public policy. They reason that because the most important function of an appellate court is to guide the common law according to public policy, courts should be extremely careful in calculating the damages in wrongful conception cases. Since there are many differences in opinion and values involved in wrongful conception cases, judges must tread cautiously, keeping the goals of the legal system and justice foremost in their minds. According to these critics, the offset benefits approach violates public policy in multiple ways. For example, these critics argue that it is impossible for a jury to place a price tag on the beneficial value of a child to his or her parents. As the court in Johnson stated, "we are not in the business of placing value on a smile or quantifying the negative impact of a temper tantrum. We cannot pretend to know

---

195 See Johnson, 540 N.E.2d at 1374; Marciniaik v. Lundborg, 450 N.W.2d 243, 248-49 (Wis. 1990).

what the future may hold—and neither can or may a jury." Another danger perceived by these critics is that the application of the benefit rule invites a trial over the emotional and psychological benefits and detriments received by the parents. This could result in the "unseemly spectacle of the parents' attempting to show how slight or nonexistent was the psychological benefit derived from the child in order to minimize the offset to their non-pecuniary benefits." As to the meaning of the judgment itself, the critics argue that a judgment for the parents under the offset benefits approach suggests that the child is not worth the effort to raise him or her. Such result offends notions of public policy.

The critics of the offset benefits approach also see analytical flaws in the way courts apply the benefits rule. Critics find that offset benefits jurisdictions are disingenuous because even though they claim their approach is better—in that they are the ones who least deviate from traditional tort law principles—they fail to apply other tort principles such as a duty to mitigate damages. Other analytical flaws are seen in the actual calculation of the cost-benefit analysis. As one commentator has suggested, the benefits approach ignores the fact that the parents in a wrongful conception case already have done this cost-benefit analysis and for that reason—that the benefits did not outweigh the burdens—sought sterilization.

It is difficult to ascertain the real impact of all these criticisms because juries usually do not itemize their damage awards and it is nearly impossible to figure out how they arrived at their calculation in

offsetting the burdens and benefits.\textsuperscript{214} There is no reliable data to analyze the practical application of the offset benefits approach. Nevertheless, one important flaw that is often overlooked in analyzing the offset benefits approach has to do with the motivational analysis used by those jurisdictions. By giving weight to the reasons why the parents sought sterilization, the courts are implying that a person’s right to contraception is legitimate only for certain reasons.\textsuperscript{215} Furthermore, courts that consider motivation deny recovery to a certain group of parents, who despite being injured by a physician’s negligence, sought sterilization for non-financial reasons.\textsuperscript{216}

### III. Different Applications of the Motivational Analysis in Offset Benefits Jurisdictions

Jurisdictions following the offset benefits rule have not applied the motivational analysis uniformly in determining child-rearing damages.\textsuperscript{217} Some jurisdictions consider the parents’ motivation for seeking sterilization to be determinative of the outcome.\textsuperscript{218} Other jurisdictions consider motivation as a factor to be considered by the jury when calculating child-rearing damages.\textsuperscript{219} Only one court using the offset benefits approach has rejected the use of a motivational analysis in calculating child-rearing damages.\textsuperscript{220} That court, however, used the offset benefits analysis only for the claims dealing with emotional distress and pain and suffering, not child-rearing damages.\textsuperscript{221}

#### A. Motivation as a Determinant—The Massachusetts Approach

The Massachusetts Supreme Judicial Court first recognized a cause of action for wrongful conception in 1990.\textsuperscript{222} Currently, Massachusetts is one of various jurisdictions espousing the offset benefits view when awarding compensation for child-rearing expenses.\textsuperscript{223}

\textsuperscript{214} See, e.g., Jones, 473 A.2d at 431 (noting that it cannot be ascertained from the jury’s award of $70,000 whether it included any money for child rearing costs or if the jury took into account the benefits conferred on the parents by the child).

\textsuperscript{215} See Lovelace Med. Ctr., 805 P.2d at 611.

\textsuperscript{216} See infra notes 222-50 and accompanying text.

\textsuperscript{217} See infra notes 222-326 and accompanying text.

\textsuperscript{218} See Burke v. Rivo, 551 N.E.2d 1, 2 (Mass. 1990).

\textsuperscript{219} See Burke v. Rivo, 551 N.E.2d 1, 2 (Mass. 1990).

\textsuperscript{220} See id.

\textsuperscript{221} See id. at 613-14.

\textsuperscript{222} See Burke v. Mendez, 805 P.2d 603, 612 (N.M. 1991).

\textsuperscript{223} See id. at 6.
Massachusetts approach, however, differs from that of the other offset benefits jurisdictions because the parents’ motivation for seeking the sterilization determines the outcome.\textsuperscript{224}

It was not until 1990, in \textit{Burke v. Rivo}, that the Massachusetts Supreme Judicial Court directly addressed a claim for wrongful conception.\textsuperscript{225} In \textit{Burke}, the court held that the parents of a healthy baby born after an unsuccessful sterilization procedure could recover damages for raising the child to adulthood.\textsuperscript{226} The \textit{Burke} court, however, held that such damages should be offset by the benefits conferred on the parents by the birth of the child.\textsuperscript{227} The mother in \textit{Burke} met with her physician to discuss her desire not to have any more children.\textsuperscript{228} She wanted to return to work, after having three children, because her family was experiencing financial difficulties.\textsuperscript{229} Her doctor suggested that she submit to a tubal ligation.\textsuperscript{230} Almost a year and a half after the tubal ligation, she became pregnant and gave birth to a healthy baby.\textsuperscript{231} The question before the court dealt only with damages because the trial judge concluded that a doctor may properly be held liable if his performance of a sterilization procedure permits conception.\textsuperscript{232}

The court relied on the case law of other jurisdictions to conclude that parents of a healthy child born as a result of a doctor’s negligence could recover damages directly associated with the birth, including emotional distress.\textsuperscript{233} The recovery of such damages was, according to the court, supported by the fact that almost every jurisdiction in the United States permits these damages.\textsuperscript{234} The court held, however, that compensation for child-rearing expenses is allowed only when the parents’ motivation for seeking sterilization is financial.\textsuperscript{235} The court reasoned that under normal tort and contract principles, child-rearing costs are reasonably foreseeable and are a natural consequence of the defendant’s negligence.\textsuperscript{236} The court determined that

\begin{footnotesize}
\begin{longtable}{l}
\end{longtable}
\end{footnotesize}
the plaintiffs should recover child-rearing costs without regard to public policy reasons (such as the psychological effect on the child when she finds out she was unwanted) or that child-rearing damages are too speculative. The court, however, implied that public policy considerations would limit the recovery of child-rearing expenses when the motivations behind the sterilization are non-financial. According to the court, the birth of a child is not always a net benefit; this is particularly true when parents undergo a sterilization procedure because they can not afford to raise another child. On the other hand, when the reasons behind sterilization are eugenic (to avoid a genetic defect) or therapeutic (to protect the mother's health), the court explained that the birth of a healthy infant is a net benefit because the child was not expected to be healthy.

The Burke dissent advocated the limited recovery rule where plaintiffs may recover immediate costs but not child-rearing expenses. The dissenting justices reasoned that it would be improper to allow recovery for child-rearing damages because a medical malpractice action for wrongful conception involves the creation of human life and is thus very different from most medical malpractice actions. According to the dissent, awarding child-rearing damages leads to improper inquiries into the value of a child to his or her parents. Furthermore, the policy of Massachusetts is to strengthen and encourage family life for the protection of children. The dissenting justices argued that the majority's holding contradicted such public policy. They also criticized the majority's assumption that parents elected sterilization for one of three reasons: (1) economic; (2) eugenic; or (3) therapeutic. The dissent noted that parents may desire sterilization for a combination of reasons not discussed by the majority.

In Massachusetts, the parents' motivation for seeking sterilization determines whether the parents will be compensated for child-rearing

expenses.248 If parents seek sterilization for financial reasons, they will be able to recover child-rearing expenses, subject to an offset benefit analysis.249 On the other hand, if the parents' reasons for undergoing sterilization are not related to financial considerations, they may not recover child-rearing expenses.250

B. Motivation Is an Implied Consideration in the Decision—The Connecticut Approach

Other jurisdictions have used motivation as an implied factor in deciding whether child-rearing damages are appropriate.251 For example, in 1982, the Supreme Court of Connecticut, in Ochs v. Borrelli, held that the parents of a child conceived after an unsuccessful sterilization procedure may recover child-rearing expenses offset by the benefits conferred on them by the child.252 In Ochs, a mother of two submitted to a tubal ligation and over a year later, she gave birth to a child.253 She and her husband sought damages from their doctor for the immediate medical expenses relating to the sterilization and the pregnancy, as well as for the pain and suffering associated with the unplanned pregnancy.254 In addition, she sought compensation for the costs relating to raising her child until the age of majority.255 The trial court instructed the jury to compensate her for all such damages including child-rearing expenses if they found the doctor negligent.256

248 See id. at 6.
249 See id.
250 See id. at 5–6.
252 See id. at 885. In Ochs, the child was born with orthopedic defects unlike children in other wrongful conception cases who are healthy. See id. at 884.

254 See id. at 884.
255 See id.
256 See Ochs, 445 A.2d at 884 n.3. The trial judge instructed:

Where the negligence of the defendant is proven, the law allows plaintiff to recover for the past and anticipated expenses of rearing the unplanned-for child, the rationale being that the new arrival should not deprive the other members of the family of what was planned as their just share of the family income . . . . [I]n considering this claim of damages, any child-rearing expenses must be reduced by the value of the benefits conferred on the parents by having the child. Such benefits may be the satisfaction, the fun, the joy, the companionship, and the like, which the plaintiffs as parents have had and will have in the rearing of the child and which make economic expenses worthwhile.

Id.
The jury returned a verdict for plaintiffs awarding damages for medical expenses, pain and suffering and child-rearing expenses. On appeal, the doctor admitted to negligence but appealed the award of child-rearing expenses on policy grounds. The doctor argued that public policy considerations dictate that the birth of a child is always a blessing and that this benefit, as a matter of law, offsets any financial burdens the parents might experience.

The Supreme Court of Connecticut affirmed the jury's verdict. The Ochs court reasoned that it does not contradict public policy to allow financial compensation for the birth of an unplanned child. According to the Ochs court, recognizing that there are substantial costs involved in raising a child does not refute the notion that there are also joys involved. As such, some compensation for child-rearing expenses is necessary because the parental pleasures do not eradicate the economic reality of the parents. The court also reasoned that a per se rule dictating that costs always outweigh the benefits would not be desirable because such determination would vary depending on the facts of each case. The court thought that using the offset benefits approach would permit a more effective and equitable case-by-case determination. The Ochs court did not consider the weighing of non-economic factors against the monetary damages as impermissibly speculative because such computations and value judgments also are made in other tort cases, such as wrongful death. Therefore, the court applied the same interest limitation of the Restatement (Second) of Torts broadly by allowing non-pecuniary interests to offset the economic injury suffered by the parents.

Although the Ochs court did not expressly indicate in its opinion whether the parents' motivation for seeking sterilization should be considered when awarding child-rearing expenses, it implied that it could be a consideration in determining whether the birth of the

child was a net benefit. The Ochs court paid a lot of attention to the mother’s considerations for undergoing a tubal ligation. The mother in Ochs had two other children who were born with mild orthopedic defects and she had a history of miscarriage and ovarian surgery. The court did not make an issue of the fact that the newborn child was not perfectly healthy because the doctor accepted responsibility for paying for the child’s orthopedic expenses. The court therefore considered that the mother, knowing about her family’s genetic history and her own health problems, had sought to avoid having more children by becoming sterilized. The Ochs court did not object to the consideration of these facts by the jury. Thus, the parents’ motivation was an implied factor used by the jury in awarding child-rearing expenses.

C. Motivation Is an Expressed Factor—The Maryland Approach

Maryland is one of at least two jurisdictions using motivation as a factor in the consideration of child-rearing damages. In 1984, the Court of Appeals of Maryland, in Jones v. Malinowski, used the offset benefits theory when it decided that a jury could award damages for child-rearing expenses reduced by the value of the benefits conferred upon the parents by the birth of the child. Jones dealt with a couple’s suit against their physician for negligently performing a tubal laparoscopy which resulted in the birth of a healthy child. The parents wanted to avoid conceiving more children because they had limited financial means and their three other children suffered from various diseases. Furthermore, all of Mrs. Malinowski’s pregnancies and deliveries had been traumatic experiences. Her first pregnancy resulted in a breech birth, her second child was born with a brain dis-

278 See id. In Jones, the plaintiff had one child with a brain disease and another with heart disease. See id.
279 See id.
ease and her third child nearly died at birth and suffered from heart problems.  

In Jones, the trial judge instructed the jury that it could consider child-rearing expenses as an element of damages because "persons have the right to limit the size of their family for whatever reason, be it for health or socio-economic reasons." The trial judge also instructed the jury to consider the "value conferred upon [the parents] in having a healthy child, such as the child's aid, comfort and society during the parents' life expectancy." The jury, in finding the doctor negligent, awarded the parents $70,000 in total damages. The jury's verdict, however, does not itemize the amounts for each type of damages claim it awards. Thus, it is impossible to determine if any of it included child-rearing costs and if it did, whether any benefits were taken into account.

The Jones court, in upholding the jury's verdict and the trial judge's damages theory, found that a plaintiff in Maryland may recover for all the natural, direct and proximate consequences of the tortious act. In addition, the court found that the benefits rule also had been applied in other civil actions in Maryland. Thus, the court reasoned that parents should be able to recover for the consequences of the negligent sterilization, including child-rearing expenses, because to preclude such recovery would be at odds with traditional tort doctrine. These costs, however, should be offset by the benefits conferred on the parents in order to permit the verdict to be based upon the facts of the specific case eliminating speculative damages.

The Jones court used the motivational analysis as a means of determining if there was any injury to the parents. The court reasoned that an appropriate assessment of damages can be made by focusing on the reasons the parents sought sterilization. If the physician's negligence impaired the interest the parents sought to
protect by the sterilization, then child-rearing damages can be compensable.292 In this way, the Jones court made motivation a factor to be taken into account when awarding child-rearing damages.293 The Jones court, however, did not make motivation a determinative factor because persons have the right to limit the size of their family for whatever reasons.294

D. Motivation Is Not a Factor—The New Mexico Approach

One jurisdiction has expressly rejected the use of motivation as a consideration for determining compensation for child-rearing expenses.295 In 1991, the Supreme Court of New Mexico, in Lovelace Medical Center v. Mendez, held that the parents of a normal, healthy child conceived as a result of a negligently performed sterilization procedure can recover the costs of raising the child from birth to adulthood.296 The Lovelace court, however, held that damages for emotional distress in this type of action were not compensable.297 In Lovelace, a mother, after having two children, decided to undergo a tubal ligation in order to limit the size of her family.298 The mother and her husband could not afford to raise another child.299 The doctor who performed the procedure, an employee of Lovelace Medical Center, only ligated one of the mother’s fallopian tubes.300 Moreover, the doctor failed to inform her that only one of her tubes had been ligated and that therefore, she was not sterile and must continue to use birth control measures.301 Because the mother was unaware of her continued fertility, she took no precautions and became pregnant.302 She gave birth to a healthy child and instituted the malpractice action against the hospital.303

The Lovelace court reasoned that the parents had suffered injuries for which they must be compensated.304 According to the court,

the injury was not, as some other courts have characterized it, the wrongful act of the doctor or the birth of the child.\textsuperscript{305} Instead, the parents were injured by the invasion of their interest to their family's financial stability and the invasion to their interest in family planning.\textsuperscript{306} The \textit{Lovelace} court reasoned that financial compensation in the form of child-rearing expenses is the appropriate method to address the parents' financial injury because it was the doctor's negligence that caused them to incur those child-rearing costs which they originally sought to avoid.\textsuperscript{307} The \textit{Lovelace} court further reasoned that an offset benefits analysis as to this financial injury only should consider financial benefits in offsetting the financial costs of raising the child.\textsuperscript{308} According to the court, this is appropriate because the rule as stated in the \textit{Restatement of Torts} only allows interests of the same kind to be offset.\textsuperscript{309} Thus, the court explained that the costs of raising the child should not be mitigated by the emotional benefits conferred on the parents by the birth of a healthy child.\textsuperscript{310} Additionally, the court explained that parents' motivation for undergoing a sterilization procedure should not be used to prevent compensation for child-rearing expenses.\textsuperscript{311} According to the \textit{Lovelace} court, a person's motivation for sterilization should not be conclusive as to whether an economic injury has occurred.\textsuperscript{312}

The \textit{Lovelace} court also reasoned that, as a result of the doctor's negligence, the parents' constitutionally protected right to contraception and family planning was violated.\textsuperscript{313} The \textit{Lovelace} court found that there were non-pecuniary harms, such as diminution of attention to their other children and emotional distress suffered by the parents, as a result of this injury to their right to family planning.\textsuperscript{314} Although the court thought that submitting those non-pecuniary injuries to an offset benefits analysis would be proper in theory, it would result in the "unseemly spectacle of the parents' attempting to prove how slight or nonexistent was the psychological benefit derived from the birth of

\end{itemize}
their child."315 According to the Lovelace court, disputes regarding the emotional benefits and emotional injuries suffered by parents are not to be litigated because they are contrary to the public policy of protecting the emotional well-being of children.316 Therefore, because the emotional benefits and harms could not be weighed against each other, the parents should not be able to recover for emotional distress and other non-pecuniary harms that were the result of the birth of a child.317 Following this reasoning, the Lovelace court emphasized that in performing the offset benefits analysis, the same interest limitation of the Restatement should be applied narrowly.318 Thus, the benefit from having a healthy child does not mitigate or offset the financial costs of child-rearing as they are different types of interests.319

The New Mexico approach to wrongful conception does not take into account the parents' motivation for undergoing a sterilization procedure.320 According to the Lovelace court, a person's original reason for undergoing sterilization is not conclusive as to whether the parents' interest in their family's financial security was injured.321 The Lovelace court provided an example where a professional woman sought sterilization for non-financial reasons.322 If the sterilization is performed negligently and she later becomes pregnant, her financial prospects might change abruptly.323 Therefore, the professional woman would be injured financially despite her original motivation.324 The Lovelace court also noted that, as a practical matter, it would be very difficult for the jury to identify the parents' motivation.325 Moreover, using a motivational analysis would encourage "after-the-fact reformulation of the parents' actual intentions."326

IV. Evaluation of the Motivational Analysis

The advantages proposed by the supporters of the motivational analysis are flawed. Those who propose the use of motivation in the assessment of child-rearing expenses claim that such analysis is necessary to avoid considering the child as the injury. According to these critics, under the traditional tort analysis requiring duty, breach of duty, proximate cause and injury, the unwanted child is viewed as the injury. As was discussed in Part III, this child-as-injury approach is what troubles most jurisdictions denying recovery for child-rearing expenses. This child-as-injury view, however, is not an appropriate articulation of the situation in wrongful conception cases. Parents do not complain because of the existence of a healthy child in their lives. Instead, parents are injured because they were not anticipating the expenses associated with rearing a child whose birth was a result of negligent medical care.

Compensation for child-rearing expenses is not for the unwanted child but "to replenish the family exchequer so that the new arrival will not deprive other members of the family [including the new child] . . . of their just share of the family income." Essentially, parents are injured because they rely on a doctor to perform a non-negligent sterilization and that was not the result. One court described the injury as the mother's continued fertility despite her desire and effort to be sterilized. It is difficult to see how the parents'
motivation for sterilization would help this analysis. Regardless of whether the parents seek sterilization for health, social or financial reasons, they are injured by the doctor in that they are the subjects of a negligent medical procedure. Motivation has nothing to do with the injury involved in wrongful conception cases, much less with seeking compensation for child-rearing expenses.

Proponents of the motivational analysis also suggest that considering the parents' motivation is helpful because it makes clear to what extent the parents were injured. According to proponents, motivation reveals the interests the parents sought to protect when they decided to undergo a sterilization procedure. By ascertaining these interests, the court is better able to determine whether those interests were injured by the subsequent birth of the child. Therefore, they reason that a motivational analysis helps to distinguish between plaintiffs who have and those who have not suffered real injury.

This motivational analysis is flawed because injury occurs only if those precise interests were damaged. For example, in a motivational analysis where a parent is sterilized in order to avoid passing on a genetic defect, the jury could easily find that the birth of a healthy child was a blessing rather than a damage. This would be the result, even though the physician was negligent and the parents were unprepared for the pregnancy. The motivational analysis reveals that since the parents sought sterilization to avoid a genetic defect and such eugenic interest was not infringed upon by the birth of a healthy child, the parents were not injured.

342 See id.

343 See id. For further discussion as to how the motivational analysis would evaluate the outcome of various hypothetical cases, see Milsteen, supra note 164, at 1190-97 and Pallelsen, supra note 162, at 376-79.
Some commentators claim that a motivational analysis is particularly helpful to offset benefits jurisdictions because it provides a more effective way to apply the same interest limitation of the benefits rule. According to these commentators, a motivational analysis leads to a better application of the benefits rule because, by specifically identifying the interests involved, the judge and the jury can discern any benefits to those interests in order to offset any damages caused to those interests. This analysis requires accepting the theory discussed above—that the injury in wrongful conception cases is the damage to the interests the parents sought to protect by submitting to the sterilization. As discussed above, it is reasonable to conclude that the injury has nothing to do with the particular motivation of the parents.

Even if one subscribes to such a theory, however, one can still see that a motivational analysis is not necessary to a proper application of the same interest limitation. The purpose of the same interest limitation is to offset benefits of the same kind with damages of the same kind. For example, if A tortiously imprisons B and B brings an action for false imprisonment claiming damages for pain, humiliation and physical harm, A cannot offset those damages by claiming that B obtained large sums of money by selling the story to newspapers. The financial benefits received by B from the false imprisonment—income from selling the story—is not an interest of the same kind as the pain, humiliation and physical harm suffered by B during the incident. Therefore, the same interest limitation as provided for in the Restatement of Torts has nothing to do with a person's motivation to perform a specific act. As demonstrated in the example above, the same interest limitation could be applied without looking at the person's motivation. This is, in fact, what some offset benefits jurisdictions have done. These courts have assessed the benefits to be offset, not by looking at the parents' motivation, but by looking at a

variety of factors such as family size, parents' age, income, etc. Most offset benefits jurisdictions have used a motivational analysis primarily for the purpose of identifying the injury and minimizing the danger of compensating plaintiffs when no real injury exists. They have not used the motivational analysis to perform the actual offset benefits calculation. The reality is that the use of a motivational analysis coupled with the same interest limitation would severely restrict the flexibility the offset benefits approach is striving to accomplish in the first place.

The motivational analysis also has some inherent weaknesses in its application. First, there are practical difficulties in determining the precise motivation behind the parents' decision not to have any more children. Second, the fact that the plaintiffs now have to prove motivation creates another hurdle to recovery even though it is already extremely difficult to prove liability in wrongful conception cases. In addition, compensating parents that seek sterilization for particular reasons discriminates against parents who were victims of the same type of negligence but who sought sterilization for other reasons. Finally, distinctions based on motivation may infringe on constitutionally protected rights to contraception and family planning.

A problem presented by this motivational analysis is the practical difficulty in determining the motivation for undergoing the sterilization procedure. Couples may decide to limit the size of their families for multiple reasons. This is particularly troublesome for jurisdictions that use motivation as the absolute determinant of the injury because it is unclear how the injury would be determined if a couple sought sterilization for a combination of reasons. Jurisdictions that

359 See infra notes 383–89 and accompanying text.
360 See Garfinkle, supra note 4, at 828; Milsteen, supra note 164, at 1196–97 (noting that although the motivational analysis discussed therein neatly segregated the motivations, they usually overlap); Pallesen, supra note 162, at 375.
361 See Troppi, 187 N.W.2d at 518.
362 See Burke, 551 N.E.2d at 5–6 (allowing recovery for financial motivations only).
use motivation as merely one factor would still face problems because it would become extremely difficult to discern if any real injury occurred—the alleged purpose of the motivational analysis.

The Michigan Court of Appeals in *Troppi v. Scarf*, acknowledged that persons seek contraception or sterilization for a variety of reasons—financial, career flexibility or health. The *Troppi* court, however, did not perceive any problem with the variety of motivations. Instead, the variety of motivations justified a flexible approach like the benefits rule. Yet, courts that have applied the offset benefits approach modeled after *Troppi* have used motivation to provide a more static compensation rule; they have not used it for flexibility reasons. Most courts applying the offset benefits rule have not addressed directly the practical problems presented when a couple seeks sterilization for multiple reasons. This leaves unresolved the situation encountered when simultaneous motivations dictate different results as to compensation of child-rearing expenses. Although one commentator has proposed a hybrid motivational analysis in order to address those situations, such approach likely would undermine the purpose of the motivational analysis—providing a more accurate and sensible way of determining damages. Furthermore, a hybrid motivational analysis likely would complicate further the current application of the offset benefits rule.

The use of parents' motivation for undergoing a sterilization procedure as a requisite for compensation for child-rearing expenses

369 For example, most of the literature seems to suggest that those parents who seek sterilization for eugenic reasons are blessed rather than injured when a healthy child is born. It is not difficult to imagine a situation where parents seek sterilization both for financial reasons and fear of transmitting a genetic disease to their offspring. The financial motivation would seem to dictate recovery for child rearing expenses and the eugenic motivation would seem to dictate no recovery for child rearing expenses. The current motivational analysis does not provide a clear solution to this situation.

370 See Milsteen, supra note 164, at 1197. Milsteen did not discuss how such a hybrid motivational analysis would work probably, the analysis would be extremely complicated for juries to apply. See id.
or even as a factor in the calculation of damages creates another barrier to recovery.\footnote{See Garfinkle, supra note 4, at 828 (noting that the requirement that plaintiffs prove that they chose sterilization for financial reasons is a very difficult burden to meet); Jerram, supra note 79, at 1663.} It is already extremely difficult to prove negligence in wrongful conception cases.\footnote{See Moore, supra note 3, at 1313; Podewils, supra note 3, at 409-11.} Adding the parents' motivation as an element unjustifiably would continue to make it harder for plaintiffs to prove their case.\footnote{See Moore, supra note 3, at 1313; Podewils, supra note 3, at 409-11.} Under a motivational analysis, parents not only have to prove the elements of medical malpractice and negligence but they have the burden to prove their motivation for seeking sterilization in order to be compensated for child-rearing expenses.\footnote{See Burke, 551 N.E.2d at 6; Garfinkle, supra note 4, at 828; Jerram, supra note 79, at 1663.} Other tort actions or even medical malpractice actions do not engage in a similar motivational analysis. The inquiry into a motivational analysis represents another deviation from traditional tort doctrine in order to artificially discount the damages.\footnote{See Podewils, supra note 3, at 424-25.} This does not correspond with the principle which drives offset benefits jurisdictions—that a wrongdoer is accountable for all damages that may have been caused by the tortious misconduct of a defendant.\footnote{See University of Ariz. Health Sciences Ctr., 667 P.2d at 1300; Jones, 473 A.2d at 435.}

The parents' motivation for undergoing a sterilization procedure should not be used as the line to determine if they should be compensated for child-rearing expenses.\footnote{See O'Shea, supra note 80, at 986-89. This article proposes a "reason for reliance" approach as the most equitable framework. See id. Such analysis however is redundant because the reason for reliance in the physician's words or assurances is already taken into account when proving the breach of duty prong of negligence analysis. See id. at 986-89; see also Milsteen, supra note 164, at 1190-97; Pallesen, supra note 162, at 376-79 (providing examples of outcomes with different motivational contexts).} This motivational analysis will not always produce the most equitable results.\footnote{See Lovelec Med. Ctr., 805 P.2d at 612.} If parents with financial motivations are the only ones able to recover child-rearing expenses, the analysis would inherently discriminate against those parents who wish to limit their family size for perfectly legitimate reasons such as preventing a disease or career choices.\footnote{See O'Shea, supra note 80, at 986-89. This article proposes a "reason for reliance" approach as the most equitable framework. See id. Such analysis however is redundant because the reason for reliance in the physician's words or assurances is already taken into account when proving the breach of duty prong of negligence analysis. See id. at 986-89; see also Milsteen, supra note 164, at 1190-97; Pallesen, supra note 162, at 376-79 (providing examples of outcomes with different motivational contexts).} Parents who seek sterilization for non-financial reasons similarly would be injured by the physician's negligence and also suffer the consequences of having to support an additional child.\footnote{See O'Shea, supra note 80, at 986-89. This article proposes a "reason for reliance" approach as the most equitable framework. See id. Such analysis however is redundant because the reason for reliance in the physician's words or assurances is already taken into account when proving the breach of duty prong of negligence analysis. See id. at 986-89; see also Milsteen, supra note 164, at 1190-97; Pallesen, supra note 162, at 376-79 (providing examples of outcomes with different motivational contexts).} Furthermore, such a strong ver-
sion of the motivational analysis seems to disregard the fact that although the parents' original intention was non-financial, they might face financial hardship later when the child is born.\textsuperscript{381} Most importantly, however, is the fact that despite a different motivation, parents wanted to avoid the costs of child-rearing since by choosing sterilization they had decided not to have any more children.\textsuperscript{382}

Motivation should not be a factor when considering awards for child-rearing expenses because consideration of motivation may infringe on the constitutionally protected rights to contraception and family planning.\textsuperscript{383} Regardless of motivation, a couple has a constitutional right to procreative autonomy.\textsuperscript{384} This interest in limiting family size was frustrated originally by a doctor's negligence.\textsuperscript{385} In fact, courts and commentators justify the recovery of child-rearing expenses because a doctor's negligence violates these rights.\textsuperscript{386} To employ a motivational analysis in assessing child-rearing damages is tantamount to disregarding a couple's constitutionally protected rights.\textsuperscript{387} The parents are deprived of their right to family planning and contraception regardless of their motivation for seeking sterilization.\textsuperscript{388} Thus, motivation has nothing to do with whether a person should recover child-rearing expenses in a wrongful conception case.\textsuperscript{389}

The motivational analysis used in offset benefits jurisdictions does not promote the overall goals of tort law—deterrence, compen-

\textsuperscript{387} See Hom, supra note 5, at 1097.
\textsuperscript{388} See Garfinkle, supra note 4, at 821; Hom, supra note 5, at 1096.
\textsuperscript{389} See Lovelace Med. Ctr., 805 P.2d at 612. Lovelace differs from other offset benefits decisions because it does not support the use of a motivational analysis. See id. Moreover, the Lovelace court allows the offset-benefits approach as to the emotional and psychological injuries suffered by the parents. See id. at 613-14. Therefore, it denies recovery for emotional distress because to them, the emotional and psychological benefits of having a healthy child does not mitigate that non-pecuniary injury. See id. The Lovelace court, however, does not apply offset benefits approach as to the financial injury and allows full recovery for child rearing expenses. See id. at 613.
sation and social welfare. Inasmuch as courts give some consideration to parents' motivation for undergoing a sterilization procedure in their damages calculation, it does not deter negligent conduct by doctors. The use of a motivational analysis works as another obstacle in finding the doctor liable for all foreseeable consequences of his or her negligent act. This does not increase the standard of care in sterilization procedures. This is particularly worrisome when we realize that, in most cases, doctors could avoid easily the negligent act by providing better post-operative care or more information to patients.

Another reason why the motivational analysis does not promote the goals of tort law is that it under-compensates a class of plaintiffs. As was discussed above, in certain situations eugenic and therapeutic motivations may be seen as less deserving of child-rearing expenses compensation even though these parents also are injured by the physician's negligence. This directly contradicts the primary purpose of a tort damages award—to restore the plaintiff to her position before the negligent act. Additionally, using motivation does not serve tort doctrine's compensatory goal because it makes it more difficult and complicated for plaintiffs to prove their damages. The motivational analysis is simply a device which reduces the potential liability of physicians for child-rearing expenses. The purpose of the offset benefits rule, ironically, is to permit compensation for child-rearing

390 See Podewils, supra note 3, at 417-19.
391 See Lovelace Med. Ctr., 805 P.2d at app. 619. But see Frank A. Sloan, Tort Liability and Obstetricians' Care Levels, 17 INT'L REV. L. & Econ. 245 (1997) (reporting that in a Florida study dealing with obstetricians' pre-natal care, tort liability limited the standard of care of obstetricians).
392 See Podewils, supra note 3, at 424-25.
393 See Moore, supra note 3, at 1329-30.
394 See Moore, supra note 3, at 1329-30; Podewils, supra note 3, at 419. Moore notes that all the physician has to do to avoid liability is meet the local fertility standard of care. See Moore, supra note 3, at 1329-30. This can be accomplished by providing better post-operative testing for fertility in vasectomy operations or better post-operative monitoring for tubal ligation cases. See id. A more simple solution, however, is to provide the patients with better information about the results of the operation. See id.
395 See Moore, supra note 3, at 1328-30; Podewils, supra note 3, at 424-25.
396 See Burke, 551 N.E.2d at 5.
397 See Podewils, supra note 3, at 407-08.
398 See Moore, supra note 3, at 1328-30; Podewils, supra note 3, at 424-25.
399 But see O'Shea, supra note 80, at 989 (noting that by instructing a jury to give weight to the purpose of the sterilization, the likelihood of under- and over-compensation is greatly reduced).
To create exceptions where certain causes of action are not bound by traditional tort principles creates uncertainty in our system of compensation for injury.\footnote{See Tryphena, 187 N.W.2d at 518-19.}

Finally, permitting courts to consider parents' motivation for seeking sterilization in calculating damages in wrongful conception cases does not promote social welfare.\footnote{See Garfinkle, supra note 4, at 830.} This may result in a child growing up ill-clothed, ill-fed and ill-educated because his or her family had to extend their financial resources beyond what they could afford.\footnote{See Moore, supra note 3, at 1330-31; Podewils, supra note 3, at 425.} Although in most cases parents will adjust to the birth of the child, there are cases where supporting an additional child can have serious financial consequences for the family.\footnote{See University of Arizona Health Sciences Center v. Superior Court, 667 P.2d at 1299; Ochs, 445 A.2d at 884 n.3.} In University of Arizona Health Sciences Center v. Superior Court, the court described an example of a husband who, after learning that he had cancer, decided to undergo a vasectomy to avoid the risk of having another child.\footnote{See id.} His wife became pregnant because the husband's doctor negligently performed the operation and a child was born shortly after the father died from cancer.\footnote{See id.} In a jurisdiction where motivation determines compensation for child-rearing expenses, the surviving parent would be denied compensation.\footnote{See id.} Even in a jurisdiction that uses motivation as one factor, this parent would have the additional burden of proving motivation and the damages might be reduced because sterilization was not sought for purely financial reasons.\footnote{See University of Ariz. Health Sciences Ctr., 667 P.2d at 1299 n.3.} Such results offend the sanctity and value of human life, the very notions used by courts to justify the existence of the wrongful conception cause of action.\footnote{See Burke, 551 N.E.2d at 5.}

**CONCLUSION**

Although some courts, in their struggle to find a balance between compensating injured plaintiffs and the public policy considerations of valuing human life, have relied on a motivational analysis, this approach does not produce the best results. As a practical matter, it is extremely difficult to identify and prove motivation for undergoing a
sterilization procedure. Trials become longer and more complicated in order to find out the exact motivation behind the parents' decision. Moreover, couples often seek sterilization for many reasons, not one. This presents the potential problem of having two motivations dictating different results.

The use of a motivational inquiry places another barrier which plaintiffs must overcome in order to recover. Wrongful conception plaintiffs must not only prove the elements of a regular medical malpractice negligence action, but also must prove their underlying motivation for undergoing a sterilization procedure.

This additional requirement is another deviation from traditional tort doctrine, making it harder for plaintiffs to recover and thus discounting child-rearing damages. That does not seem to promote the basic principles behind tort law—that a wrongdoer be accountable for all damages foreseeably caused by his act. In addition, those jurisdictions which use motivation as the determining factor for recovering child-rearing expenses unjustifiably discriminate against those parents who were not motivated by financial reasons. Motivation should not be a factor taken into consideration by courts because it has the potential of infringing on the constitutionally protected right to contraception and family planning. By limiting the recovery of child-rearing damages to certain motivations, courts are implying that other motivations are not legitimate reasons to seek sterilization. A couple has a constitutional right to contraception regardless of their motivation for doing so.

A general assessment of the motivational analysis leads to the conclusion that it does not promote the overall goals of tort law because it under-compensates plaintiffs and it does not encourage a higher standard of care for physicians. Ironically, a motivational inquiry allows some children to go through life ill-clothed, ill-fed and ill-educated even though the reason for the existence of a cause of action for wrongful conception is the preservation of families and the protection of children.
